in the specialised press (Ireland). Most reputable concert agents, radio and television companies give advance notice of visits to the United Kingdom; so do major impresarios in the Netherlands. In some countries (such as France), authors' or artistes' associations are useful sources of information on forthcoming or past performances. Advance information concerning incoming foreign entertainers may also be obtained through immigration or other Government departments (Sweden, United Kingdom), although work permits do not necessarily specify where the entertainer is to appear, nor when or how often (Sweden). As regards athletes taking part in international tournaments, another important source of information may be the national sports federations, which in the context of sanctioning the arrangements of sports events in their country, may be able to identify foreign athletes participating at such events. Finally, in some countries information will be given in advance for tax reasons (*e.g.* to obtain a reduction of withholding tax in Canada, or a "tax card" in Denmark).

23. In most countries, however, information is usually available only after the event through contacts with local tax offices (Belgium, where a local tax is levied), reports by entertainment agencies, theatres, broadcasting authorities etc. As noted earlier, the information will frequently be available too late for an effective taxation of the performer. Also, in many cases, the promoter is a non-resident, so that the possibility of obtaining information even after the event is rather slight (*cf.* Part IV).

III. ASSESSMENT AND COLLECTION OF TAX UNDER DOMESTIC LEGISLATION

24. Although countries' experience in assessing and collecting tax on artistes and athletes vary, a number of difficulties in this area have been reported. The following paragraphs briefly describe problems arising in assessing or collecting tax on non-resident and resident performers, as well as some existing counteracting measures.

A. Problems in taxing non-resident artistes and athletes

1. Dependent services

25. In some countries, tax does not have to be paid on income earned by non-residents in respect of dependent services in the country if the employer is a foreign company which does not maintain a permanent establishment in that country. This opens up wide avenues for tax avoidance, the most famous one being known as "slave agreements" with foreign employers. Other countries whose tax systems are not restricted in this way and which can tax domestic source income providing it relates to duties undertaken in that

country also find that "slave agreements" are used to negate or reduce the tax charge. Payment is made to the artistes or athletes from abroad to convert the income to an overseas source. This may remove the income from the scope of charge completely (this is, for example, the case in Australia).

26. In a typical case of a "slave agreement", the performer receives a salary from a foreign employer for services undertaken in the country of performance. There is no legal relationship between the domestic promoter of an event and the entertainer. The foreign company enters into a contract with the promoter. This provides for a lump-sum payment which represents the fee for the entertainer's appearance as well as a fee for the company for planning and organisation. This payment is usually made abroad often before the performance is given. As contracts are signed and other business is done abroad, it is not possible to contend that the company is carrying on a trade or business in the country of performance. Quite often the salary due to the performer from the company paid outside the country of performance. Many of these foreign employers are companies controlled by the performers themselves and are based in tax havens (rent-a-star companies). There are also organisations[5] which specialise in entering into employment agreements with artistes and athletes.

27. Another problem experienced by tax authorities which retain domestic taxing rights despite the interposition of a "slave company" is determining what proportion of the entertainer's salary relates to his or her performance in the country. The obvious method – time apportionment of the remuneration provided in the service agreement – is clearly open to abuse having regard to the "sham" nature of the agreement.[6]

28. When dependent services are performed directly for the domestic promoter, tax assessment raises in principle less difficulties. Artistes and athletes will frequently be subject to the PAYE or wage tax (or *précompte*) on income paid to them, and the income tax legislation may well provide for a legal liability for the person paying the remuneration (Austria, Belgium, Germany, Netherlands, for instance).[7] However, although the control problems involved are similar in nature to those arising for other dependent activities, they are increased by the itinerant character of the activities performed and the difficulty in obtaining adequate information (see Part II above) so that the usual assessment and collection instruments (*e.g.* withholding) cannot in practice be used effectively.

2. *Independent services*

29. Problems arising in taxing independent services provided by artistes and athletes are substantially similar to the problems usually met in this general area. However, they are aggravated by the mobility of the taxpayers involved,

including the case with which they may change status at will, as between dependent or independent services. Frequent changes of employers or contractors, who themselves often have a rather elusive character and are subject to more lenient reporting requirements, and the fact that they can frequently leave a country without notice, open up wide possibilities of evasion and make assessment and collection of tax problematic in the absence of any withholding tax (see paragraphs 45 to 47 below).

30. A particular problem which arises in assessing income from the self-employed where no withholding tax exists is the basis and timing of assessments. The assessment of tax on the professional income of the self-employed is established during the year after the receipt of the income and in the majority of cases, the tax would not be collectable until after the person concerned had left the country.

31. Even where a withholding tax exists on payments made to non-residents in respect of services performed in the country, some avoidance problems may arise. For example, if there is no requirement that a promoter withholds tax when the payment is to a domestic company (*e.g.* in Canada), non-resident performers will form such a company, which they will use for contracting to appear in the country, with a domestic address (generally that of a lawyer) to receive the income. The money is then deposited in a bank account in the country and immediately thereafter withdrawn by the non-resident performer.

3. *Other*

32. Business income from entertainment, artistic and sporting activities of a non-resident will usually be taxed only if a permanent establishment is maintained in the country. In some countries certain income received by artistes and athletes is considered under domestic law to be business income. Opportunities for tax avoidance or non-taxation are rather wide in this cases.[8]

33. In some cases, the entertainer's performance is "sold" to local organisers as part of a complete show. As the contract for the "package" does not refer to any particular performer and includes various types of services, the "package" may hardly be considered as performance of artistic activities. It would then avoid taxation in the country as there is no permanent establishment there.

34. Another case of possible abuse by non-residents is that relating to liability in respect of payments made for recordings. The United Kingdom noted, for example, that these are assessed to tax on the basis of "royalties" paid on sales in a year in which the performer is present in the country provided the recording was made in that country under a contract with a resident company. Liability is very easily avoided especially where the

recording is for a large multinational corporation by, for example, making the contract with a non-resident subsidiary.

B. Problems in taxing resident artistes and athletes

35. Although the taxation of resident performers raises mainly problems of enforcing existing, more general, domestic legislation, this is also an area of widespread non-compliance. Resident performers exercise, in effect, itinerant activities within the country. Problems in taxing them are, in many respects, not dissimilar to the ones arising for taxing non-residents.

36. As mentioned earlier in the report, a major administrative problem is obtaining information about the activities – combating understatement or non-disclosure of earnings and income splitting amongst controlled limited companies and ensuring that data are available to the tax authorities at the right place at the right time – artistes and athletes are notoriously dilatory about their financial affairs and there is always the danger of the tax authorities being left with an empty basket.

37. Tax authorities experience special difficulties where the legislation does not provide for withholding tax in respect of services performed by self-employed persons who are residents. Even where performers are provided by agencies, contracts are sometimes considered as "contracts for services" rather than "employment contracts" (Canada). In some countries, problems arise due to the fact that a large number of organisers are non-commercial and not taxable; they have therefore no tax interest in keeping accounts or giving information to tax authorities.

38. Tax administrations are particularly vulnerable in respect of overseas engagements and they have to rely heavily on the individual declaring the income. The entertainer's remuneration is often paid in respect of activities which are partly exercised abroad without specification of the share of remuneration which is attributable to domestic activities. Practical difficulties therefore arise as to the appropriate tax base. Furthermore, extravagant deductions for "business" expenses are frequently claimed.

39. Special mention should be made of arrangements by which resident – usually well known – performers endeavour to take themselves out of the self-employed status into a dependent one. This is in general for the purpose of accumulating income abroad, by setting up a sham company in a tax haven, or by using specialised "employer" agencies abroad and the problems discussed in paragraphs 30 and 31 above then arise.

40. However, this may also have purely domestic reasons. Canada and the United States, for example, experienced difficulties with individuals who are involved in entertainment activities and who have entered into corporate arrangements whereby they incorporate a company (usually the performer

holds the shares himself) which then contracts with the performer, as its employee, for his services. The tax advantages of such corporate arrangements lie in the fact that the corporate rate of tax is usually less than that of a high-income individual. Also, the corporation may “employ” the performer’s spouse, thus achieving a splitting of income. Certain expenses such as agent’s fees may be written-off by the corporation against the amounts received. These expenses would not be allowable to an individual as a deduction from employment income.

C. *Measures taken or under consideration*

41. The present section sets out various measures which have been tried, or are being considered, to improve compliance in the area of entertainment, artistic and sporting activities.[9] The fact that similar problems arise in different countries in taxing effectively artistes and athletes, wherever the activities are exercised, points to the necessity of having proper domestic procedures both for domestic tax purposes and for assisting other countries. This section therefore also considers some wider policy issues involved when trying to devise efficient instruments for taxing resident and non-resident artistes and athletes on the one hand, and other performers of dependent or independent services, on the other.

1. Measures mainly directed at improving compliance by residents

42. Certain countries (*e.g.* France, United Kingdom) have general powers to call for returns of payments (fees, commissions, etc.) made by residents to people not in their employment (whether resident or non-resident). Given the known low level of voluntary compliance by those in the entertainment, artistic and sporting worlds, such information is considered by these countries to be essential to combat tax avoidance and evasion. Administratively, such legislation will be more effective where machinery exists to ensure that the information reaches the tax file of the person concerned at the earliest opportunity. In the United Kingdom’s experience, these arrangements need to be backed up by monitoring new developments and the emergence of new talent with a view to taxing them before they spend their money. Moreover, a centralised approach is considered essential to ensure that they are dealt with satisfactorily, *i.e.* by bringing together all the relevant personal and associated company files. An uncoordinated action, where various offices are unaware of the whole picture, invariably proves to be less successful.

43. Another measure which has been adopted by both France and the United Kingdom is the ability to “look through” controlled overseas companies set up by residents to receive income relating to their activities, and over which they

retain control. In neither case are the provisions restricted to the entertainment and sporting fields. The French scheme, which now also applies to non-residents, is outlined in paragraphs 55 and 56 below. The United Kingdom legislation has not proved of significant practical value in this particular field although its existence does serve as a deterrent to blatant abuse.

2. *Measures concerning non-residents*

a) **Income tax provisions**

44. In the absence of special legal instruments concerning artistes and athletes (or self-employed generally), some countries (*e.g.* the United Kingdom until recently) have adopted a centralised approach to deal with the liability to tax of foreign visitors. Such an approach requires direct links between the tax office and the industry and that the tax office is kept informed of visits by major non-resident performers.

45. Most countries feel however that tax authorities need special techniques for assessing and collecting tax on artistes and athletes. In principle, an effective instrument available under domestic legislation to deal with situations where income is paid to itinerant people is withholding taxes. While they can usually be levied on income from dependent services, withholding taxes are also levied on income from independent services paid in some countries to non-residents (*e.g.* Austria, Belgium, Canada, Germany, Japan, United Kingdom). Similar techniques are used under the special "artiste taxes" referred to in paragraphs 48 to 53 below.

46. In some countries, specific rules apply to artistes and athletes. In countries where non-residents are liable to income tax only if the income is derived through a permanent establishment or a fixed base, some improvement can be made by deeming the income paid to non-resident artistes or athletes as being earnings derived from employment (Netherlands) or by providing that the taxation right can be exercised even if the performer does not maintain a permanent establishment in the country (Austria and Germany). In Portugal and Spain, non-resident artistes are subject to a 5 and 18 per cent withholding respectively. In Switzerland, income tax is levied at source on income paid to non-resident performers, according to a graduated four-band tax schedule, after deduction of expenses.

47. Considering the aim of taxing effectively income from entertainment, artistic and sporting activities in the country of performance, the Committee considers that, in the context of the general income tax, domestic legislation should ideally provide for tax to be withheld at source on payments to non-resident artistes and athletes.[10] In order to be most effective, this should apply

also where the artiste or athlete has no fixed base or is an employee of a foreign company having no permanent establishment the country. Also for the sake of effectiveness, the rate of such withholding should probably be set at a rather high level. Finally, where withholding tax is levied, the payer of the income could be held responsible for the payment of the tax (as is presently the case in Austria, Belgium, Germany, Netherlands and the United Kingdom with effect from 6th April 1987).

b) Special taxes on artistes and athletes

48. Special artiste taxes are levied instead of general income taxes Norway and Sweden on non-resident artistes and athletes performing services in these countries. The basic object of these taxes is to ensure payment of tax where the remuneration of the artiste and athlete is paid, *i.e.* at source, under a technically convenient form.[11] As they are constructed, these taxes are often considered as a tax on the organiser, which gives rise to claims for exemptions, taking the system further away from its starting, basic principles.

49. In both Norway and Sweden these taxes are final taxes and are fixed at a certain percentage of the estimated gross income derived by the performer (30 and 15 per cent in Sweden and Norway, depending upon whether the performer just takes part in a performance, or arranges it himself). These taxes, which are therefore a simplified form of, and a substitute for, ordinary income tax, are always taken as income tax for double taxation convention purposes.

50. The organiser of the event is responsible for the payment of the tax, whether or not he is the artiste or athlete. In Norway, he is also liable to file a detailed statement on the arrangement with the collecting authority, and to present contracts on request. In Sweden, a prior authorisation for the performance is necessary in most cases, but after an amendment in 1977 failure to request authorisation does not entail any fine.

51. Experience shows that in certain respects, such special taxes also are open to abuse. Detecting the activities is a major issue; especially so as work permits, which should in principle be issued prior to the performance, are not required for citizens of Nordic countries. Assessment problems arise, such as the use of foreign controlled companies and of double contracts. Finally, collection problems may also arise where, as in Norway, collection takes place only after the performance, no prepayment or security for payment being required. The combination of a low rate of tax on artistes and athletes and of the requirement that, after six months in the country, the performer is subject to ordinary income tax, opens up possibilities of evasion and creates administrative difficulties.[12]

52. A major problem, as seen in Norway and Sweden, arises from the fact that the tax is perceived as a tax on the organiser, not on the artiste or athlete. The impression prevails that the income of non-resident performers is not taxed. It is argued that the tax is an unjustified additional levy on domestic cultural activities and is inequitable because substantial exemptions are provided for in practice (in Sweden by way of tax relief for performances which form part of cultural exchanges).

53. It is noted that these provisions are under review and that suggestions have been made to improve information gathering through stronger reporting obligations (Norway), as well as assessment and collection of the tax. In Sweden, special attention is being paid to the problems connected with imposing tax on a gross remuneration without taking into account the variety of expenses attributable to different kinds of performances. Experience in these countries seems to indicate that implementing such a tax requires special care if it is to be effective. It also raises policy questions of a wider nature to which paragraphs 60 to 63 below are devoted.

3. *Counteracting the abusive use of "artiste" companies*

54. Counteracting the use of "slave" contracts with "artiste companies" is rather difficult where there is no domestic provision to "pierce" the corporate veil (*e.g.* as is the case in the Netherlands). Special measures to deal with situations like these have been taken in countries like Austria, France, Germany and the United Kingdom and some United States provisions are also of relevance. The Austrian income tax legislation provides (since 1972) that independent personal services income of non-resident artistes and athletes in respect of performances exercised in Austria is subject to withholding tax even if diverted to a third person (*e.g.* an artiste company). The recent United Kingdom provisions are similar in effect.

55. Since 1972, the French legislation contains special provisions, which are not restricted to the entertainment area, and under which income received by a person outside France as remuneration for services rendered in France by another person shall be liable to tax there under certain conditions. These provisions were originally limited in scope to income received by companies registered outside France for services performed in France or abroad by individuals resident of France if the latter had "direct or indirect control" of the companies, or when such companies have no industrial or commercial activity other than the provision of services or, in any event, where the companies were registered in a country which had no general income tax treaty with France. The wording of these 1972 provisions left to the tax administration the burden of showing that the person was a resident in

France, and investigations encountered a number of practical difficulties. The main virtue of the provision was reported to be its dissuasive aspect.

56. The French provisions were revised in 1980 to cover performers of services who are non-residents as well as residents of France, and companies as well as individuals. They apply in all cases where the person receiving the payment is situated in a low-tax country. In other cases they apply unless the performer shows that he has no control over the person, or that the latter exercises mainly an industrial or commercial activity. Finally the person receiving the remuneration is jointly responsible for the payment of the tax and the tax authorities may now collect the amounts necessary for the payment of the tax from third parties (*e.g.* organisers).

57. On 20th December 1985 a provision of the German Income Tax Law went into effect which classifies as taxable domestic income from trade or business, income derived from artistic, athletic or similar performances exercised in Germany or from their exploitation, including income derived from other services connected with these services. This applies regardless of to whom the income accrues. It is not necessary for there to be a permanent establishment or permanent representative in Germany. In addition, income tax shall be withheld from such income regardless of to whom the income accrues.

58. In the United States, the Internal Revenue Service has ruled (Revenue ruling 74.330) that where, among other things, the artiste or athlete retains control over the detained organisation of his work, an employer-employee relationship does not exist. This ruling helped defeat the improper use of a tax convention by claiming exemption under the 183-day rule. Also in the United States, foreign personal holding company provisions extend to income from the performance of certain personal service contracts. Thus a United States artiste or athlete who is a 25 per cent or more shareholder. in a foreign personal holding company cannot avoid United States tax by performing services for that entity.

59. Although experience as to the efficiency of some of these measures is still limited the Committee considers that they constitute a useful means of counteracting the use of shadow-companies within the framework of income tax legislation.[13]

4. *Some policy issues*

60. When discussing possible suggestions for improving domestic legislation generally rather far-reaching policy questions arise. Even though agreeing that taxation should in principle take place at the place of performance and that distortions in tax treatments should be avoided,

countries vary in the ways their systems are devised, which has a bearing on answers to the following two questions:

1. How far should resident and non-resident artistes and athletes be treated alike or differently?
2. How far should artistes and athletes be treated differently from other performers of dependent, or independent services?

61. On the first point, differences in treatment which exist in some countries distort competition and produce claims for a harmonised system whereby resident and non-resident artistes and athletes would be treated alike and pay the same tax. This would also eliminate all incentive to engage in tax avoidance by altering the residence status and would avoid some administrative difficulties (*e.g.* where a resident performer is a member of a non-resident band, which may be unknown to the organiser of an event). More generally, it could be argued that given the nature of the trade, and the fact that some tax problems (*e.g.* for detecting the activities) arise in both situations, a similar system should apply to residents and non-residents.

62. Setting up special systems for taxing artistes and athletes, however, necessarily divorces them from other categories of taxpayers, whether resident or non-resident. 1n some countries, it seems that this could create difficulties, even though special systems could be devised to deal with certain other categories (*e.g.* sub-contractors). There is a feeling, in these countries, that counteracting tax avoidance and evasion in this area should preferably use ways and means which would not divorce the artiste or athlete from the main categories of taxpayers to which they belong, *i.e.* providers of dependent or independent services.

63. It may be noted that, in order to avoid any differences in treatment, a withholding tax can be made to cover all the self-employed, not only self-employed artistes or athletes, or independent contractors. It could apply both to residents and non-residents. Also, as seen under French legislation, some counteracting measures in the case of dependent services (foreign "artiste company"), can be made to apply to all types of services concerned. Such more general instruments would be of use in dealing with income from other types of itinerant activities.

IV. THE INTERPRETATION AND APPLICATION OF BILATERAL DOUBLE TAXATION CONVENTIONS

A. *Introduction*

64. There are many provisions in the 1977 Model Convention which can affect the taxation of artistes and athletes. Such persons are often in the

position of receiving income of various kinds and from several sources as the circumstances in which they carry on their activities can vary widely.

65. However, the taxation of their incomes is governed essentially by the provisions of Article 17 of the Model Convention which stipulates:

1. Notwithstanding the provisions of Articles 14 and 15, income derived by a resident of a Contracting State as an entertainer, such as a theatre, motion picture, radio or television artiste, or a musician, or as an athlete, from his personal activities as such exercised in the other Contracting State may be taxed in that other state.
2. Where income in respect of personal activities exercised by an entertainer or an athlete in his capacity as such accrues not to the entertainer or athlete himself but to another person, that income may, notwithstanding the provisions of Articles 7, 14 and 15, be taxed in the Contracting State in which the activities of the entertainer or athlete are exercised.

66. The reasons for these provisions in the Model are set forth in the five paragraphs of the Commentary, on which an observation was made by Canada and the United States.

B. "Personal Scope" of Article 17

1. Definitions of "artistes" and "athletes"

67. The first issue considered was whether the terms "artistes" (as it appears in the title of Article 17), "entertainers" and "athletes" were sufficiently broad to cover all the persons it is wished to tax under Article 17.

68. As far as "artistes" are concerned, it was noted that paragraph 1 of the Article included examples of persons who would be regarded as such. However, these examples should not be considered as exhaustive. It was agreed that it was not possible to give any precise definition of "artiste", and that a wide variety of situations could arise. On the one hand, the term clearly includes the stage performer, film actor, actor (including for instance a *former* athlete) in a television commercial. Article 17 may also apply to artistes and athletes participating in activities which are of a political, social, religious or charitable nature, if an entertainment character is present. On the other hand, conference lecturers and persons interviewed on television are clearly not "artistes" in the meaning of Article 17. There is however a variety of intermediate situations where say, appearance on television or in public could generally be seen as "acting" for entertainment purposes, thereby falling under Article 17. In this grey area, it is necessary to review the overall balance of the activities of the person concerned.

69. A discussion was held on whether and how Article 17 applied to the intermediate case of the "actor/producer" (or the television presentator/producer, or the dancer/choreographer). The conclusion was that in such cases, it is necessary to look at what the individual predominantly does in the country where the performance takes place. If his activities in that country are predominantly of a performing nature, Article 17 will apply to all the resulting income he derives in that country. If, on the other hand, the performing element is a negligible part of what he does in that country, the whole of the income will fall outside Article 17. In other cases, an apportionment might be necessary.

70. As far as athletes are concerned, it was agreed that the intention was to cover sportsmen in the broad sense of the word. The term is not restricted to what are traditionally thought of as athletic events (*e.g.* running, jumping, javelin throwing). It also covers, for example, footballers, golfers, jockeys, cricketers and tennis players, as well as racing drivers.

71. Article 17 also applies to other participants in public entertainment such as billiard players, and participants in chess or bridge tournaments.

2. *Support staff, impresarios*

72. Consideration was given to whether, under the present wording of Article 17, there was some scope for covering "support" staff of artistes and athletes. There was agreement that a narrow interpretation should prevail and that both the intention and the language of Article 17 do not presently allow the taxation under Article 17 of producers, film directors, choreographers, technical staff, etc. Other Articles of the 1977 Model Convention would apply to such support staff (generally Articles 14 or 15 and in certain cases Article 7).

73. While income received by impresarios, etc. for arranging the appearance of an artiste or athlete is outside the scope of Article 17, any income they receive on behalf of the artiste or athlete does of course come within the Article.

74. It was therefore agreed that income of intermediaries could be covered only by supplementing the text of the Article, for example along the following lines:

> The rule laid down in paragraph 1 shall apply to income from the personal activities exercised, in an independent capacity or as an employee, by any person participating in the organisation or carrying out of such performances by artistes or athletes.

3. *Interpretation of the expression “personal activities”*

75. The expression “personal activities” in paragraph 1 of the Article seems to indicate that the paragraph applies to income accruing to the individual “performer”. However it is usual for orchestras, choral societies and sports teams to be incorporated. The question therefore arises as to whether only the income received by the members of the incorporated orchestra, etc. come within paragraph 1, or whether income that accrues to the company as “company earnings” is also covered by, that paragraph.

76. The conclusion reached on this question was that paragraph 1 applied to income derived directly or indirectly by an individual artiste or athlete. In some cases the income will not be paid directly in the State where the performance takes place to the individual or his impresario or agent. For example, a member of an orchestra may be paid a salary rather than receive payment for each separate performance. In this case the Contracting State where a performance takes place is entitled, under paragraph 1, to tax an appropriate proportion of the musician’s salary. Similarly, where an artiste or athlete is employed by *e.g.* a one person company, the State of source may tax an appropriate proportion of any remuneration paid to the individual. In addition, where its domestic laws “look through” such entities and treat the income as accruing directly to the individual, paragraph 1 enables the State where the performance takes place to tax income derived from appearances in its territory and accruing in the entity for the individual’s benefit, even if the income is not actually paid as remuneration to the individual (see paragraphs 85 to 93 below for the interpretation of the provisions of paragraph 2).

C. *Income covered by Article 17*

1. *Income other than remuneration accruing to artistes or athletes*

77. In view of the difficulties inherent in taxing artistes and athletes who receive a large variety of types of income from different sources, from the viewpoint of double taxation, the first question which arises concerns the scope of Article 17, *i.e.* what types of income are, or may be, subject to its provisions.

78. One possible interpretation, the narrowest, is that only income deriving directly from an exhibition – normally in public or on television, in respect of live performance or of the first transmission of a recording – of the artistes or athletes talents falls under Article 17, and all other types of income should be taxed in accordance with other relevant rules of the 1977 Model Convention. The argument advanced in support of this interpretation is that, subject to the provisions of Article 17, artistes or athletes should not in principle be taxed

differently from those in other professions, whether self-employed or in dependent employment.

79. Thus, income derived from contracts for the reproduction of an artiste's work (for example, on record, cassette or videocassette), being in the nature of a royalty, should be governed by Article 12 (*cf.* paragraph 13 of the Commentary on Article 12). Income from other independent personal services would come under Article 14. This would apply in particular to income from sponsorship and to remuneration received from commercial enterprises for using, and therefore promoting, sports equipment and clothing. As to business income not expressly mentioned in Article 17, it would come under Article 7.

80. The contrary opinion is that the links which exist between the different activities of performers, the complexity of the contracts (often so-called package deals) governing the exercise of these activities and the forms of payment received (frequently qualified as "royalties" for tax avoidance purposes) make it impossible for tax authorities to identify each of them separately, and since the payments are connected, they should all be brought within the scope of Article 17.

81. The Committee recognised that the complexity of such situations does indeed give rise to serious difficulties even though some of the problems were not specific to this area. It felt that resorting systematically to the solution proposed in paragraph 80 above would however render meaningless many of the provisions – in particular Articles 12 and 14 – dealing with other indirect income habitually received by artistes and athletes over and above monies paid as direct remuneration. Moreover, there will frequently be substantial administrative difficulties in taxing such indirect income in the country where the performance takes place, as contracts concluded with a firm in one country (for example, for advertising) will very often cover the exercise of activities throughout the world. The country where the performance takes place will frequently not be informed of the existence of such income and any apportionment of it (*e.g.* on the basis of the relation to a specific performance) would be problematic, with a risk of double taxation.

82. The Committee considered that it would not be appropriate to bring genuine royalties into the scope of Article 17. It was noted that the definition of "royalty" under Article 12 was rather restrictive and a number of countries would not consider advertising and sponsorship fees as royalty income. Countries would of course be able to check that what was described as a royalty by the taxpayer really was a royalty in the meaning of Article 12: if it were not, then Article 17 might apply.

83. It was therefore agreed that, with regard to the application of Article 17, account should be taken of the extent to which the income was connected

with the actual activity of the artiste and athlete in the country concerned. In general, Articles other than Article 17 would apply whenever there were no direct link between the income and a public exhibition by the performer in the country concerned. On the contrary, advertising or sponsoring income paid especially in connection with a performance (whether before or after the event) or a series of performances, would fall under Article 17.

84. Finally, it was agreed that compensation paid to an artiste and athlete when a performance had to be cancelled by the organiser came under Article 21 dealing with "other income". Such compensation is therefore taxable only in the artiste's or athlete's country of residence.

2. Income paid to a person other than the artiste or athlete

85. As noted in paragraph 76, paragraph 1 of the Article applies to income derived directly or indirectly by an individual artiste or athlete from his/her personal activities. In some cases, the State where the performance takes place will be in a position to tax at source at least part of such income. However, it will not always be so, *e.g.* when income has been paid by the organiser to a management company for the appearance of a group of sportsmen, or when a team, troupe. orchestra, etc. is itself constituted as a legal entity.

86. In the case of incorporated teams, orchestras etc., income for performances will normally be paid to the entity. Individual members of the team, orchestra, etc. will be liable to tax under paragraph 1, in the country in which a performance is given, on any remuneration or other income directly or indirectly accruing for their benefit as a counterpart of the performance. The question arises as to whether and how the profit made by the legal entity itself from the performance is taxable.

87. Because of the reference to "personal activities" in paragraph 1 of Article 17, the consensus was that this paragraph was not applicable to such profit of the legal entity, which raised the question whether paragraph 2 of the Article was applicable.

88. Paragraph 2 of Article 17 provides that when income in respect of personal activities exercised by an artiste or athlete "in his capacity as such" accrues to another person, that income may be taxed in the country in which the activities of the artiste or athlete are exercised. The original purpose of the provision was "to counteract certain tax avoidance "schemes" by an artiste or athlete under contract with a company which is in effect under his control. The artiste might claim exemption from tax at source under the 183-day rule, the company paying him not being taxable in the absence of a permanent establishment (see paragraph 4 of the Commentary on Article 17 of the 1 977 Model Convention).

89. The Committee found that there was nothing in the text of paragraph 2 to preclude its application to incorporated teams, troupes, etc., even though the original intention was different. It was therefore agreed that the provisions in Article 17 enabled tax to be levied on:

- The amounts paid to artistes or athletes through a separate entity, but accruing to them;
- The amounts allocated to an entity, but not paid to the artiste or athlete, which has the effect of indirectly taxing the profit element kept by the entity.

90. A few countries, however, considered that paragraph 2 should apply only in cases of abuse, especially bearing in mind the text of paragraph 4 of the commentary to Article 17.

91. The Committee noted that the legislation of some countries makes it possible to "look through" arrangements involving entities and to deem the income to be derived by the artiste or athlete: where this is so, paragraph 1 enables them to tax income resulting from such activities in their territory. Other countries cannot do this. Where a performance takes place in such a country, paragraph 2 permits such counties to impose tax on the profits directed from the income of the artiste or athlete to the entity. It may be, however, that the domestic laws of some countries do not enable them to apply such a provision. Such countries are free to agree to alternative solutions or to leave paragraph 2 out of their bilateral conventions (*cf.* paragraph 5 of the commentary).

92. Having earlier considered the application of paragraph 2 to payments made to an entity in respect of artistes' and athletes' performances where they do not control the entity or benefit from that income (see Paragraphs 89 and 91 above), the Committee agreed that there are even stronger reasons for allowing the country of source to tax the whole of the income paid to a performers own entity. The Committee also noted that similar considerations are set out in paragraph 83 above as regards the nature of the income covered by the Article also apply here.

93. In the German view the taxation of income derived by a company resident in a third country for activity exercised in Germany by artistes employed by it should take account of the legal relationship between the German organiser and that company. If there is no Double Taxation Agreement with the third country, the Federal Republic of Germany under its domestic legislation (see paragraph 57) can fully tax such income. Withholding tax is levied on gross receipts at the rate of 15 per cent. The same applies to third countries with whom there is an Agreement containing a provision corresponding to paragraph 2 of Article 17 of the OECD Model Convention.

D. *Other relevant issues*

1. *Computation of income*

94. The Committee noted that Article 17 says nothing about how the income concerned is to be computed. It is for a Contracting State's domestic law to determine the extent of any deductions for expenses. Domestic Laws differ in this area, and some provide for taxation at source at on appropriate rate based on the gross amount paid to artistes and athletes. Such rules may also apply to income paid to groups or incorporated teams, troupes, etc.

2. *Allocation issues*

95. The Committee considered whether allocation issues arising for the application of Article 17 called for special solutions. As noted earlier, only that part of the amounts paid to an incorporated troupe, orchestra, etc., which accrues to artistes and athletes from the "personal" exercise of their talents is taxable under the terms of paragraph 1. It will therefore often be difficult to determine the assessment basis for a specific performance – particularly when the members of the troupe are paid salaries by the company, receiving remuneration covering the "world-wide" activities of the troupe. Only estimates will be possible, and the tax authorities of the country of source and of the country of residence may not agree on the estimate.

96. Similar difficulties will arise for the application of paragraph 2 of the Article where it is difficult to isolate the proportion of "artistic" income *e.g.* in a lump sum payment made to a non-resident company that is attributable to service, which are recognised as not falling under Article 17.

97. The Committee recognised the difficulties involved in separating out, where necessary, "artiste income" and "income from other services", or in apportioning an artiste or an athlete's salary, or sponsoring income, in order to assess the sums taxable in the country of source. As noted earlier (*cf.* paragraph 94), the Article says nothing as to how the income concerned is to be computed and domestic laws apply. The Committee agreed that the problems involved did not differ from other "classical" allocation problems and did not call for special comments.

3. *Cultural events such as those supported from public funds*

98. The Committee noted an increasing trend in the organisation of cultural events, with related claims for tax exemption, which have sometimes led to abuse. The decision as to whether special concessions should be granted to artistes or organisers of such events should best be left to bilateral agreement between Contracting States. However it seems desirable that a standard provision be suggested for insertion in bilateral conventions. Such exemptions

should be based on clearly definable and objective criteria to ensure that they be given only where intended. Discretionary expressions such as "cultural exchange" may easily result in obscurity as to what exactly should be covered by the exemption. For instance, exemption could he limited to events specifically funded by government or where specific conditions are fulfilled (*e.g.* activities of non-profit organisations). Such a clause might read as follows:

> The provisions of paragraphs 1 and 2 shall not apply to income derived from activities performed in a Contracting State by artistes or athletes if the visit to that State is substantially supported by public funds of the other Contracting State or a political subdivision or a local authority thereof.

4. *Subsidiary right to tax for the country of residence*

99. The provisions of Article 17 could lead to double non-taxation where, on the one hand, the country of the artiste's or athlete's performance cannot exercise the taxing powers afforded it under the convention (for example, because under domestic law the income is not taxable or is specifically exempted) and, on the other hand, the country of residence applies the exemption method to relieve double taxation. This is seen as a major tax compliance issue in the countries of residence. The problem is of direct concern only to those countries of residence which apply the exemption method for relieving double taxation (either under internal law or under a convention). The problem arises not only where the income is not taxed at source; even when income is taxed in the country in which it is earned, the rate is often considerably lower than that of a progressive scale of taxation which would be applied by the country of residence. Some countries are very dissatisfied with this situation and resort to the use of the credit method in such cases.

100. The Commentary on Article 17 refers to this problem when dealing with the special case of artiste companies (in paragraph 5 of the text) and suggests as a solution, that either the credit method be used, or a subsidiary right to tax for the country of residence should be recognised. That country would be allowed to tax the income in question when this has not been done in the country where the performance takes place. The first of these solutions is also referred to in a more general context in paragraphs 32 and 47 of the Commentary on Article 23 A. In cases where a country is unable to use the credit method, it should of course adopt the second solution.

101. The Committee's conclusion on this point is that there is nothing to prevent two Contracting States from adopting one or other of these two

possible solutions in a bilateral convention. They should endeavour to do so when there is a high risk of double non-taxation, tax avoidance or evasion.

5. *Triangular cases*

102. A number of difficulties experienced by countries involve three-country situations. One case is where the artiste resides in State A, performs in State S and is employed under an exclusive “slave” contract by a “shadow company” situated in a non-treaty country B (*e.g.* a tax haven) and which supplies the entertainer’s services to a producer in State S against payment of a fee. The question then arises as to whether State S may tax remuneration in respect of the entertainer’s performance. An affirmative answer should be given to this question since Article 17 of the convention between A and S, which applies to the artiste resident in A, confers on State S the power to tax, and furthermore this power is not circumscribed by any convention between A and B.

103. In another three-country situation, the artiste is resident in a third State B, while the “shadow company” is established in State A. Even if there is a convention between A and S, the “shadow company” in State A could not argue that the remuneration paid by the producer of the performance in State S constitutes business income received without the intervention of a permanent establishment, since paragraph 7 of Article 7 stipulates that the Article does not apply to “items of income which are dealt with separately in other Articles” of the convention between A and S.

104. Consequently, it appears to matter little where the performer resides since this will either be in a State that has signed a convention with State S (where the activity is performed), under the terms of which State S has the right to tax, or else in a State which has not a convention with State S, whose right to tax therefore cannot be limited.

V. CONCLUSIONS

A. Suggested improvements in the domestic sphere

105. This survey of the difficulties encountered by tax administrations in taxing effectively artistes and athletes, as well as discussions on country experience with counteracting legislation, led the Committee to suggest some tentative recommendations. Having agreed on the principle that activities should be taxable in the country of performance, it was found that there were many instances where, for practical or legal reasons, such taxation was presently not possible or was ineffective. Improvements should therefore be looked for in the first instance in the domestic sphere. Admittedly, in providing for domestic changes, countries may have different approaches as to the proper way of dealing with resident and non-resident artistes and

athletes, or with performers and other taxpayers and these are referred to in the next section. However, the following suggestions for improvements can be offered:

a) Exemptions from tax for artistic or athletic events vary in degree among countries and depend on sovereign rights. Where they exist, however, they may lead to considerable inequalities, thereby discouraging tax compliance. Also froma technical point of view special concessions to some parts of the industry may be detrimental to the good functioning of the tax system;

b) Information: an effective and comprehensive information-gathering system is required. Setting-up specific units for this purpose would facilitate centralising the information available and communicating with foreign partners (see section B below);

c) Assessment and collection: in addition to stricter accounting and reporting obligations on organisers, withholding tax systems at fairly high levels could be set up to cover payments to self-employed artistes and athletes and persons (including, companies) providing the services of artistes and athletes. Although special taxes constitute a useful system for taxing such people, they appear to have drawbacks especially in an international context. From the investigation point of view, a centralised approach to deal with larger domestic cases or with the liability of foreign artistes and athletes is desirable.

B. Suggested improvements in the international sphere

1. Increased exchange of information

106. It emerges from country experiences that, with the exception of a few countries, little information is obtained through the exchange of information article of double taxation conventions. The Committee recommends that member countries make a more intensive use of such exchanges, either upon request, or preferably spontaneously, when tax authorities of a Contracting state come to learn that some of their residents are about to visit the other State, or when a resident of that State has performed services in the first-mentioned State. It is suggested that competent authorities could usefully issue special instructions or guidelines for dealing with exchanges of information in this area. In the absence of effective exchanges, income of artistes and athletes is likely to go very lightly taxed, or even not taxed at all when exemption is provided for in the State of performance.

107. Admittedly it may be difficult for a State to inform the other of impending visits there. However, some countries with a sophisticated (possibly centralised) information system on artistic and sporting activities

may be in a position to send such advance information. As to information which the State of residence of the performers would need for its domestic taxation, there are quite a few details the transmission of which could be agreed upon and organised: information necessary to verify the facts about the performance, the amounts paid (both remuneration and tax levied at source), the nature of the tax at source, the residence claimed by the entertainer etc. The Committee noted that in countries where special taxes existed (Norway and Sweden), these taxes were covered under bilateral conventions but exchanges of information provisions did not operate in practice, because such taxes were handled by authorities or agencies outside the ordinary tax administration, who were not familiar with exchange of information procedures under double taxation agreements. Although quick, automatic or spontaneous exchanges would be desirable, the relevant procedures are therefore difficult to establish in this case.

2. *Assistance in collection*

108. As seen when reviewing domestic aspects of taxing entertainment activities, substantial tax collection problems arise by reason of the mobility of artistes and athletes, especially for countries where artistes and athletes are taxed by assessment. Also, it is in the nature of the industry that large tax bills relating to a period of popularity and affluence sometimes arrive at a time when popularity has waned and the money gone. Some countries appear to be reasonably successful in ensuring compliance which combines a monitoring system on the movements of artistes and athletes with tax arrears together with a centralised approach to deal with such people visiting the country. In most cases, however, international co-operation is required also in this area. Countries which have, or could have, domestic powers to enforce payment of taxes levied abroad should therefore be encouraged to conclude conventions providing for assistance in the recovery of tax claims, whether bilaterally (*cf.* OECD Model) or multilaterally.

109. Finally, it should be noted that in cases where different national interpretations of the relevant provisions in double taxation agreements lead to double taxation, countries should be prepared to use the mutual agreement procedure to resolve such differences.

Notes and References

1. The first was entitled, “Trends in International Taxation: Leasing of Equipment and Hiring-out of Labour”, OECD, 1985.

2. Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Ireland, Japan, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, United Kingdom and the United States.

3. Only Switzerland reported no particular problem in this area.

4. Unreporting of income may of course happen there too (*e.g.* partial payments "off the books") but again, the same problem arises for other professions.

5. Reported to be mostly situated in Switzerland and Liechtenstein.

6. This also creates problems under double taxation conventions which are dealt with in Part IV.

7. For practical reasons, the wage tax is sometimes taken as a final tax (*e.g.* in Germany and the Netherlands).

8. Another interesting case of avoidance is the following:

   A restaurant makes a contract with a foreign company, according to which the musicians, show-stars, etc., employed by the company, perform in the restaurant. The restaurant only supplies the space and does not itself pay any performance or other fees. The foreign company receives the proceeds from the admission fees. There is a great temptation for the company to leave the proceeds undeclared in its home country.

9. Measures which exist in certain countries for counteracting general tax avoidance are *not* referred to in this Section, although they may well be of use in certain instances.

10. Problems may arise where tax is withheld only on payments to non-residents (see Canadian experience, paragraph 31 above).

11. A similar tax was imposed until 1982 in Denmark. When the period of performance exceeded 14 days, or in case of total engagement of at least one week payments to non-resident artistes were characterised as income subject to limited taxation in Denmark, and were subject to a 20 per cent gross tax it source. A recent change in jurisprudence now prevents tax authorities from levying the tax: the income is now taxable only if the artiste stays in Denmark for more than 6 months.

12. Following an increase in the rates of the special tax on entertainers in Norway from 1 January 1983 (from 10 to 20 per cent to 15 to 30 per cent on gross payments), experience suggests that an appropriate balance in tax levels has now been found, thereby reducing the speculation seen earlier in the advantages of paying special tax instead of the ordinary income tax.

13. It is also worth mentioning that measures of this kind may apply, as in the case of France, to the performance of services of any kind, not only to that of artistes and athletes.

ANNEX

ARTICLE 17

Artistes and athletes

1. Notwithstanding the provisions of Articles 14 and 15, income derived by a resident of a Contracting State as an entertainer, such as a theatre, motion picture, radio or television artiste, or a musician, or as an athlete, from his personal activities as such exercised in the other Contracting State, may be taxed in that other State.

2. Where income in respect of personal activities exercised by an entertainer or an athlete in his capacity as such accrues not to the entertainer athlete himself but to another person, that income may, notwithstanding the provisions of Articles 7, 14 and 15, be taxed in the Contracting State in which the activities the entertainer or athlete are exercised.

Commentary on Article 17 concerning the taxation of artistes and athletes

1. Paragraph 1 provides that entertainers and athletes who are residents of a Contracting State may be taxed in the other Contracting State in which their personal activities as such are performed, whether these are of an independent or of a dependent nature. This provision is an exception to the rules in Article 14 and to that in paragraph 2 of Article 15, respectively.

2. This provision makes it possible to avoid the practical difficulties which often arise in taxing entertainers and athletes performing abroad. Moreover, too strict provisions might in certain cases impede cultural exchanges. In order to overcome this disadvantage, the States concerned may, by common agreement, limit the application of paragraph 1 to independent activities by adding its provisions to those of Article 14. In such a case, entertainers and athletes performing for a salary or wages would automatically come within Article 15 and thus be entitled to the exemptions provided for in paragraph 2 of that Article.

3. The provisions of the Article do not apply when the entertainer or athlete is employed by a government and derives the income from that government. Such income is to be treated under the provisions of Article 19. Certain conventions contain provisions excluding entertainers and athletes employed in organisations which are subsidised out of pubic funds from the application of Article 1. The provisions of the Article shall not prevent

Contracting States from agreeing bilaterally on particular provisions concerning such entertainers and athletes.

4. The purpose or paragraph 2 is to counteract certain tax avoidance devices in cases where remuneration for the performance of an entertainer or athlete is not paid to the entertainer or athlete himself but to another person, *e.g.* a so-called artiste-company, in such a way that the income is taxed in the State where the activity is performed neither as personal service income to the entertainer or athlete nor as profits of the enterprise in the absence of a permanent establishment. Paragraph 2 permits the State in which the performance is given to impose a tax on the profits diverted from the income of the entertainer or athlete to the enterprise where for instance the entertainer or athlete has control over or rights to the income thus diverted or has obtained or will obtain some benefit directly or indirectly from that income. It may be, however, that the domestic laws of some States do not enable them to apply such a provision. Such States are free to agree to alternative solutions or to leave paragraph 2 out of their bilateral convention.

5. Where in the cases dealt with in paragraph 2 the exemption method for relieving double taxation is used by the State of residence of the person receiving the income, that State would be precluded from taxing such income even if the State where the activities were performed could not make use of its right to tax. It is therefore understood that the credit method should be used in such cases. The same result could be achieved by stipulating a subsidiary right to tax for the State of residence of the person receiving the income, if the State where the activities are performed cannot make use of the right conferred on it by paragraph 2. Contracting States are free to choose any of these methods in order to ensure that the income does not escape taxation.

Observation on the Commentary

6. *Canada* and the *United States* are of the opinion that paragraph 2 of the Article applies only to cases mentioned in paragraph 4 above and these countries will propose an amendment to that effect when negotiating conventions with other member countries.

Reservations on the Article

7. *Greece* and *Portugal* reserve the right to apply the provisions of Article 17, not 19, to income of government entertainers and athletes.

8. *Japan* reserves the right to apply the provisions of this Article to income derived in connection with trade or business by entertainers or athletes who are employed by the government.

9. The *United States* reserves the right to limit paragraph 1 to situations where the entertainer or athlete is present in the other State for a specified period or earns a specified amount.

Tax Treaty Override

ANNEX A. Recommendation of the Council concerning tax treaty override . . . . R(8)-13

I. THE PROBLEM

1. Double taxation agreements (tax treaties)[1] are an essential element in facilitating economic relations between States and encouraging flows of capital and labour. They form a firm and reliable basis for tax relations between States. They limit and regulate the taxing jurisdiction of the States entering into them so as to ensure the orderly application of the domestic tax laws of what are often quite different systems. Their importance is underlined by the large numbers that are currently in force and the fact that international organisations and the business community repeatedly recommend the enlargement and improvement of the treaty network.

2. The certainty that tax treaties bring to international tax matters has, in the past few years, been called into question, and to some extent undermined, by the tendency in certain States for domestic legislation to be passed or proposed which may override provisions of tax treaties. In this note, which looks at the consequences of such action by national legislatures, the term "treaty override" refers to a situation where the domestic legislation of a State overrules provisions of either a single treaty or all treaties hitherto having had effect in that State. Legislation may take the form of a provision that treaty provisions are to be disregarded in certain circumstances (*e.g.* in cases of treaty shopping or other forms of abuse). Legislation can also have the effect of overriding treaties, even where no reference is made in the legislation to treaty provisions as such, because the domestic interpretation of the effect of that legislation in relation to treaty provisions has the same effect in practice. Some hypothetical examples of treaty override are given in Section IV of this note.

3. This note proceeds to analyse treaty override from three different points of view. First, it examines the relevant rules of international and domestic law and the relationship between them. Secondly, it considers the possible legal remedies when override occurs. Thirdly, it analyses different practical cases, including the motivation for treaty override in any given situation. The note then presents the position of the Committee on Fiscal Affairs on the question and makes suggestions for action at the international and domestic levels including ways in which particular situations which States have tried to resolve by treaty override can be dealt with.

4. At the outset, however, the kind of treaty override primarily addressed in this note should be distinguished from other situations, which either involve or are similar to treaty override and may have the same effects. Three of these situations are described below and comments are made on them either below or later in this note.

a) A State may legislate to reverse the effect of a court decision which deviates from the common interpretation, explicitly accepted or

tacitly implied by the treaty partners, of a provision based on the text of the treaty. In this case, it is not considered that any injury is done to the basis of international tax relations If the competent legislative and administrative organs of the States concerned are in agreement that the court decision is contrary to their intentions. Indeed it is the Court's decision in the first place which may be seen as overriding the treaty;

b) A State may change the definition of a term used in its domestic legislation which is also used in treaty provisions but which is not specifically defined for the purposes of the treaty. In this case there is no override where the treaty contains a provision essentially similar to that embodied in Article 3, paragraph 2, of the 1977 OECD Model Double Taxation Convention which provides that, as regards the application of a treaty by a Contracting State, any term not defined in the treaty shall, unless the context otherwise requires, have the meaning which it has under the law of that State concerning the taxes to which the treaty applies. It cannot have been contemplated that, having once entered into a treaty, a State would be unable to change definitions of terms used in its domestic law provided such changes were compatible with the context of the treaty;

c) Finally, newly adopted domestic legislation may be incompatible with a treaty provision, without the competent organs intending, or even being aware of, such an effect.

5. In summary, the type of treaty override primarily addressed in this note is the enactment of domestic legislation intended by the legislature to have effects in clear contradiction to international treaty obligations.

II. THE LEGAL ANALYSIS OF TREATY OVERRIDE

i) Preliminary remarks

6. The legal effect of a treaty override has to be examined both in the light of international and of domestic law.

7. Under a treaty the Contracting States mutually undertake the obligation to respect and apply the treaty provisions. This is the principle of "*pacta sunt servanda*". Treaty override implies that a State by legislative action gives preference to domestic law over international law, and thus refuses to fulfil certain obligations arising out of the contractual nexus on grounds that the treaty obligations conflict with domestic law. When a treaty override occurs there is, therefore, a breach of the treaty. It should be noted that a breach of the treaty occurs when the overriding legislation is passed by the legislature

and not only when it is applied to actual cases. Any breach of a treaty has an effect on the international relationships of the State concerned with other States, and the rights and obligations arising out of such action have to be determined under the rules of international law.

ii) *The obligation to perform treaties under international law*

8. Tax treaties are international agreements concluded between States in written form and governed by international law. The *Vienna Convention on the Law of Treaties*, which came into force on 27th January 1980, contains the rules applicable to treaties concluded after it came into force between States that are parties to the Convention. As at 31st December 1988, 56 States were parties to it, including the following OECD member countries: Australia, Austria, Canada, Denmark, Finland, Germany, Greece, Italy, Japan, the Netherlands, New Zealand, Spain, Sweden and the United Kingdom. Luxembourg and the United States have signed, but not ratified, the Vienna Convention. As concerns States which are not parties to the Vienna Convention, or as concerns treaties concluded before its entry into force, the principles applicable are those of customary international law. However, since most of the principles embodied in the Vienna Convention have been derived from customary international law, it is the principles set out in that Convention to which this note will refer.

9. The obligation "*pacta sunt servanda*" is one of the fundamental, universally recognised principles of the law of treaties, which has been codified in the preamble and in Article 26 of the Vienna Convention, which reads as follows: "Every treaty in force is binding upon the parties to it and must be performed by them in good faith".

10. "Binding on the parties" means that the treaty is binding on the subject of international law as such, *i.e.* the State as a whole. It does not matter which organ represented the State when entering into treaty commitments, nor whether the procedure by which the State became bound involved parliamentary approval or not. The State is bound even if its consent in that respect was expressed by an organ beyond its competence or under violation of constitutional procedures, unless this violation was evident to the other parties (*cf.* Article 46 of the Vienna Convention). It "must be performed in good faith" means that international law requires States to implement the provisions of a treaty. It depends on each individual State the particularities of its constitutional and legal system, and the nature of the treaty itself how such implementation takes place. International law, however, is not concerned with the ways and means by which performance is obtained, but exclusively with the result.

11. Article 27, stressing that internal law cannot serve as justification for non-compliance with treaty obligations, reiterates a principle which might be seen as already implicit under Article 26. This can apply to the case where national legislative or administrative organs adopt measures contrary to existing treaty obligations. According to Article 27, such internal difficulties or even impossibilities may not be presented as a legally valid excuse in relations between States, *i.e.* under international law.

12. In summary, it can be said that under international law treaties have to be observed by the parties as long as they are valid, and unless they have been formally denounced. Domestic legislation (whether subsequent to signature or otherwise) or other reasons in no way affect the continuing existence of that international obligation. All other parties to a treaty are entitled to insist on compliance by a party not performing its obligations.

iii) The rank of treaty obligations under domestic law

13. Under the provisions of Article 1, the Vienna Convention has effect only *between States*. The source for rights and obligations for individuals and organs *within a State* is its domestic law. While Article 27 of the Vienna Convention does not admit provisions of domestic law as an excuse for not complying between States, it implicitly admits that conflicting domestic law may exist. This is in accordance with the two main doctrines explaining the relationship between international and domestic law: while the "dualist" doctrine believes that international and domestic law are two completely independent systems, each governing different relations and having different sources, the "moderate monist" doctrine sees international and domestic law as part of one overall system, but admits nevertheless the valid existence of domestic law in conflict with international law.

14. It depends on each State's legal system how, and at what level, international law (treaties, customary law and general principles) is given effect domestically. The level attributed to treaty obligations, as incorporated in domestic law, determines whether derogations therefrom are unconstitutional or not. In the end, the choice is between giving priority either to a State's international obligations, or to the sovereignty of decision of a country's elected representatives. "Treaty override" under domestic law can be automatically avoided if, under a State's Constitution, a higher value is attributed to a treaty obligation than to domestic law or if a State regards treaty law as "*lex specialis*" to which priority is to be given in domestic law. If treaty obligations are considered as having – at most – the same rank as that of domestic law, they may, within some national legal systems be subject to the rule "*lex posterior derogat legi priori*" (*i.e.* later law overrides prior law). However, the situation is less simple to determine in practice since this principle applies only when inconsistencies arise between the new law and

the prior law and it is well known that courts are reluctant to construe treaties as inconsistent with domestic law (and vice versa).

15. In this respect, OECD member countries find themselves in different positions. For example, Article 55 of the French Constitution of 1958 provides that treaties regularly ratified or accepted shall possess, from the moment of publication, superiority over ordinary laws.[2] A similar principle is embodied in Article 94 of the Dutch Constitution. Here, the treaty obligations prevail, also under domestic law, over any conflicting provisions of prior and posterior laws. On the other hand, the United States has chosen, in accordance with Article VI, paragraph 2, of its Constitution, to give treaty obligations equal rank with domestic law and thus to make such obligations subject to the "*lex posterior*" rule in the case of irreconcilable conflicts. In the Federal Republic of Germany Article 59, paragraph 2, of the Fundamental Law provides for the transformation of the treaty into domestic law and treaties so transformed normally have precedence over national law. In the United Kingdom domestic legislation implementing treaty obligations is subject to amendment or repeal by later legislation. Under the Constitution of Finland, treaties which may conflict with prior domestic law require approval by Act of Parliament and after such approval will have the same rank as that Act.

16. Mention should also be made in this context of the fact that many OECD member countries are also member States of the European Community. For them, European Community law adopted on the basis of the EEC Treaty, the ECSC Treaty, the EURATOM Treaty and the other Community treaties occupies a special place in the legal hierarchy. Directly applicable EC provisions are, in effect, law which operates directly in the domestic legal system and overrides conflicting domestic law. It should however be noted that the European Communities themselves, in their regulatory activities, are bound by the rules of international law.

17. If a constitutional system does not exclude the adoption of legislation contrary to the State's international obligations, this does not mean that those international obligations are considered as having no importance. If they have such power, the legislative organs must consider carefully whether or not to exercise it. In some States, the outcome of such reflexion may almost always be in favour of respecting those international obligations. In others, legislators may, in occasional cases, consider certain national interests as of such overwhelming importance that the State has no other choice but to override its treaty obligations.

18. In summary, the rank of treaty obligations depends on each State's legal system. The latter may allow for derogation, under domestic law, from those obligations. Such derogation is internally perfectly valid, and binding on a

State's organs and citizens. It does not, however, alter the obligations of the State towards other States under international law.

iv) Interpretation and application of treaties

19. The rules of interpretation embodied in Article 31 of the Vienna Convention[3] are stated in quite general terms and can be applied only on a case-by-case basis. However, some general remarks are called for:

a) First, Article 31 requires States to interpret treaties in the light of their object and purpose. Tax treaties aim primarily at the avoidance of double taxation and the prevention of fiscal evasion but also have the objective of allocating tax revenues equitably between the two Contracting States. Thus, any interpretation achieving these objectives would be preferable to one leading to double taxation or to an inappropriate double exemption. However, since double taxation is a result of taxation in two States, the interpretation of the treaty on the basis of its object and purpose requires a high degree of co-ordination between the Contracting States;

b) Secondly, the general rule of interpretation should be based on the terms of the treaty in their context. This corresponds to the approach taken in Article 3, paragraph 2, of the OECD Model Convention where the context of the treaty takes precedence over an interpretation derived from national laws. Interpretation should thus aim at a co-ordinated application in both States in order to avoid double taxation or no taxation;

c) Thirdly, in describing the context, the Vienna Convention refers to agreements, whether prior or subsequent to the treaty, as well as to practices; in the case of tax treaties, these will normally require continuous co-ordination between the tax administrations concerned.

20. All this leads to the conclusion that the interpretative process should, in the case of tax treaties, rely on the co-ordination of approaches by the tax authorities in order to achieve the main objectives, namely the avoidance of double taxation and the prevention of fiscal evasion. For this reason, a mutual agreement procedure between the tax authorities has been incorporated in tax treaties not only to solve specific cases but also to deal with any other difficulties or doubts arising as to the interpretation or application of the treaties.[4] This does not mean that treaties can be interpreted only by formal mutual agreement procedure or by negotiation, since the decisions of courts clearly have an important part to play. Coordination should nevertheless be regarded as the guiding element in the interpretative process.

III. THE REMEDIES UNDER INTERNATIONAL LAW IN CASE OF NON-COMPLIANCE BY A PARTY WITH ITS TREATY OBLIGATIONS

21. If non-compliance consists in one party enacting legislation violating treaty obligations, international law gives the other party the right to require repeal, or at least, non-application of such legislation. The first step which can and should be taken by an injured party is the filing of an official protest in writing, immediately after the government learns of the possibility of treaty override, to the government of the defaulting party stating the details of the treaty override (*i.e.*, the breach of the treaty) and insisting that it complies with its treaty obligations.

22. If this fails, a remedy for non-compliance – termination of the treaty or suspension of its operation by the other party (parties) as a consequence of the breach – is codified in Article 60 of the Vienna Convention. This Article embodies customary international law and practice. It is to be noted that the Article contains separate provisions relating to a bilateral treaty (paragraph 1) and a multilateral treaty (paragraph 2).

23. It is also important to note that the breach of a treaty by one of the parties must be a "material" one as defined in paragraph 3 of Article 60, *i.e.* consisting in the violation of a provision essential to the accomplishment of the object or purpose of the treaty. If one party is in breach of the treaty the other party may respond but only in a way which is proportionate to the breach. The Vienna Convention in fact provides for suspension in whole or in part of the treaty, thus offering various possibilities of dealing with a breach. Whether a "treaty override" by domestic legislation constitutes such a "material breach" depends on the circumstances of each case.

24. It should also be noted that the words "to invoke the breach as a ground for terminating" has been used and not the words "may terminate". Under the Convention, the injured party must follow the procedures set out in Articles 65 to 68 in order to terminate the treaty.

25. As concerns the overriding party, the so-called "*clausula rebus sic stantibus*" (concept that a fundamental change of circumstances may be invoked as a reason for terminating the treaty) may be mentioned, as it might be relied on in order to justify overriding provisions. This is dealt with in Article 62 of the Vienna Convention. However, it does not justify treaty override as such, in particular not a partial one, but only provides a basis for an extraordinary termination of the treaty as a whole. Treaty override provisions typically do not aim at a complete termination of the tax treaty. On the contrary, they aim at suspending unilaterally the operation of certain treaty provisions in one State while in the other State the treaty would remain applicable in its entirety. Moreover, the "change of circumstances" must be

determined from an objective point of view, *i.e.* a fundamental change of the situation prevailing at the time of conclusion of the treaty, and can not consist in a mere change of national policy. A treaty override, consequently, cannot normally be justified on the basis of the "*clausula rebus sic stantibus*".

26. It should be added that the provisions of Article 61, paragraph 2, on supervening impossibility of performance read as follows: "Impossibility of performance may not be invoked by a party as a ground for terminating, withdrawing from, or suspending the operation of a treaty if the impossibility is the result of a breach by that party either of an obligation under the treaty or of any other international obligation owed to any other party to the treaty."

IV. CASES OF NATIONAL TREATY OVERRIDE

27. It may be useful to give some hypothetical examples to illustrate national overriding legislation. These examples are not intended to reflect specific overriding legislation in member countries but they may bear some resemblance to actual cases.

Case 1

28. State A introduces a new withholding tax on specific items of income such as interest or royalties. State A's tax treaties provide that interest and royalties shall be exempt from tax in the State of source. For internal reasons State A legislates that the new tax will be levied, and that no refund will be provided, notwithstanding its tax treaty obligations to ensure an exemption.

29. This is an outright material breach – not simply because the unilateral action imposes a new tax, but because the effect of the new tax is material – of State A's contractual obligations which would deeply erode the confidence of the international community in State A's trustworthiness in fulfilling its obligations and even in concluding treaties.

30. The breach being a material one, the treaty partners of State A would be justified in terminating their tax treaty relationship with State A. However, termination could do even more harm economically and endanger the possibility of finding an acceptable solution in the future. Any wilful treaty override could thus have very serious implications.

Case 2

31. State B taxes gains from the alienation of immovable property. Taxpayers have found a way to avoid paying the tax by interposing, in State B, a company between themselves and the property and by selling the shares in the company rather than the immovable property itself. State B cannot tax the gain from the sale of the shares as its tax treaties follow Article 13 of the OECD

Model Convention. State B legislates that the sale of shares in any real estate company is deemed to be a sale of immovable property for the purpose of the application of its tax treaties.

32. The effect of such legislation is in contravention of State B's tax treaty obligations, even though the overriding measure is clearly designed to put an end to the improper use of its tax treaties. There may be cases where State B could successfully argue that there is such an improper use and deny the treaty benefits but this must be done under existing rules. This type of case might be the object of a mutual agreement procedure but it might also cause State B to give notice of termination[5] of its treaties (at least those with States whose tax laws are such that a double exemption would be achieved).

33. Override of the kind described in paragraph 31 above could justify termination by State B's tax treaty partners under Article 60 of the Vienna Convention. However, as in Case 1, this route may do more harm than good. Partial suspension under that Article (restricted to the provision State B is not respecting) by State B's partners might be an adequate response but it would only leave things as they are. As an alternative, partners of State B could show willingness to solve the problem by an adequate and quick revision of the treaties.

V. THE POSITION OF THE COMMITTEE ON FISCAL AFFAIRS

34. The Committee has considered the arguments that might be put forward to defend the use of overriding legislation and recognised that in a number of cases the legitimacy of the objective pursued – in particular where they aim at counteracting abuse of conventions – is well founded but the Committee remains strongly opposed to overriding legislation. Member countries have so far refrained from taking retaliatory measures (which all agree would not be conducive to better understanding in the international tax field) against overriding legislation but the Committee noted that there is growing dissatisfaction with the continued use of such legislation which could erode confidence in the international tax treaty network as a whole.

35. The Committee cannot agree that breaches of international obligations freely entered into are the proper ways to modify tax treaty obligations and feels that it is becoming urgent to concentrate on other ways to address the problems that overriding legislation aims at solving.

36. When substantial changes are introduced in domestic legislation (for example introduction of new withholding taxes or taxes on capital gains or on wealth) it is to be expected that the new domestic policy will be incorporated in the tax treaty policy of the State concerned. If there is a conflict with that

State's tax treaty obligations the only internationally acceptable way to remove the conflicting provisions is by negotiating appropriate amendments to its tax treaties, not by way of unilateral overriding legislation.

37. It might be argued that this is a long process and that some treaty partners may refuse to enter into negotiations. The Committee recognises that treaty negotiations, and renegotiations, are indeed time consuming but this is a factor which is common to all bilateral negotiations where a proper balance of advantage to both sides has to be found. Any unilateral abrogation of specific obligations destroys such balance and must be condemned. The Committee does not subscribe to the argument that member countries are unwilling to renegotiate tax treaties. A number of factors such as manpower shortages, budget limitations, or even a lack of counter-balancing proposals, might give the appearance of some unwillingness to renegotiate but all member countries are committed to avoiding double taxation and do so as evidenced by the large number of tax treaties already in force. Such unwillingness could however develop if a State repeatedly does not respect its international obligations as it would be meaningless to agree on changes which may not be respected.

38. Where, in the situation described in paragraph 4 *a)* above, a court interpretation reverses the intended effect of a specific treaty provision, or where there is abuse of tax treaties, the Committee is of the view that swift action should be taken to redress the situation. This could be achieved through domestic legislation but the State concerned should first ensure that there is a broad consensus that the intended legislation does not injure international tax relations. In the event that there is no such consensus, the Committee considers that only renegotiation of the relevant tax treaties is acceptable. The time consideration referred to above is also relevant in this case but treaty partners are likely to reach agreement more rapidly in this type of situation since the object is essentially to clarify what was already intended.

39. The Committee considers that its Working Party No. 1 on Double Taxation might be used as a forum for early consultations on any effects a member country feels are improper, for the elaboration of adequate interpretation of the treaties and for securing that there is a broad consensus that intended legislation does not injure international tax relations.

VI. SUGGESTIONS FOR ACTION

i) The Committee on Fiscal Affairs strongly urges member countries to avoid any legislation which would constitute a treaty override as defined in section I above.

ii) The motive for enacting legislation that overrides treaties can be less strong if all countries agree that they will promptly undertake bilateral or multilateral consultations to address problems connected with treaty provisions, whether arising in their own country or raised by countries with which they have tax treaties. Working Party No. I of the Committee on Fiscal Affairs is an appropriate forum for facilitating such consultation.

The Committee intends to follow developments closely in domestic legislation of member countries and publicly and forcefully to condemn any action which would constitute a breach of international obligations, including bringing such situations to the attention of the OECD Council.

Notes and References

1. This note is directed primarily at treaty override in the context of income and corporation taxes but the considerations identified in the note and the recommendations to the Council based on them have general application to the taxes and duties covered by the OECD Model Convention on Estates and Inheritances and on Gifts.
2. Subject to application by the other Party, as concerns each treaty.
3. Article 31 of the Vienna Convention reads as follows:
   1. A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose.
   2. The context for the purpose of the interpretation of a treaty shall comprise, in addition to the text, including its preamble and annexes:
      a) any agreement relating to the treaty which was made between all the parties in connection with the conclusion of the treaty;
      b) any instrument which was made by one or more parties in connection with the conclusion of the treaty and accepted by the other parties as an instrument related to the treaty.
   3. There shall be taken into account, together with the context:
      a) any subsequent agreement between the parties regarding the interpretation of the treaty or the application of its provisions;
      b) any subsequent practice in the application of the treaty which establishes the agreement of the parties regarding its interpretation;
      c) any relevant rules of international law applicable in the relations between the parties.
   4. A special meaning shall be given to a term if it is established that the parties so intended.
4. See Article 25(3) of the OECD Model Convention.
5. As provided under Article 30 of the OECD Model Convention.

ANNEX A

RECOMMENDATION OF THE COUNCIL CONCERNING TAX TREATY OVERRIDE

(adopted by the OECD Council on 2 October 1989)

THE COUNCIL,

Having regard to Article 5 b) of the Convention of the Organisation for Economic Co-operation and Development of 14th December 1960;

Having regard to the Recommendation of the Council of 11th April 1977 concerning the avoidance of double taxation;

Having regard to the Recommendation of the Council of 3rd June 1982 concerning the avoidance of double taxation with respect to taxes on estates and inheritances and on gifts;

Having regard to the report of the Committee on Fiscal Affairs of 29th June, 1989 on Tax Treaty Override;

Considering that double taxation conventions contribute to the removal of obstacles to the free movement of goods, services, capital and manpower between member countries of the OECD and that the network of conventions brings certainty into international tax matters;

Considering that such certainty has been called into question, and to some extent undermined, by the enactment of legislation which is intended to nullify unilaterally the application of international treaty obligations;

Considering that bilateral or multilateral consultations are the first course of action in dealing with problems arising from conflicts between domestic legislation and treaty provisions;

I. RECOMMENDS member countries:

1. To undertake promptly bilateral or multilateral consultations to address problems connected with tax treaty provisions, whether arising in their own country or raised by countries with which they have tax treaties;
2. To avoid enacting legislation which is intended to have effects in clear contradiction to international treaty obligations.

II. INSTRUCTS the Committee on Fiscal Affairs to follow developments in this area and to bring to the attention of the Council any action which would constitute a material breach of member countries' international treaty obligations.

The 183 Day Rule: Some Problems of Application and Interpretation

(adopted by the OECD Council on 24 October 1991)

I. INTRODUCTION

1. The international exchange of goods and services has increased substantially over the last decade. The OECD Model Convention provides relatively simple rules which were primarily designed to encourage such exchanges. The Model Convention has, however, become the object of difficulties in its application both for the taxpayers and the tax authorities. The Commentary to Article 15 of the Model Convention does not give much guidance for the resolution of those difficulties and there is therefore a need to clarify the interpretation of Article 15 in several respects but particularly as regards the way in which the 183 day period is calculated. This note reviews this question and offers suggestions as to how it should be dealt with.

II. THE 183 DAY RULE IN THE MODEL CONVENTION

A. *The rule*

2. The general rule of taxation of income from employment is embodied in the 1977 Model Convention in paragraph 1 of Article 15. According to this rule, income from employment is taxable in the State in which the employment is exercised. However, paragraph 2 of that Article contains an exception (the so-called 183 day rule) to this general rule.

3. Three conditions must be met before the exception can apply:

a) the taxpayer must not be present in the State of activity for a period or periods exceeding in the aggregate 183 days in the fiscal year concerned;

b) the remuneration must be paid by, or on behalf of, an employer who is not a resident of the State of activity, and

c) the remuneration must not be borne by a permanent establishment or a fixed base which the employer has in the State of activity.

4. The State of residence, the State of activity and the taxpayer may have divergent views on whether the State of activity has the right to tax or not. In the event of a disagreement between the tax authorities of the State of activity and the taxpayer, the latter has recourse to the mutual agreement procedure by making a request to the tax authorities of his State of residence. A mutual agreement procedure should lead to the avoidance of double taxation but in the absence of a general agreement as to the interpretation of the rules, it may end up in excessive taxation or in no taxation.

5. The use of different methods, or of the same method applied differently, is unimportant except when the State of residence and the State of activity have opposite views on whether or not the employee qualifies for the

exemption in the State of activity. The difficulties thus arise only at the margin and the Committee is conscious of the fact that the divergencies in the application of the rule are used by some simply as a planning device to obtain a double exemption. A simple solution to that problem which would solve both double taxation and double exemption problems would be to specify in the Commentary that, in the case of conflict, the State of residence would accept the calculation made by the State of activity. However, the Committee considers that such a solution may open the door to abuse and may also need to be adapted in the context of relations with non-member countries. It has consequently rejected it.

6. However, it is important, for practical reasons, to maintain this rule since, even though domestic legislation allows a number of member countries to tax any activities, however short, exercised on their territory, in practice it may not be possible to tax people working for a short duration, either because of lack of information or because the costs of collection would be exorbitant compared to the return. It is also important for the taxpayer who finds it easier to deal with only one tax system, *i.e.* that of his State of residence with which he is familiar. The State of residence should, nonetheless, be in a position to exercise its taxing right when the State of activity abandons its own right.

B. Persons to whom the 183 day rule applies

7. According to the Commentary on paragraph 2, this rule "is mainly intended to facilitate the international movement of qualified personnel, as in the case of firms which sell capital goods and are responsible for installing and assembling them abroad". The wording of paragraphs 1 and 2 of Article 15 of the Model Convention does not entirely correspond to this statement as it does not refer to "qualified personnel".

8. There is general agreement that the wording of the Commentary, which could be interpreted as a limitation, needs to be amended to remove any ambiguity as regards the meaning of "qualified personnel". It is suggested that, in line with the practice of most member countries, this could be achieved by deleting the reference to "qualified personnel" and by clearly stating that the provision applies to all individuals rendering dependent personal services (sales representatives, construction workers, engineers, etc.) unless their remuneration falls under another Article of the Convention.

C. Calculation of the 183 day period

9. The Commentary to Article 15 does not specify the way the 183 day period should be calculated. Since the rule has been in existence for several years, member countries have individually (or as a group, which is the case with the Nordic countries) defined their own way to make the calculation. Two

main methods have been designed: one which uses the actual stay in the other State (*i.e.* the number of days in the fiscal year that the taxpayer is physically present in the other State) and the other which uses the actual duration of the activity (*i.e.* the number of days that the individual has performed the activity without regard to short breaks in the taxpayer's stay which are spent at home or in a third country).

10. Member countries were asked to reply to a questionnaire on the way they calculate the period and replies have been received from all member countries. Annex I summarises the replies and an analysis of them is provided below.

i) Methods used

11. The majority of member countries (17 out of 24) use the "days of physical presence" method although, in the case of *Switzerland*, a mixed method is used, *i.e.* physical presence related to the activity. *France*, *Germany*, *Greece*, *Italy*, *Luxembourg*, the *Netherlands* and *Spain* use the "duration of the activity" method; *Belgium* also uses this method, but only in the case of conventions where Article 15 was explicitly drafted accordingly.

ii) Days included or excluded from the calculation

12. The following analysis of the replies covers both methods:

a) Part of day:

All member countries except *Austria* and *Ireland* include part of day in the calculation. Some countries do it on an hourly basis so that a part of a day is included but does not equate to a full day but this usually applies only to certain frontier workers. In addition, the *United States* exclude the time spent in the *United States*, if less then 24 hours, while in transit between two points outside the *United States*.

b) Day of arrival:

Austria and *Italy* are the only countries which exclude the day of arrival from the calculation (in the case of *Italy*, only if it is not related to the beginning of the activity).

c) Day of departure:

Austria, *Ireland* and *Italy* are the only countries which exclude the day of departure from the calculation (in the case of *Italy*, only if it is not related to the activity).

d) Saturdays and Sundays:

All member countries include Saturdays and Sundays spent inside the State of activity.

e) National holidays:

All member countries include national holidays spent inside the State of activity.

f) Holidays spent inside the State of activity:

In all the countries using the "days of physical presence" method, holidays spent inside the State of activity are, with three exceptions, always included in the calculation whether the holidays are taken before, during or after the exercising of the activities. The exceptions are *Australia*, *Austria* and *Switzerland* which exclude the holidays if they are taken either before or after exercising the activities.

As for countries using the "duration of the activity" method, the replies vary. *France* includes the holidays in all cases, provided they are related to the activities; the *Netherlands* always exclude them whenever the holidays are taken inside of the *Netherlands*; *Luxembourg* includes them if they are taken during the time the activities are exercised and has not yet decided on whether to include or exclude days of holidays taken in the country before and after exercising the activity; *Italy* and *Greece* exclude them if they are taken before or after exercising the activities and include them if taken during the activities; *Germany* includes holidays taken during or after exercising the activities but excludes them if taken before exercising the activities; finally, *Spain* includes them if they are taken before or while exercising the activities but excludes them if they are taken after the completion of the activities.

g) Holidays spent outside the State of activity:

All member countries except *Belgium*, *France*, *Germany*, *Greece*, *Luxembourg* and *Spain* exclude such days. *Italy* includes them but there is room for flexibility.

h) Short breaks (2 or 3 days):

All seven countries using the "duration of the activity" method include such short breaks in the calculation when they are taken outside the State of activity; in the other group of countries only *Belgium* and *Switzerland* follow that approach. All the other countries exclude such days. As for short breaks inside the State of activity they are included in the calculation by all member countries.

i) Days of sickness:

All of the replying countries with the exception of *Italy* and the *United States* include days of sickness in the calculation. Whilst the *United States* answer indicates that they exclude such days, their practical position is in line with that of most other countries. In an earlier submission on this question they explained that an individual is not treated as being

present on any day when, because of a medical condition that arose whilst such individual was in the *United States*, the individual is physically unable to leave. They added that the rule is interpreted narrowly, so that it applies only to people who would have left the *United States* but for their medical emergency.

Denmark, *Finland*, *Iceland*, *Norway* and *Sweden* would exclude days of sickness if they are spent outside of their respective countries. *Luxembourg* would also exclude such days if the sickness exceeds fourteen days. *France* includes them but only if they are consecutive to the activity.

Finally, the *Netherlands* include them but only to the extent they are considered as a normal interruption of work, *i.e.* if the sickness lasts no longer than one or two weeks; if it does, then those days will be excluded.

j) Death or sickness in the family:

All member countries except *Italy* include such days in the calculation (*Luxembourg* has not yet decided on its position). The observations made by *Denmark*, *Finland*, *Iceland*, *Norway* and *Sweden* and by the *Netherlands* under *i*) above are also applicable in this case.

k) Interruption because of strikes or lock-out or delays in supply:

All member countries except *Italy* (for strikes or lock-out) include such days in the calculation (*Luxembourg* has not yet decided on its position). *Italy* includes days of interruption because of delays in supplies but they could exclude them in certain cases. In line with their observation on other questions *Denmark*, *Finland*, *Iceland*, *Norway* and *Sweden* exclude these days if they are spent outside of their respective countries. *Ireland* excludes them in some cases.

iii) Comments and suggestions on the calculation of the period

13. The answers show that there is a high degree of uniformity in several respects in the calculation of the 183 day period but that there are also important divergences, in particular with respect to holidays.

14. The "days of physical presence" method is an objective test the application of which is straightforward in most countries: the individual is either physically present in a country or he is not. It is considered that days of absence could easily be documented by the taxpayers when required. It is admitted that exception could be made in special circumstances (*e.g.* people in transit or people prevented from leaving because of illness as is the practice in the *United States*) but it is generally agreed that these should be limited. A few countries, however, go beyond this practice and exclude: *Austria*, part of a day,

day of arrival, day of departure and holidays before and after the activities; *Ireland*, part of a day and day of departure; *Australia* and *Switzerland*, holidays before and after the activities.

15. The "duration of the activity" method is a more difficult concept than the one underlying the physical presence method because it is not easy to decide when an assignment begins or ends and which days should be disregarded when calculating the 183 day period. Replies to the questionnaire confirm these difficulties. There is, however, unanimous agreement on the following points: part of a day (included), Saturdays and Sundays (included), national holidays (included), short breaks outside and inside the State of activity (included) and interruptions because of delays in supplies (included).

16. The Committee considers that only the "days of physical presence" method clearly falls within the wording of Article 15 and that the use of any other method, or the use of that method with exceptions, increase the difficulties of applying the provision. Most argued that the only way to apply the method was by way of a strict interpretation, *i.e.* that no exception whatsoever should be made when a person is present in the State of activity. However, a few felt that such a rigid application could have undesirable results, *e.g.* a person otherwise exempt in the State of activity became taxable because he felt sick while in transit in that State at some other time or because he happened to have spent some holidays in that State a long time before starting his activities. It is with these considerations in mind that the Committee has reviewed the way the 183 day period should be calculated.

17. The majority of delegates felt that few exceptions should be made in the application of the method. A few felt, however, that a certain degree of reasonableness should be allowed. To ensure uniformity in the application of the 183 day rule and to avoid the problems referred to above, the Committee agreed that member countries should use only the "days of physical presence" method and that it should be calculated in the following way:

INCLUDED:

- part of a day
- day of arrival
- day of departure
- Saturdays and Sundays spent inside the State of activity
- national holidays spent inside the State of activity
- holidays spent inside the State of activity
  - before exercising the activities
  - while exercising the activities
  - after completion of the activities
- short breaks spent inside the State of activity

- days of sickness, unless they prevent the individual from leaving and he would have otherwise qualified for the exemption
- days spent inside the State of activity due to
  - death or sickness in the family
  - interruption because of strikes or lock-out
  - interruption because of delays in supplies

EXCLUDED:

- transit between two different points outside the State of activity if the individual is present in the State of activity for less than 24 hours
- holidays spent outside the State of activity
- short breaks (for whatever reason) spent outside the State of activity.

18. The adoption of this method to calculate the 183 day period requires that a number of member countries change their practice, but these countries have all indicated a willingness to do so.

D. Work concentrated in only one State

19. The exemption in the State of activity concerns, according to the Commentary, employment of a short duration abroad. This statement does not reflect the wording of the Article nor the reality because each fiscal year is treated separately. The scope of application is therefore much wider than employment of short duration. The 183 day rule may in fact be applicable to a one year stay, *e.g.* if the employee stays in the State of activity from 2 July of one year through 1 July of the next year and the fiscal year of that State is the calendar year. All member counties have confirmed that this is the case when the wording of the Model is used. The provision would even apply where an employment of more than one year does not result in a presence of more than 183 days in any year. This situation will occur especially in industries where working periods are concentrated, as is the case in the offshore oil and gas industry. It is therefore recommended that all references to “short duration” be deleted from the Commentary.

E. The proper fiscal year

20. It has been argued that the fiscal year concerned shall be understood as the fiscal year of the taxpayer. This can easily be determined if the taxpayer remains resident in the same State throughout the calendar or fiscal year but, if he changes his residence and becomes resident in the State of activity or in a third State, it may create difficulties. In practice, the fiscal year is generally understood to be the fiscal year of the State of activity. If the fiscal year of a State corresponds to the calendar year, the fiscal year concerned therefore cannot end earlier than 31 December even if the taxpayer changes his residence.

21. Paragraph 2 of Article 3 of the 1977 Model Convention reads as follows: "As regards the application of the Convention by a Contracting State any term not defined therein shall, unless the context otherwise requires, have the meaning which it has under the law of that State concerning the taxes to which the Convention applies." Thus if two Contracting States have different fiscal years, the State in which the employment is exercised can interpret the term "fiscal year" as meaning *its* fiscal year (*Norway/United Kingdom* November l, 1972, Department Finance Letter Skatte Nytt No. 12, 1972/A72-310). The State of residence could, on the same ground, argue that the proper fiscal year is its own but the context – whether an exemption should be given in the State of activity – clearly requires that it is the fiscal year of the State of activity that is concerned. The Committee recommends that this opinion be expressed in the Commentary.

F. *The residence of the employer*

22. The second condition for application of the 183 day rule requires that the employer not be a resident of the State in which the temporary employment is exercised. Some treaties, however, provide that the remuneration for the activity carried on during the employee's temporary presence must be "paid by an employer resident in the first-mentioned State", *e.g.* an employer resident in the same Contracting State as the employee. Such a provision broadens the scope of the right to tax of the State of activity. It also increases the possibility of avoiding a double exemption as stated by *Norway* in footnote 9 to Annex I. The Committee agreed that these views, which could be expressed in the Commentary as an alternative wording of this provision for exemption countries, should be considered in the context of the revision of the Model Convention.

G. *"Is not borne by a permanent establishment"*

23. The third condition for the application of the 183 day rule is that the remuneration not be borne by a permanent establishment or a fixed base which the employer has in the State in which the employment is exercised.

24. The interpretation of the term "is not borne by" raises several questions which the Committee agreed should be the subject of a thorough review at a later time.

H. *Double taxation and double exemption*

25. Double taxation or double exemption may result from the inconsistent application of the 183 day rule. Double taxation could arise in a case where the State of residence of the taxpayer does not recognise the right of the State of activity to tax but the State of activity does tax. This can happen if the two

countries use different methods for calculating the 183 day period or use the same method but with a different interpretation. It can also happen if they disagree on whether or not the remuneration is borne by a permanent establishment. In such a case, the State of residence may refuse to give a foreign tax credit on the grounds that taxation in the State of activity is not in conformity with the treaty and double taxation would remain unless other provisions in the domestic legislation (*e.g.* relief in case of hardship) are used. If the State of residence is an exemption country which exempts the foreign remuneration only if the taxpayer has been away for more than 183 days, a disagreement between the countries will also result in double taxation.

26. Double exemption can arise where the State of residence exempts the income and considers that the income should either be exempt or taxed in the State of activity and the latter considers that, in both cases, it should exempt the income. One possible way to deal with these problems would be to introduce a "subject to tax" rule in paragraph 2 of Article 15 whereby the State of activity would exempt the income only if the State of residence of the taxpayer taxes it. The Committee has not reached a conclusion on this question and intends to review the matter at a later date.

I. Conclusion

27. This note deals with some of the difficulties arising with the application of the 183 day rule and identifies a number of areas where further discussion is called for. The discussion resulted in an agreement to adopt a uniform way of calculating the period and, in order to reflect such agreement, the Committee recommends that the following changes be made to the Commentary to the Model Convention.

III. PROPOSED CHANGES TO THE COMMENTARY ON ARTICLE 15[1]

1. Paragraph 3 is deleted and replaced by the following:

> 3. Paragraph 2 contains, however, a general exception to the rule in paragraph 1. *This provision covers all individuals rendering dependent personal services (sales representatives, construction workers, engineers, etc.), to the extent that their remuneration does not fall under the provisions of other Articles, such as those applying to government services or artistes and sportsmen.*

1 Parts in italics indicate proposed changes and additions to paragraph 3 of the Commentary on Article 15 of the OECD 1977 Model Double Taxation Convention on Income and on Capital, which would be divided in new paragraphs 3 to 7.

4. The three conditions prescribed in this paragraph must be satisfied for the remuneration to qualify for the exemption. *The first condition is that* the exemption is limited to the 183 day period. It is further stipulated that this time period may not be exceeded "in the fiscal year concerned". The formulation used may create difficulties in case the fiscal years of the Contracting States do not coincide. In order to avoid these difficulties such Contracting States may prefer to use another phrasing, for instance "fiscal year of that other State" or "calendar year". *However, if paragraph 2 of Article 3 comes into play in the determination of the proper fiscal year, the context would clearly require that the fiscal year of the State of activity is the one that should prevail.*

5. *Although various formulas have been used by member countries to calculate the period there is only one way which is consistent with the wording of this paragraph: the "days of physical presence" method. The application of this method is straightforward as the individual is either present in a country or he is not. The presence could also relatively easily be documented by the taxpayer when evidence is required by the tax authorities. Under this method the following days are included in the calculation: part of a day, day of arrival, day of departure and all other days spent inside the State of activity such as Saturdays and Sundays, national holidays, holidays (see paragraph 6) before, during and after the activity, short breaks (training, strikes, lock-out, delays in supplies), days of sickness (unless they prevent the individual from leaving and he would have otherwise qualified for the exemption) and death or sickness in the family. The following days are not taken into account: transit between two different points outside the State of activity, holidays spent outside the State of activity and short breaks (for whatever reason) spent outside the State of activity.*

6. *While holidays spent inside the State of activity are normally included in the calculation, some flexibility is acceptable if the taxpayer can demonstrate to the satisfaction of the tax authorities of both Contracting States that the holidays are clearly related or not related to the activity.*

7. *The second condition is that* the employer paying the remuneration must not be a resident of the State in which the employment is exercised. *Thirdly,* should the employer have in *the* State *in which the employment is exercised* a permanent establishment (or a fixed base if he performs professional services or other activities of an independent character), the exemption is given only on condition that the remuneration is not borne by a permanent establishment or a fixed base which he has in that State. It should be noted that, *where remuneration is dealt with under a different Article of the Convention, such as Article 17, the provisions of that Article, and not of this Article, apply.*

2. Paragraphs 4 to 7 are renumbered paragraphs 8 to 11 respectively.

INC = Included. EXC = Excluded.

1. But only if there is no interrelationship between the recurrent stays in the State of activity; otherwise, there is only one continuing period in which the days spent in the State of activity are counted, the days spent outside that State are ignored.
2. These days are excluded if it is clear before arrival in the State that there was no expectation that these circumstances would occur.
3. Treaties under negotiations and new model treaty do not, since they refer to a "period or periods not exceeding in the aggregate 183 days in any twelve month period commencing or ending in the calendar year concerned".
4. If the employee spends the day in the State of activity the answer is yes and if it is outside the answer is no.
5. The answer is yes provided that the convention says that the relevant period to calculate the 183 days is the fiscal year. (If the relevant period to calculate the 183 days is any period of 12 months the answer might be no in some cases.)
6. *Luxembourg* has not yet determined its position.
7. If the sick leave does not exceed 14 days.
8. There is an exception in the treaty with *Belgium* which specifically includes "normal breaks in work" in the 183 days period.
9. Subparagraph 2 *b*) of Article 15 in the Norwegian Model Convention has this wording:

   > the remuneration is paid by, or on behalf of, an employer who is a resident of the State of which the recipient is a resident, and whose activity does not consist of the hiring out of labour; and

   According to subparagraph 2 *b*) of the OECD Model, it is sufficient for the remuneration not to be taxed in the State of activity when the employer is not a resident of that State. However, where the employee is not a resident of the same State as the employer, he will not be taxable there and there will be no obligation on the employer for the withholding of taxes. The State of residence of the employee may not even know where the employee has been working nor his salary, nor know the identity of the employer. It is doubtful whether the Article on exchange of information will work properly in these cases even if there exists a convention between all three States. Therefore, to avoid non-taxation, *Norway* finds that the best solution in these cases is to give the right to tax to the State of activity because that State is most likely to have the necessary information for a correct assessment of the salary. The reason for adding the second departing condition saying that the activity of the employer must not consist of the hiring-out of labour, is that in *Norway* a hired-out employee for tax purposes is deemed to be employed by the user of the labour. A clarification of this question is also recommended in the report concerning "Taxation issues relating to international hiring-out of labour."
10. Whilst there is an exception in the treaty with *Belgium* which uses the duration of the activity method, the period specifically includes normal breaks of work and the calendar year is used rather than the fiscal year. The calendar year is also used in the treaties with *Finland* and *Norway*.
11. *Switzerland* uses the method of "physical presence" related to the activities.
12. Although the *U.S.* generally considers a part of a day to be a "day" for purposes of satisfying the 183-day rule, an exception is made for certain commuters and for persons present in the *United States* less than 24 hours while in transit between two points outside the *United States*.

13. Provided that the duration of the sickness can be considered as a normal interruption of work which means that it lasts no longer than one or two weeks.

14. With the exception of a few treaties in which the 183 day rule is linked to a period of twelve months instead of the fiscal or calendar year.

15. This, or the other method, has no legal or administrative basis but is generally used as a guideline for tax offices. The replies may vary according to the circumstances.

16. If the day of arrival or the day of departure has no relation to the beginning or end of the activity.

17. These are generally included but there is room for flexibility.

18. Only if related to the activities.

19. Consecutive to the activities.

20. Except if otherwise provided in a tax treaty.

21. Except for three old treaties (*United States*, 1950; *United Kingdom*, 1953; and *India*, 1965) which provide that the employer must be a resident of the State of which the employee is a resident.

22. Included unless the worker can prove otherwise.

23. In recent treaties *Belgium* has insisted on a provision providing that the exemption will not be granted of the stay is of 183 days or more in any twelve month period.

24. A few treaties provide that the employer must be a resident of the same State as the employee or that the employer must either be a resident of the same State as the employee or be a permanent establishment situated in that State.

ANNEX II

RECOMMENDATION OF THE OECD COUNCIL

Concerning the Application and Interpretation of the 183 Day Rule set by the OECD Model Double Taxation Convention on Income and Capital

(adopted by the OECD Council on 24 October 1991)

THE COUNCIL,

Having regard to Article 5 b) of the Convention on the Organisation for Economic Co-operation and Development of 14th December 1960;

Having regard to the Recommendations of the Council of 11th April 1977 concerning the Avoidance of Double Taxation and of 21st September 1977 concerning Tax Avoidance and Evasion [C(77)40(Final), C(77)149(Final];

Having regard to the Report of the Committee on Fiscal Affairs of 24 January 1991 on The 183 Day Rule: Some Problems of Application and Interpretation (DAFFE/CFA(91)6/REVI);

Considering that the 1977 OECD Model Double Taxation Convention on Income and Capital (hereinafter referred to as the "Model Convention") has helped member countries to harmonise bilateral conventions on the basis of uniform principles, definitions, rules and methods, to agree on a common interpretation and to extend the existing network of such conventions;

I. RECOMMENDS that Governments of member countries, when applying existing bilateral Double Taxation Conventions on Income and Capital, follow the recommendations of the above-mentioned Report concerning the interpretation of the 183 day rule set out in paragraph 2 of Article 15 of the Model Convention and, in particular, to adopt the "days of physical presence" uniform method set out in the Report.

II. INSTRUCTS the Committee on Fiscal Affairs to modify the Commentary on paragraph 2 of Article 15 of the Model Convention as recommended in paragraph 27 of the Report, when the Model Convention is next revised.

I. INTRODUCTION

1. In recent years computerisation has become increasingly common in business and industry and one of the main issues arising from this technological explosion relates to the development and transfer of "software" across national borders. This is a major concern of the OECD, principally because trade in software is a substantial part of the total work on "trade in services". A report entitled "Software: An Emerging Industry" was published by the OECD in 1985. The report was prepared for the Committee for Information, Computer and Communications Policy by an *ad hoc* group of experts from member countries. The report discussed developments and trends in the field of software. A discussion of the cross-border taxation problems arising from this modern day phenomenon is of considerable importance. The tax issues are relatively unsettled, and for this reason the Committee felt it would be useful to analyse these questions with a view to reaching agreement on the appropriate tax treatment and in particular whether these questions can be resolved under existing provisions in double taxation conventions.

2. The major issues which this report considers are

- the commercial law and practice of member countries in relation to software rights;
- the nature of payments for software;
- the taxation treatment of software payments by member countries under their domestic law and double taxation treaties;
- the application of the Model Convention and the need for any clarification or amendment of its provisions.

II. CHARACTERISTICS OF SOFTWARE

3. Software can best be described as a programme or series of programmes containing instructions for a computer. In a technical sense, there are two kinds of software. System software is aimed at the operational process of the computer itself (*i.e.* operational software), while application software consists of programmes for using a computer to accomplish specific tasks. These purposes may be specified by a single client/user, a group of client/users, or may result from a marketing effort by the software developer.

4. In general, software is the result of ideas and concepts arising out of research and development efforts. The result is generally a programme which can be described, can be written on paper, or can be carried on a magnetic medium (tape or disc) or an optical medium (a laser disc). The transfer of software may happen through the transfer of the carrier itself or by cable or satellite.

5. Application software may consist of standard software with a wide range of applications or may be special software (tailor-made for single users or to be applied by the developer itself).

6. Both system software and application software can be an integral part of a tangible asset, *i.e.* the hardware. Examples are system software as a part of production equipment and application software for the specific use of equipment such as a word processor.

7. On the other hand, software can have an independent form – often referred to as "canned software" – which can be used by a variety of hardware (with some minor modifications for the different types of computers) and may be applied as information systems for management, consulting and administration.

III. DEVELOPMENT OF SOFTWARE

8. Software is generated by research and development with the result that R & D costs are a major part of the cost of software. The production of software can be generally described along the following lines. The first stage (R&D) constitutes planning, designing, coding and testing the concept for its adaptability into a programme. When the technical feasibility of the programme is established, a master programme is designed. In order to make the product available for release to a specific customer/user, to a specific group of users or to the market generally, the master will be customised to the extent necessary and depending on whether the programme is standard or specific, then made ready for copying and transfer.

9. Software may be developed for internal use, for use by related (foreign) companies or for sale to third parties as part of equipment, as a master copy or as copied and canned software.

10. The results of research and development projects can vary widely from development of software products with a sizeable profit potential to development of software products which either produce losses or are abandoned without any commercial exploitation. Generally one profitable product will have to compensate for the economic failures on many unproductive research efforts. Thus the royalty rates on software (as a percentage of product sales) are often higher than other, more traditional royalty arrangements (*e.g.* patents). For example a royalty rate of 25% of sales is not unusual and may even be on the low side. It is also of relevance that technical obsolescence is very rapid.

IV. TRANSFER OF SOFTWARE

11. Transfer of software can take a variety of commercial forms. Software can be transferred as a separate identifiable product ("unbundled") or transferred as a component in a hardware/software package ("bundled"). It clearly contains elements of intellectual property, and the question thus arises as to whether in conveying software, the transferor is also conveying a licence both to use and to reproduce for sale the ideas contained in the software. Arm's length commercial contracts normally cover this point by spelling out the rights conveyed and the limitations on such rights. Such limitations can have implications for income tax as well as for customs duty and sales tax.

12. Commercial contracts often involve the use of intermediaries as distributors of a finished product, or as assemblers of the elements of a finished product, with software acquired separately from the hardware. Such intermediaries can be economically independent or related.

13. Transaction involving software often grant buyers the right to subsequent improvements in the software or the right to request installation, maintenance and performance review services. Payments for these services may be separately identified, included in a gross price or form part of instalment payments. Additionally, the consideration in contracts covering software can take the form of a front-end lump sum payment, a front-end lump sum plus subsequent periodic payments based on sales (or some other measure of use) or exclusively periodic payments with no front-end payments. The fundamental economic characteristics of the arrangements may represent a transaction in goods, in services, in intellectual property, or in a combination of all three.

14. Another aspect of the subject concerns so-called service centres which are operated by independent firms, on a contract basis, to provide full-line hardware and software services to their clientele, or run payrolls, maintain inventory records, prepare financial statements, prepare plans, draft engineering drawings, monitor operations etc. These centres can also perform independent telecommunications services. Service centres can be solely operational (*i.e.*, perform services using software produced by a related or independent "software house") or they can have a considerable in-house capability for programming (*i.e.* developing their own software). They can be large or small. Large MNEs typically have their own computers and accordingly their own service centres serving a number of their constituent members. An enormous range of experiences and situations must be expected. Software driven communications and computer services are linked through service centres. They can for part of an MNE's centrally-shared services.

V. MULTINATIONAL ENTERPRISES AND SOFTWARE USE

15. MNE groups use software to control specified activities such as inventory, purchases, sales, manufacture orders, billing and payroll; to prepare financial accounts; to control day-to-day plant operations; to monitor repair and replacement of physical assets; to handle engineering and design functions; to prepare financial and market estimates etc. Many MNEs have their own computer operations including software development capability. Alternatively they can purchase software for use by their in-house computers. To produce software an MNE can buy a basic "package" and modify it with internal staff programmers to meet local conditions in each country in which the package will be used. More often, because an MNE's requirements are unique, it must develop internally the basic software package and provide adaptations of local conditions in various countries in which it operates and intends to use the software.

16. For MNEs providing a greater degree of local autonomy, local members satisfy their software needs out of local resources (internal and external) but are mindful of the need to ensure that results are compatible with the software of the other group members. Where autonomy within the MNE is less extensive, it is more common to develop and provide software from the central unit (*i.e.* the parent or service centre) of the group to the operating units in the field. The operating units may require a substantial amount of local programming to adapt software obtained from central units or from third parties.

17. Consequently, within an MNE group as a whole – and within the individual component entities – the following pattern of activities may be involved in the acquisition and exploitation of software:

1. Purchase or licence of software from a third party:
   a) resident;
   b) non-resident.
2. Creation *ab initio* or modification of acquired software by:
   a) internal staff;
   b) external service bureau or software house;
   c) individuals retained on contracts for short periods or per project.
3. Transfer of software within the group and across borders:
   a) as internal services involving
      – no charge,
      – a cost charge,
      – a specific transaction with a mark-up;

b) as capital assets with specific territorial rights and subsequent service rights;

c) by identifiable licence.

4. Maintenance and follow-up services to keep software current, which are provided:

a) cost free;

b) at cost;

c) at market price.

5. Operational services which are provided:

a) cost free;

b) at cost;

c) at market price.

18. Since software used for internal purposes frequently requires substantial time and expense to adapt to local needs, and common basic programmes have substantial "group" value (as contrasted to "individual entity" value), access to group software resources is often at low (or no) cost rather than at a "fair" cost charge that can be difficult to calculate. Additional direct costs are of course borne by the user.

19. Where MNEs utilise software as an internal control of production feature and not as a product, the transfer of software to affiliates is perceived by the business community as a service rather than as a transfer of a right to use a piece of intangible property.

VI. PRACTICE OF MEMBER COUNTRIES

20. In order to establish the taxation practices of member countries in dealing with software payments the Committee used a questionnaire which is reproduced as Annex 1. It sought information on the legal classification of software under their domestic laws, their tax practices as the country of residence of the recipient of software payments, the status of software payments in relation to their double taxation treaties and their views on whether the Model Convention required clarification or amendment. The responses to the questionnaire are summarised in Annex 2.

Legal classification

21. All OECD member countries give legal protection under domestic legislation to the intellectual property in software. In all countries except *Switzerland*, the protection is given under copyright law. In some countries protection is regarded as implicit in copyright law but there is a notable trend

for countries to make the protection statutorily explicit. There is significant variation in the extent of protection. Protection may be limited to authors producing significant or unique work. It may be extended to adaptations of existing work and sometime to adaptations by persons other than the original author.

22. For income tax purposes, member countries see no legal distinction between system software and application software nor whether software is "bundled" or "unbundled". Such distinctions may be of significance in certain countries for the purposes of turnover tax, VAT or custom duties.

Tax classification – source country

23. The purpose of this part of the questionnaire was to determine

- in which circumstances payments relating to software are classified under domestic law as a capital gains matter;
- when they are not classified as such, in which circumstances under domestic law they are treated as payments for goods or services, or royalties.

The analysis of the replies shows the following trends.

Capital payments

24. Most of the countries which replied on this point consider that it is a capital gains matter where there is an outright transfer of software implying the transfer of all rights which are attached to it. Some consider that it is also a capital gains matter where:

- hardware is acquired with built-in software;
- the payment is in the form of a lump sum and in consideration of the right to use software for a significant period (three years is most often referred to).

Royalties or payments for goods or services

25. All countries except *Switzerland*, *Norway* and the *Netherlands* have powers to impose tax at source on royalty payments. Six countries also tax payments for goods and services at source. Certain countries draw no distinction between whether a software payment is for goods or services or represents a royalty payment; some because they do not tax payments in either category, the others because they exercise rights to withholding tax in respect of both. If a distinction has to be made for example because a country has taxing rights in respect of royalties only, then the total consideration is broken down on a reasonable basis having regard to the terms of the contract which defines what is provided in return for the payments in question.

Tax classification – country of residence

26. When a resident receives a payment as consideration for transfer or all or part of the rights attached to software, the tax treatment of the receipt reflects the underlying nature of the transaction in most countries. The receipt is treated as business revenue if the rights transferred are comparable to inventory. Receipts are generally treated as a capital gains matter where the rights transferred are in the nature of fixed assets. Some countries also regard as a capital gains matter lump sum receipts or receipts in return for the grant of an exclusive right of use or of a right of use for a specific number of years (for example three years).

27. For many countries the question of whether income relates to goods and services or represents a royalty is of no relevance to its tax treatment. For countries where a distinction is necessary the income is broken down on a reasonable basis having regard to the particular terms of the contract.

28. When the payments have been taxed in the source country, the country of residence applies its domestic laws which may or may not prevent double taxation. No country has special provisions for software.

Double taxation conventions

29. There are differences between member countries regarding the classification of "capital" payments relating to software. Some are of the opinion that these payments come under Article 12, for example when they relate to the use of software; others think that Articles 7, 13 or 14 might apply depending on the facts of the particular case. In most countries, software payments that are not regarded as a capital gains matter may fall to be dealt with under Article 12 or Articles 7 or 14, depending on the facts.

30. Where payments comprise elements for both goods and services and for royalties, a majority are in favour of applying Article 12 of the Model Convention solely to the royalties element. *Greece* and *Australia* consider that Article 12 normally applies to the whole of the payment.

31. In their bilateral negotiations, few countries aim to adopt Article 12 of the Model Convention in its entirety. Variations mainly consist in introducing additional items in the definition of royalties or in providing for the application of withholding tax. Only *France* has specifically referred to software in recent conventions.

32. In cases where a party to a convention has exercised rights of taxation in respect of software payments, classifying them in a different way from the domestic law of the recipient's country, the latter country will generally grant double taxation relief or seek a mutual agreement with the source country in accordance with Article 25.

33. Three countries are of the opinion that the text of Article 12 of the Model Convention ought to be amended. *Italy* and *Luxembourg* propose that the term software should be specifically mentioned in the text. *France* suggests that software should be dealt with in the same way as cinematograph films, namely by referring to the "product" (the software) and not the rights attached to the "product", whether these rights are copyrights or rights of another kind. Other countries think either that no amendments should be made to the Model Convention or that it would be sufficient to include clarification in the Commentary on Article 12 (and if necessary on Articles 7, 13 and 14) regarding the tax treatment of software.

VII. THE APPLICATION OF THE MODEL CONVENTION

34. The Articles of the OECD Model Double Taxation Convention which may be relevant to the tax treatment of software are:

- Article 7 (Business Profits);
- Article 12 (Royalties);
- Article 13 (Capital Gains);
- Article 14 (Independent Personal Services).

35. The tax treatment applying to payments between residents of two countries poses no problems when those countries have concluded a double taxation convention which conforms in all respects to Article 12 of the Model Convention, which does not allow for withholding tax on royalties in the source State. Suppose that payments are made by an enterprise of State S (the State of source) in favour of an enterprise of State R (the State of residence). State S will only be able to exercise taxing rights in respect of the payments if the enterprise of State R has a permanent establishment in State S and if the software which gives rise to the payments is/was effectively connected with such a permanent establishment. Otherwise taxation is solely a matter for State R.

36. The definition of "royalties" in paragraph 2 of Article 12 includes among others payments of any kind made for:

a) the use of or the right to use any copyright of literary, artistic or scientific work;

b) the use or the right to use industrial, commercial or scientific equipment;

c) information concerning industrial, commercial or scientific experience.

37. The Commentary on Article 12 specifies in particular that

- as regards copyright, the definition applies whether or not that right has been or is required to be registered in a public register;
- as regards equipment, a distinction must be made between royalties paid for the use of equipment (which fall under Article 12) and payments constituting consideration for the sale of equipment (which depending on the case fall under Articles 7, 13, 14 or 21).

However, in the report entitled "The Taxation of Income Derived from the Leasing of Industrial, Commercial or Scientific Equipment" (published in 1985 under the title "Trends in International Taxation") the Committee recommended not including under the definition of "royalties" income derived from the leasing on industrial, commercial or scientific equipment where a convention provides for the taxation of royalties in the source State.

VIII. PROBLEMS RELATING TO SOFTWARE PAYMENTS

Problems described

38. Many bilateral treaties between member countries maintain a limited rate of tax at source on royalties generally or on particular types of royalties. Twelve countries have indeed entered a reservation against the zero rate provided in Article 12. As bilateral treaties which provide for tax at source on royalties usually adopt the full definition of royalties in paragraph 2 of Article 12, a number of countries exercise taxing rights at source on many types of software payments on the grounds that they represent royalties.

39. Source taxation of software payments raises questions of principles and of practical application. As regards the latter, it is necessary to determine

- which of the various types of payments relating to software represent royalties;
- how payments effected under mixed contracts are to be dealt with.

Analysis

40. The Committee examined whether it was in principle appropriate to regard software payments as within Article 12. It took into account the following:

a) Article 12 recommends a zero rate of tax on royalties with the intention of protecting royalties from taxation in the State of source except to the limited extent provided by paragraph 3 of Article 12.

b) Taxation of royalties at source may lead to taxation on a gross basis which disregards the expenses incurred by the payee in earning the royalties. In some cases this may result in unrelieved double taxation

when the State of residence is unable to credit fully the tax withheld at source because it taxes the royalties on a net basis.

c) Taxation on a gross basis occurs only in the absence of a permanent establishment; if a royalty is effectively connected with a permanent establishment, the effect of Article 7 together with paragraph 3 of Article 12 is to ensure taxation on a net basis. Paradoxically the less the connection of the payee with the State of source, the greater his tax burden there.

The Committee noted that nevertheless within OECD there was near unanimity in affording protection to software rights under copyright law. It concluded from this that software payments made for the right to exploit intellectual property in software could not be separated from copyright royalties generally. It was not able to recommend that software payments should be regarded as entirely outside the scope of Article 12. There are, however, difficulties in applying the copyright provisions of Article 12 to software royalties since paragraph 2 of the Article requires that software should be classified as a literary, artistic or scientific work. None of these categories seems entirely apt, but treatment as a scientific work might be the most realistic approach. Countries for which it is not possible to attach software to any of those categories might be justified in adopting in their bilateral treaties an amended version of paragraph 2 of Article 12 which either omits all references to the nature of copyrights or refers specifically to software.

41. The Committee also examined the question of the boundary between software payments in the nature of royalties and software payments of other kinds – a problem which gives rise to considerable difficulties.

First hypothesis: partial transfer of rights

42. The first hypothesis is that of payments made in circumstances where less than the full rights to software are transferred. Some countries argued that payments made in consideration of a partial transfer of intangible rights attached to software were within the broad scope of the definition in Article 12 even when the leasing of equipment is excluded. They considered that it was not appropriate to distinguish according to whether:

- a single payment or payments spread over a period of time are involved;
- the rights of use are transferred for a limited period or otherwise;
- the transferor of the rights is the author of the software or another person downstream in the commercial exploitation of the software.

They accordingly expressed the view that in all of the above circumstances the payments are taxable in the State of source (State S) if the convention between

State S and the State of residence (State R) of the recipient provides for the taxation of royalties at source. The royalties received in State R are also taxable there in accordance with its laws. State R must eliminate double taxation in accordance with the convention for example by giving a tax credit.

43. The contrary view of other countries was that the intention of Article 12 was to eliminate source taxation and that the definition of royalties had to be interpreted more narrowly so as to limit its scope. They considered that an important distinction had to be drawn between:

- the acquisition of software for the personal or business use of the purchaser;
- the acquisition of software for commercial development or exploitation.

In the first situation, they considered that the purchaser had done no more than purchase a product and that the payment fell to be dealt with in accordance with Article 7 or Article 13 as appropriate. They did not consider it to be relevant that the product was protected by copyright and that there were restrictions on the use to which the purchaser could put it. In the second situation, they agreed that the payments were made for rights to exploit intellectual property and accordingly were likely to be royalties. Examples of such exploitation included the reproduction or adaptation of software for onward distribution. In such situations, payments to the owner of the copyright were likely to be royalties especially if they were related to the number of products distributed.

44. The solution to these crucial differences of view must lie in the definition of royalties in paragraph 2 of Article 12: "The term "oyaltie" as used in this Article means payments of any kind received as a consideration for the use of, or the right to use, any copyright [...] any patent [...]". On the broad interpretation, the mere purchase of a product protected by copyright or a patent is likely to result in the payment of a royalty as consideration for use of the product. The narrower interpretation is that "use" as referred to in the Model Convention is limited to use by an acquirer who seeks to exploit commercially the intellectual property of another. A substantial majority of the Committee took the firm view that the narrower interpretation was correct. They felt that paragraph 1 of the Commentary on Article 12 which describes royalties in principle as "income to the recipient from a letting" made the position clear. As the outright acquisition of a product (*e.g.* a computer programme) for simple use by the purchaser could not represent any form of letting it clearly could not give rise to a royalty within the meaning of Article 12.

Second hypothesis: transfer of all rights

45. In the second hypothesis, the payments are effected as consideration for the final transfer of all the rights attached to the software. In this case there was general agreement that the payments were in consideration for the acquisition of the software without involving questions on rights to use it. The provisions of Article 12 were not applicable.

46. A further question is whether it is appropriate to classify certain other transactions as a transfer of software such as:

- those whose purpose is to transfer the exclusive right to use software during a specific period or in a limited geographical area;
- those involving additional consideration related to the usage of the software;
- those which comprise substantial lump-sum payments.

47. Countries have differing practices in their treatment of such transactions and it is impossible to draw a clear borderline between payments which are properly to be treated as a capital gains matter and those that are royalties within Article 12 in every situation. Nevertheless there are clear principles to be followed in determining the nature of the transaction. Firstly, regard must be had to the precise terms of the contract under which the software rights were transferred. Secondly, where a transfer of ownership of rights has occurred, payments cannot be for the use of the rights. Finally, the form that the consideration takes, whether payment by instalments or, in the view of most countries, payment related to a contingency, is irrelevant in determining the character of a transaction.

Mixed contracts

48. The Committee finally considered payments under mixed contracts. Examples of such contracts include:

- sales of hardware with built-in software;
- concessions of the right to use software combined with the provision of services.

49. The problem of mixed contracts also arises in other fields, for example in respect of patent royalties and know-how. The Commentary on Article 12 discusses the problem at paragraph 12. It recommends breaking down the total amount of the consideration which is payable under the contract on the basis of the information contained in the contract or by means of a reasonable apportionment and then applying to each apportioned part the appropriate tax treatment. When, however, some of the parts are of an ancillary character compared to the principal part, the treatment applicable to the latter part may be extended to the entire consideration. Mixed contracts relating to software

do not therefore pose any problem of principle since the approach in the Commentary for other types of mixed contracts is appropriate.

Specific example

50. An enterprise purchases a computerised machine tool. If a single payment were made, some countries would regard it as paid solely for the acquisition of an asset. If, however, further payments were required to be made, related for example to the number of times the machine was used or the number of products manufactured on it, then they would recognise the additional payments as royalties within Article 12. Other countries would regard the payment as partially for the acquisition of the asset and partially for the right to use the operating software. They would accordingly apportion the payment and treat the latter part as representing a royalty. Unless the latter part were minor or ancillary, they would apply source taxation.

IX. CONCLUSIONS

51. The subject of software payments is of undoubted importance in view of the rapidity of technological developments in recent years. The subject does not, however, raise new issues of principle. Rather it highlights in a new form long-standing difficulties especially regarding source taxation and the scope of Article 12 of the Model Convention. The Committee considered nevertheless that it was a useful subject of study and that it would be helpful to set out how the Model Convention is to be interpreted specifically in relation to software payments.

52. The conclusions of the Committee are that:

a) Payments made in connection with software represent royalties within the meaning of Article 12 only in circumstances where there is a limited grant of rights (not amounting to a change in ownership) for the commercial development or exploitation of the software. Payments for software, whether "bundled" or not, which is acquired for the personal or business use of the purchaser do not represent royalties.

b) Payments made for the alienation of all rights attached to software do not represent royalties. The characterisation of payments made for more limited alienation of rights (as described in paragraph 46) may depend on the precise terms of the relevant contract but in circumstances where there is alienation of ownership, the consideration paid does not represent a royalty in the view of most countries.

c) Where countries adopt in their bilateral conventions the zero rate of withholding tax recommended in Article 12, problems in connection with software payments cannot arise since the taxation of such payments is solely a matter for the State of residence of the recipient except to the extent that the payments are effectively connected with a permanent establishment in the State of source.

d) Where a double taxation convention provides for source taxation in respect of some but not all royalties, it is expected that software payments that properly have the characteristics of royalties will normally be classified as paid in respect of copyright.

e) It is the responsibility of the State of residence to relieve any resulting double taxation where the terms of a bilateral convention with a State of source permits the latter to exercise rights of taxation in respect of software payments. Any difficulties in the application of the convention should be resolved under the mutual agreement procedure of Article 25.

f) The terms on which technology is transferred across national borders within multinational enterprises should conform with the arm's length principle underlying Article 9.

g) No changes to the text of the Model Convention are required but it is recommended that clarification of the treatment of software should be included in the Commentary on Article 12 (with cross-references to Articles 7 and 14) in accordance with Annex 3 to this Report.

APPENDIX 1

QUESTIONNAIRE ON TAX TREATMENT OF SOFTWARE

1. Legal Classification

   1.1 Is protection provided under your domestic legislation for the intellectual property in software?

   1.2 If it is protected, is it under the copyright legislation, patent legislation or other form of legislation?

   1.3 If it is protected, does it apply only to the author or does it also cover those who may adapt or transform the software?

   1.4 Are the following distinctions of significance in your internal law?

      1.4.1 System or operational software and application software,

      1.4.2 Software as an integral part of hardware or canned software,

      1.4.3 Bundled or unbundled software product, and

      1.4.4 Other distinctions?

   1.5 Please add any remark which may facilitate understanding the legal classification of rights related to software.

2. Tax Classification as the country of source

Assume that payments for the use of software are made by a resident of your State to a resident of another State with which you do not have a tax treaty.

   2.1 Under your tax legislation would you classify any payment from the use of software as a capital payment?

      2.1.1 Only if it was for the outright acquisition of all rights relating to the software.

      2.1.2 In other circumstances and, if so, what?

      2.1.3 No.

   2.2 Under your tax legislation, under what circumstances would you classify a payment, other than a capital payment, as either:

      2.2.1 A payment for goods and services?

      2.2.2 A royalty payment?

   2.3 Where payments are for a right to use and for services under a contract requiring advice and information to be provided without any separately stated consideration, would you, in any circumstances, break down the total consideration into the separate elements of payment for services and royalty payment respectively?

2.3.1 If no, is this because there is no power in your legislation to enable this to be done?

2.3.2 If yes, on what basis is the split calculated?

2.4 Does your country provide for taxation at source on the following payments:

2.4.1 A capital payment?

2.4.2 A payment for goods and services?

2.4.3 A royalty payment?

2.5 In each case referred to in 2.4 is this because they are:

2.5.1 Classified as royalties?

2.5.2 For some other reasons?

2.6 If they are classified as royalties subject to tax at source, does the definition of royalties in your tax legislation coincide with the definition in Article 12 of the Model Convention and, if not, how does it differ?

3. Tax classification as the country of residence

Assume that payments for the use of software are made by a resident of another country with which you do not have a tax treaty to a resident of your country.

3.1 Under your tax legislation would you classify any receipt for the use of software as a capital payment

3.1.1 Only if it was for the outright disposal of all rights relating to the software.

3.1.2 In other circumstances and, if so, what?

3.1.3 No.

3.2. Under your tax legislation, under what circumstances would you classify a receipt, other than a capital receipt, either as:

3.2.1 A receipt for goods and services?

3.2.2 A receipt for royalty?

3.3 Where payments are for a right to use and for services under a contract requiring advice and information to be provided without any separately stated consideration, would you, in any circumstances, break down the total consideration into the separate elements of receipt for services and receipt for royalty respectively?

3.3.1 If no, is this because there is no power in your legislation to enable this to be done?

3.3.2 If yes, on what basis is the split calculated?

3.4 Are there any provisions in your tax legislation that would prevent you from giving a credit for the tax due to the country of source (or from exempting the receipt) that do not apply to income received from residents of other countries generally?

4. Are the distinctions referred to in 1.4 above relevant for any of the answers in paragraphs 2 and 3 above and, if so, how and in what ways?

5. Double taxation conventions

5.1 Do you consider that the payments and receipts referred to in 2.1 and 3.1 come under Article 12 of the Model Convention? If not, under which Article would you consider them to fall?

5.2 Do you consider that the payments and receipts referred to in 2.2.1, 2.2.2 and 3.2.1, 3.2.2 come under Article 12 of the Model Convention? If not, under which Article would you consider them to fall?

5.3 In the cases described in 2.3 and 3.3 would you apply Article 12 to none, part only or all of the payment/receipt?

5.4 Do you generally adopt Article 12 of the Model Convention in your tax treaties with other member countries? If not, please describe the main deviations?

5.5 When a right to tax royalties at source is provided, do you take the definition of "royalties" found in Article 12 as is or do you modify it (and if the latter, please specify)?

5.6 If you consider that Articles other than Article 12 apply to software payments, do you make any special provision in your treaties for software?

5.7 Where you have a treaty with the country of source which has exerted taxing rights having classified the income differently from your internal law, would you give double taxation relief and if so how and upon what measure of income?

5.8 Do you consider that the Model Convention and its Commentary need to be revised to deal in a clearer way with software payments and, if so, what suggestions would you make?

5.9 Any other comments?

APPENDIX 2

REPLIES TO QUESTIONNAIRE ON TAX TREATMENT OF SOFTWARE

1. Legal classification

	1.1 Does domestic legislation protect?	1.2 Is this Copyright or other?	1.3 Does protection apply only to author, are adoptions covered?	1.4 Are certain distinctions significant? (See full Questionnaire)	1.5 Other Remarks
Netherlands	Yes	Copyright by case law	Includes licencees who adopt or transform	No	Legislation pending to include software
Australia	Yes	Copyright	Adaptations by owners and others	No	Inquiry into aspects of copyright protection
Greece	Indirectly	Copyright by case law possible	Others may be protected depending on contract	No	–
Ireland	Yes	Copyright	Only author	No	Not specifically included in copyright yet
Sweden	Yes	Copyright	Some adaptations	No	Software considered as literary work
Switzerland	Only partial	No copyright but some other protections	Where protected can include adaptations	1 & 2 Yes 3 & 4 No	–
United States	Yes	Copyright and some others	Owner of copyright, adaptation not usually covered	No	Definition of computer program included in copyright act
Germany	Yes	Copyright and possible patent	Author, some rare additions	Protection may apply only to sophisticated programs	See 1.4 high standards needed to gain protection
Austria	Yes	Copyright	Includes adaptations	No	Single program may not qualify as literary work. No specific mention in legislation

1. Legal classification *(cont.)*

	1.1 Does domestic legislation protect?	1.2 Is this Copyright or other?	1.3 Does protection apply only to author, are adoptions covered?	1.4 Are certain distinctions significant? (See full Questionnaire)	1.5 Other Remarks
Spain	Yes	Copyright	Includes subsequent versions	3 may be of significance	Computer software specifically included
Japan	Yes	Copyright	Some adaptations	No	Software included specifically in copyright law
United Kingdom	Yes	Copyright	Some adaptations	No	Specifically included as copyright
Norway	Yes	Copyright	Some adaptations and transformations	No	Regarded as literary work not specifically included in legislation
France	Yes	Copyright	Yes, adaptations and transformations	Bundling effects accountancy treatment	–
Luxembourg	Yes	Copyright	Extends to adaptations	–	–
Italy	Yes	Copyright	–	Copyright if software independent. If integral then follow treatment of hardware	–
Portugal	Yes	Copyright	–	–	No specific legislation
Denmark	Yes	Copyright plus others	Extends to adaptations	–	Computer programs usually copyright. User manuals literary works
Canada	Yes	Copyright	Extends to adaptations	No	–
New Zealand	Probably	Copyright	Some adaptations	Not for tax, but may affect patent law	Copyright protection is unsettled but believed to exist
Belgium	Not directly	Copyright by case law	–	Yes, if integral part of hardware then treat as hardware. Others may be intangible property	Probable that protection will be introduced

2. Classification as country of source – I

	2.1 Under what circumstances are payments for software capital?	2.2 Are non capital payments classified as goods and services or royalties?	2.3 If payment covers services and right to use is a breakdown necessary?	2.4.1 Is tax deducted at source from payments for capital?
Netherlands	Capital for acquisitions with useful life of at least 1 year	No distinction	No, no tax at source on royalties	No
Australia	Generally revenue, capital if sold with hardware	For all practical purposes as royalty	No, both treated as royalty	No
Greece	No specific provision	As royalty	No	No
Ireland	On facts, outright acquisition: capital	Goods and services if stock, most others royalties	Yes, on a fair and reasonable basis	No
Sweden	Capital if custom made and life more than 3 years	Goods and services if stock, royalty if licence fees periodical	Yes, split according to value	No
Switzerland	No taxation of royalties at source, no distinction	No distinction for tax purposes	No, no tax distinction	No
United States	Acquisitions: capital, payments for use: revenue, look to substance	Question of fact	Yes, depends on facts	Generally no. Some exceptions
Germany	Acquisition or unlimited use: capital	Goods and services if dominant part. Royalties if payment for limited right to use	Yes, if material, on a just and reasonable basis	No, with exceptions
Austria	Capital if valuable asset	Standard software goods or services, if technical experience, then royalty	Yes, if material, on just and reasonable basis	Yes, if for use of technology
Spain	Capital if acquisition or lump sum for several years usage	Royalty if ownership of property remains, so tax significance	Yes, reasonable basis according to contract	Yes
Japan	–	Case by case basis	Yes	Yes if for use
United Kingdom	Acquisitions capital. Lump sum can be capital	Royalty unless bought as stock or for distribution	Yes if material, based on contract	Yes if for use
Norway	Capital if considerable and durable over 3 years life	No distinction necessary	No	If recipient in business in Norway
France	Outright acquisitions	No distinction necessary	No, as tax treatment similar	Yes
Luxembourg	Outright acquisitions	Patent if right to use	Yes, on reasonable basis	No
Italy	Not capital	No distinction necessary	No, as similar tax treatment	Yes

2. Classification as country of source – I *(cont.)*

	2.1 Under what circumstances are payments for software capital?	2.2 Are non capital payments classified as goods and services or royalties?	2.3 If payment covers services and right to use is a breakdown necessary?	2.4.1 Is tax deducted at source from payments for capital?
Portugal	–	Generally taxed as copyright payments	–	–
Belgium	Capital if outright acquisition	Royalties if paid for use without outright acquisition	Yes	No
Denmark	Capital if sizeable and 3 years life	Royalty unless stock	Yes on estimated value	No
Canada	If outright disposal but this is unusual	Royalty unless for distribution	No, usually treat as royalty	No
New Zealand	Outright acquisitions capital	Generally royalty but services if payment unconnected with royalty or know how	Yes, but unusual, normally royalty	No

2. Classification as country of source – II

	2.4.2 Is tax deducted at source from payments for goods and services?	2.4.3 Is tax deducted at source from payments for royalties?	2.5 In 2.4 is this because they are royalties?	2.6 If royalties, if your definition of royalties similar to Article 12?
Netherlands	No	No	No tax on royalties	N/A See 2.5
Australia	No, unless source income	Yes	Yes as royalties	Wider definition of royalty in Australian law
Greece	No	Yes	Yes as royalties	As model with additions
Ireland	No	No	No tax at source on copyright royalties	N/A See 2.5
Sweden	No	Yes	Yes on business profits	No definition of royalty, treated as business profits
Switzerland	No	No	No tax at source	N/A
United States	No. Unless recipient trading in US	Yes	Depends on source of income	No internal definition of royalty
Germany	No	Yes	Yes, with some exceptions	Yes
Austria	Yes	Yes	Yes	Definition is not as wide as Article 12
Spain	Yes	Yes	No, could be taxed at source anyway	Similar but no tax distinction between royalty and goods or services
Japan	Yes	Yes	–	Broader definition than Article 12
United Kingdom	No	Yes	Yes	Taxation at source only on some types of royalties
Norway	As 2.4.1	As 2.4.1	No withholding tax	No definition of royalty
France	Yes	Yes	No, can be taxed at source in both cases	–
Luxembourg	No	Yes	Yes	Yes
Italy	Yes, unless employee services	Yes	No can be taxed at source anyway	As Article 12
Portugal	–	–	–	Tax deduction when beneficiary or payor resident of Portugal
Belgium	Yes	Yes	Could be taxed in any event	No, could be different sources. Capital gains from sale of rights etc. usually business profits

2. Classification as country of source – II *(cont.)*

	2.4.2 Is tax deducted at source from payments for goods and services?	2.4.3 Is tax deducted at source from payments for royalties?	2.5 In 2.4 is this because they are royalties?	2.6 If royalties, if your definition of royalties similar to Article 12?
Denmark	No	Yes	Yes	Definition does not cover many payments for use
Canada	Yes	Yes	Yes but also tax on services	Similar but exceptions for reproductions
New Zealand	No	Yes	Yes	Broader than model Article 12

3. Tax Classification as country of residence

	3.1 Under what circumstances are receipts classified as capital?	3.2 Are non capital receipts classified as goods and services or as royalties?	3.3 If receipts cover services and right to use is a breakdown necessary?	3.4 Any special treaty provisions restricting credit for software but not other income?	4 Are the distinctions (*e.g.* bundled etc.) referred to in 1.4 relevant for question 2 and 3?
Netherlands	Capital if ownership sold and durable	Goods and services if trade, royalty if for design	Yes, prorata split	No	No
Australia	Capital if not business income	Royalty, can be goods if sold with hardware	No both within definition of royalty	No	Relevant to 2.2 and 3.2
Greece	No specific provision	As royalty but no specific provision	No	–	No
Ireland	Outright disposals except where stock	Goods and services if trade, otherwise royalty	If different elements specified split on fair and reasonable basis	No	No
Sweden	Capital for outright disposal unless stock	No distinction for tax purposes	No, no distinction in tax treatment	No	No
Switzerland	No distinction relevant	No distinction relevant	No, no distinction in tax treatment	No	–
United States	Capital if for exclusive use and durable unless stock	Royalty if services only auxillary, reflect substance	Yes based on relative value	No	No
Germany	Capital if for unlimited use or if payment is a lump sum	Depends on contract	Yes if amounts material, on a just and reasonable basis	No	No
Austria	If fixed asset then disposal follows	Standard software sales receipts, right to use royalty	Yes if material split on just and reasonable basis	Relief can be granted if necessary	Possibly
Spain	Capital unless trading in software	No significance of distinction	No, as no tax distinction	No	Yes, customs duty on a bundled package precludes income tax
Japan	Business income if incorporated. If individual can vary	No difference in treatment	No, as no tax distinction	–	No
United Kingdom	Outright disposal: capital and in certain other cases	Can be distinguished but no internal tax differences	No, as no tax distinction	No	Yes bundled software usually follows treatment of hardware

3. Tax Classification as country of residence *(cont.)*

	3.1 Under what circumstances are receipts classified as capital?	3.2 Are non capital receipts classified as goods and services or as royalties?	3.3 If receipts cover services and right to use is a breakdown necessary?	3.4 Any special treaty provisions restricting credit for software but not other income?	4 Are the distinctions (*e.g.* bundled etc.) referred to in 1.4 relevant for question 2 and 3?
Norway	Capital if for use of software	No difference both business income	No	No	No
France	Capital if disposal of all rights	No difference in treatment except for sale of goods	No	No	Bundled software effects accountancy treatment
Luxembourg	Capital for outright disposal	No difference in treatment except for sale of goods	No	No	No
Italy	Not capital	No difference in treatment	No, treatment same as sales price	No	Yes whether software is part of hardware
Portugal	–	No difference in treatment	No	No	–
Denmark	Capital unless trading	No difference in treatment	No	No	No
Canada	If outright disposal of fixed asset	No difference in treatment	No	No	No
New Zealand	Outright disposals capital unless by way of trade	Normally royalties unless payments for services not connected	Yes but not usual	No	Generally no, bundled software follows treatment of hardware
Belgium	Capital for outright disposal	No difference unless received by individual and not a business activity	Only if individual	No	Yes distinguish between sale of equipment and other payment

4. Double Taxation Conventions – I

	5.1 Are payments in 2.1 and 3.1 within Article 12 if not which article?	5.2 Are payments in 2.2.1 and 3.2.1 within Article 12 if not which article?	5.3 If payment in 2.3 or 3.3. do you apply Article 12 to none, all or part?	5.4 Do you adopt Article 12 in your treaties?
Netherlands	No, 7 and 14 and possibly 13	Yes but also 7 and 14	In part	Aim for Article 12 but half treaties include withholding
Australia	Yes, but may be 12, 13 or 7	Yes but also 7 and 14	Normally all	No, wider definition of royalty and tax at source
Greece	Yes	Yes	All	Approximately but allow for tax at source in most treaties
Ireland	Yes but if capital then 13, 7 or 14	Yes but also 7 and 14	In part	Yes only 4 exceptions
Sweden	Yes but also 7, 13 and 14	As for 5.1	To royalty part	Yes
Switzerland	Not if acquisition then 7 or 14	Yes	Part only	Yes, but only incorporated in half of treaties
United States	Could also be 7 or 13	No	Part only	Yes generally, some treaties allow for reduced withholding tax
Germany	Only if for use otherwise, 13, 7 or 14	Yes for use but also 13, 7 and 14	To royalties part	Yes generally, but half treaties have reduced withholding tax
Austria	Only if for use otherwise 7	Yes	To royalty part	With a 10% tax at source
Spain	Yes but also 13, 7 or 14	Yes	To royalty element	No, reserve right to deduct tax at source
Japan	If for use, also 7, 13 and 14	Also 7, 13 and 14	To royalty part	No levy tax at source
United Kingdom	If for use, also 7, 13 and 14	Yes	To royalty part	Yes but half treaties include tax at source
Norway	7, 13 or 14 as case may be	Also 7, 13, 14	To royalty part	Yes
France	Also 7, 13 or 14	Yes	To royalty part	Treaties often include withholding tax, sometimes only certain royalties
Luxembourg	7, 13 or 14	Goods and services 7 and 14	To royalty part	Some treaties allow withholding tax
Italy	Also 7, 13 or 14	Yes	Yes except for employee services	Yes
Portugal	–	–	–	–
Denmark	Also 7, 13 or 14	Also 7, 13, 14	To royalty part	As far as possible

4. Double Taxation Conventions – I *(cont.)*

	5.1 Are payments in 2.1 and 3.1 within Article 12 if not which article?	5.2 Are payments in 2.2.1 and 3.2.1 within Article 12 if not which article?	5.3 If payment in 2.3 or 3.3. do you apply Article 12 to none, all or part?	5.4 Do you adopt Article 12 in your treaties?
Canada	Yes but others possible	7	To royalty part	Yes but with some withholding rights
New Zealand	Also 7, 13 or 14	Yes	To royalty part	No, wider definition, tax at source
Belgium	Yes but also 7, 13 or 14	7 or 14	To royalty part	Yes with some exceptions

5. Double Taxation Conventions - II

	5.5 If royalties are taxed at source are they defined as in 12?	5.6 Is software mentioned in other articles?	5.7 Where a treaty country taxes the income differently, do you give relief and how?	5.8 Amend the Model or its commentary?	5.9 Other comments?
Netherlands	Yes with some modification	No	Yes if in accordance with treaty	No	No
Australia	No	No	Yes if foreign source	N/A	No
Greece	Yes with addition	No	Yes	As for UK	Include discussion in commentary
Ireland	Separate definition	No	Yes	No, not 12, no problem if no withholding tax	No
Sweden	Modified as in "Trends in International Taxation"	No	Yes by mutual agreement	No	Include in commentary that 7, 12, 13 or 14 could apply
Switzerland	Yes but with addition	No	No, but mutual agreement tried	Amend Commentary	No
United States	Modified	None yet, some under discussion	–	No, resolve bilaterally	No
Germany	Yes, one exception	No	Yes	Add to Commentary on Article 12	No
Austria	Yes, normally	No	Yes	No	No
Spain	Yes with addition	No	–	Yes expand Commentary	No
Japan	Yes with addition	No	Yes	–	No
United Kingdom	Yes with addition	No	In accordance with treaty	No deal with bilaterally and expand Commentary	No
Norway	Yes with modification	No	Mutual agreement	Expand Commentary to point out that 7, 12, 13 or 14 could apply	No
France	Yes similar	Yes, in recent treaties	By mutual agreement	Mention in Article 12 and expand Commentary on mixed contracts and when to apportion	–

5. Double Taxation Conventions - II *(cont.)*

	5.5 If royalties are taxed at source are they defined as in 12?	5.6 Is software mentioned in other articles?	5.7 Where a treaty country taxes the income differently, do you give relief and how?	5.8 Amend the Model or its commentary?	5.9 Other comments?
Luxembourg	Yes with additions	No	By mutual agreement	Mention in 12 and expand Commentary on mixed contracts	No
Italy	Yes	No	Yes	Mention software in 12	No
Portugal	–	–	–	–	No
Denmark	Narrower definition	No	Yes	Expand Commentary to say 7, 12, 13 or 14 could apply	No
Canada	Yes	No	Yes, under domestic rules	No	No
New Zealand	Yes, often wider	No	Yes	Expand Commentary to provide greater clarity	No
Belgium	Yes, minor amendments	No	Mutual agreement	Define types of payment in Commentary	No

APPENDIX 3

PROPOSED AMENDMENTS TO THE COMMENTARY ON THE MODEL TAX CONVENTION

1. Add the following at the end of the penultimate sentence of paragraph 34 of the Commentary on Article 7:

(*cf.* paragraph 13 of the Commentary on Article 12 which discusses the principles governing whether in the particular case of computer software payments should be classified as commercial income within Articles 7 or 14 or as a capital gains matter within Article 13 on the one hand or as royalties within Article 12 on the other.)

2. Add the following paragraphs 13 to 18 immediately after paragraph 12 of the Commentary on Article 12:

13. Whether payments received as consideration for computer software may be classified as royalties poses difficult problems but is a matter of considerable importance in view of the rapid development of computer technology in recent years and the extent of transfers of such technology across national borders. Software may be described as a programme, or series of programmes, containing instructions for a computer required either for the operational processes of the computer itself (operational software) or for the accomplishment of other tasks (application software). It can be transferred through a variety of media for example in writing, on a magnetic tape or disc, or on a laser disc. It may be standardised with a wide range of applications or be tailor-made for single users. It can be transferred as an integral part of computer hardware or in an independent form available for use on a variety of hardware. The rights in computer software are a form of intellectual property. Research into the practices of OECD member countries has established that all but one protect software rights either explicitly or implicitly under copyright law. Transfers of rights occur in many different ways ranging from the alienation of the entire rights to the sale of a product which is subject to restrictions on the use to which it is put. The consideration paid can also take numerous forms. These factors may make it difficult to determine where the boundary lies between software payments that are properly to be regarded as royalties and other types of payment.

14. Three situations are considered. The first is of payments made where less than the full rights in software are transferred. In a partial transfer of rights the consideration is likely to represent a royalty only in very limited circumstances. One such case is where the transferor is the author of the software (or has acquired from the author his rights of

distribution and reproduction) and he has placed part of his rights at the disposal of a third party to enable the latter to develop or exploit the software itself commercially, for example by development and distribution of it. It should be noted that even where a software payment is properly to be regarded as a royalty there are difficulties in applying the copyright provisions of Article 12 to software royalties since paragraph 2 of the Article requires that software should be classified as a literary, artistic or scientific work. None of these categories seems entirely apt but treatment as a scientific work might be the most realistic approach. Countries for which it is not possible to attach software to any of those categories might be justified in adopting in their bilateral treaties an amended version of paragraph 2 of Article 12 which either omits all references to the nature of copyrights or refers specifically to software.

15. In other cases, the acquisition of the software will generally be for the personal or business use of the purchaser. The payment will then fall to be dealt with as commercial income in accordance with Articles 7 or 14. It is of no relevance that the software is protected by copyright or that there may be restrictions on the use to which the purchaser can put it.

16. The second situation is where the payments are made as consideration for the alienation of rights attached to the software. It is clear that where consideration is paid for the transfer of the full ownership the payment cannot represent a royalty and the provisions of Article 12 are not applicable. Difficulties can arise where there are extensive but partial alienation of rights involving:

- exclusive right of use during a specific period or in a limited geographical area;
- payment of additional consideration related to usage;
- consideration in the form of a substantial lump sum payment.

17. Each case will depend on its particular facts but in general such payments are likely to be commercial income within Article 7 or 14 or a capital gains matter within Article 13 rather than royalties within Article 12. That follows from the fact that where the ownership of rights has been alienated in full or in part, the consideration cannot be for the use of the rights. The essential character of the transaction as an alienation cannot be altered by the form of the consideration, the payment of the consideration in instalments or, in the view of most countries, by the fact that the payments are related to a contingency.

18. The third situation is where software payments are made under mixed contracts. Examples of such contracts include sales of computer hardware with built-in software and concessions of the right to use

software combined with the provision of services. The methods set out in paragraph 12 above for dealing with similar problems in relation to patent royalties and know-how are equally applicable to computer software. Where necessary the total amount of the consideration payable under a contract should be broken down on the basis of the information contained in the contract or by means of a reasonable apportionment with the appropriate tax treatment being applied to each apportioned part.

[*The following paragraphs of the Commentary on Article 12 are renumbered accordingly.*]

3. Add the following at the end of paragraph 3 of the Commentary on Article 14:

e.g. in determining whether computer software payments should be classified as commercial income within Articles 7 or 14 or as royalties within Article 12.

I. INTRODUCTION

1. Double tax treaties are concluded on a bilateral basis. Specific problems may therefore arise in situations where more than two States are involved. Sometimes the solution is to apply the provisions of the treaties that are relevant. For instance, Article 4 of the Model Convention contains rules for the settlement of conflicts concerning residence when a person is a resident of several States and receives income from third States.

2. But the Model Convention does not provide any general and consistent solution to the problems raised by typical triangular cases, *i.e.* those in which:

- income from dividends, interest or royalties is derived from a source in State S;
- such income is received by a permanent establishment in State P;
- the permanent establishment depends on an enterprise resident in State R.

3. The purpose of this note is to analyse the difficulties to which triangular cases give rise in the three States concerned, to show countries' current practices and to discuss ways of dealing with the problem.

II. OUTLINE OF THE PROBLEM

A. *Practical importance of the typical triangular case*

4. The fact that many States have already encountered problems with this typical triangular case shows that the matter is of some practical importance. With growing international economic co-operation and, in particular, economic integration within the European Communities, it is to be expected that triangular cases will occur more frequently in the future. The banking and insurance sectors, for example, are directly concerned. Banks often have foreign branches that may receive interest from third countries on loans granted to residents of those countries. Also, branches of insurance companies located in countries other than that where their head office is established are sometimes required, under the law of the country where they are located, to have risk-cover capital. The income from this capital, which often consists of shares or bonds, may come from third States, in which case it is clearly attributable to the branch.

5. Also, industrial or commercial enterprises with permanent establishments in a number of countries may, for example, attach to one of them an industrial plant hired to a resident of a third State; if the attachment of the corresponding asset to the permanent establishment is normal, then the rent from the plant hire is clearly also attributable to it.

B. *Tax problems arising in the typical triangular case*

6. Problems will differ depending on whether State R taxes (subject to the deduction of a tax credit) or exempts from tax the profits of the permanent establishment located in State P, profits which include passive income from State S.

i) State R taxes the profits of the permanent establishment

7. If there is no tax treaty between the three States concerned, the enterprise has an unlimited tax liability in State R. The profits of the permanent establishment, including income from State S, are taxed in State P. State S can also levy withholding tax on income paid to the permanent establishment.

8. As to the question of whether, and how, double taxation is avoided on the permanent establishment's profits in general or on income from a third State, only the domestic law of each country is relevant.

9. The situation is different if double taxation treaties have been concluded between the States concerned. The purpose of these treaties is to avoid the double taxation of income by two States. They apply only to the residents of one Contracting State who receive income from the other State or who possess assets located in the other State. In addition, they lay down general rules concerning income from third countries.

10. The typical triangular case, however, involves three States. If each of them has concluded a treaty with the other two States in accordance with the Model Convention, the tax situation according to the Articles of the Model Convention and the Commentaries is as follows:

Situation for State S

11. For State S, dividends, interest or royalties are paid to a resident of State R; State S can therefore impose withholding tax as provided for in the R-S treaty. The fact that the payments are attributable to a permanent establishment in State P does not mean that the treaty between State R and State S is not applicable to State S. On the other hand, the treaty between State P and State S is not applicable, given that the permanent establishment is not a resident of State P.

12. The problems that arise in this context relate to procedure and endorsement: is it the enterprise or the permanent establishment that must claim withholding tax relief and by whom should such a claim be endorsed?

R (11)

Situation for State R

13. For State R, both treaties (R-S and R-P) are in principle applicable: the treaty between State R and State S because the income comes from State S and goes to a resident of State R, and the treaty between State R and State P because the profits are those of a permanent establishment situated in State P. Let us suppose that State R taxes the profits of the permanent establishment, which include the income from State S, and grants a tax credit. Such a tax credit usually takes into consideration the taxes paid in State P. But under the R-S treaty, State R is also required to avoid double taxation. As a rule, when no triangular cases are involved, it does so by allowing the tax due in State S to be set against its own taxes on income from State S.

14. In a triangular case, State R must already grant a credit for the taxes paid in State P; the question then arises as to whether the taxes paid in State S and not credited in State P should also be taken into consideration. The problems of procedure and endorsement mentioned for State S also arise for State R.

Situation for State P

15. Under the treaty between State R and State P, State P can tax the profits that are attributable to a permanent establishment via which an enterprise of State R carries on an activity in State P. The dividends and interest from State S form part of these profits and are therefore taxable in State P. The question arises, however, as to whether State P should take into account a limited right of taxation of State S. Given that the treaty between State P and State S is not applicable, it does not seem that State P has any obligations arising from it, such as granting a tax credit in respect of the tax due in State S. Should State P, under the R-P treaty, grant such a credit on the basis, for example, of the provisions on non-discrimination contained therein?

ii) State R exempts the profits of the permanent establishment

16. This situation does not often arise when State R and State P are not bound by a tax treaty. It is more frequent when State R and State P have concluded a treaty. The Model Convention (Articles and Commentaries) provides no satisfactory solution to the problems of double taxation and tax avoidance that arise in this situation.

Problem of double taxation

17. State R does not tax passive income from State S either as such or as an item included in the profits of the permanent establishment located in State P. It therefore cannot grant a tax credit in respect of:

- tax levied in State S, if State P grants no credit in respect of that tax;

– or any possible difference between the amount of that tax and the amount of the credit granted in State P.

18. In other words, when the income is imposed both in State S and in State P (which is quite normal if neither State S nor State P is a tax haven), double taxation can be eliminated only by State P.

19. When State R and State P have signed a treaty according to the Model Convention, a literal interpretation[1] of paragraph 4 of Article 24 would mean that State P would have to grant a tax credit in the same way as it would to residents receiving dividends, interest or royalties from State S. This would, in certain cases, only partly solve the problem of double taxation, since the credit granted in State P (by virtue of the treaty between State P and State S) might be smaller than the tax charged in State S (by virtue of the domestic law of State S or of the treaty between State R and State S). But in such a situation the commentaries on paragraph 4 of Article 24 do not provide for the granting of a tax credit, and no other provision of the Model Convention can settle the double taxation problem.

Problem of tax avoidance

20. Most delegations consider that Articles 10, 11 and 12 of the treaty between State S and State R (supposing that the treaty follows the Model Convention) justify exemption or relief from tax on income in State S, even when that income is not liable to tax in State R (by virtue of that State's domestic law or of the treaty between State R and State P), and whatever the location of the permanent establishment receiving that income.

21. Clearly this interpretation gives banks and other enterprises in State R an incentive to place assets generating passive income in one of their permanent establishments in a State or Territory offering favourable tax treatment. So, far from closing a loophole, the Model Convention makes one available.

22. The problem is briefly referred to in paragraph 6 of the Commentary on Article 21, and it is suggested:

– either that an addition be made to paragraph 2 of Article 21, waiving the application of its provisions when income-generating assets are attached to a permanent establishment essentially in order to take advantage of paragraph 2 of Article 21 in the treaty between State R and State P;
– or that State R should not apply paragraph 2 of Article 21 of the R-P treaty when State R considers that the attachment of the assets concerned to the permanent establishment situated in State P is fictitious.

23. In certain cases, however, the first method suggested is extremely difficult, not to say impossible, to apply – for instance, to banks carrying out large numbers of transactions in many countries. The second method disregards States whose domestic legislation exempts from tax the profits made by permanent establishments located outside their territory. So, in fact, satisfactory solutions to the tax avoidance problem considered here still have to be found.

III. DISCUSSION OF POSSIBLE SOLUTIONS

24. First, it is necessary to examine the solutions provided for by the Model Convention and the Commentary. Next, the way countries have responded needs to be studied in order to see what solutions have been found. And, lastly, the advantages and drawbacks of the various possibilities have to be discussed.

A. Discussion based on the Model Convention and Commentary

25. The Commentary on the Model Convention mentions the problems raised by triangular cases in relation to Article 21, "Other income" (paragraphs 5 and 6 of the Commentary), Article 23, "Methods for elimination of double taxation" (paragraph 10 of the Commentary) and Article 24, "Non-discrimination" (paragraphs 52 to 55 of the Commentary). These comments did not appear in the Commentary on the 1963 Draft Convention.

26. When the 1963 Draft Convention was being revised , the problems raised by triangular cases were examined, particularly in respect of the following questions:

- What is the scope of the Article on non-discrimination?
- Is the permanent establishment in State P entitled to a tax credit, or even an exemption, in respect of income from State S?
- How large should this tax credit be?
- What are the formal requirements for the granting of relief?
- How can abuses be prevented?

27. At the time, member countries came to the conclusion that the problems involved in the typical triangular case were too complex to be dealt with in the actual wording of the Model Convention or Commentary. They therefore recommended that countries should prescribe ways of dealing with them in their bilateral treaties or settle them by mutual agreement.

MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

B. *Practice in Member countries*

28. Since the Model Convention provides no solution to triangular cases, it is useful to see how member countries deal with them in practice. The replies to a questionnaire sent out to member countries are summarised below.

i) General

29. A large number of countries have already had to contend with triangular cases. Some of them (usually those which eliminate double taxation of the permanent establishment by the credit method) seem not to have met too much difficulty dealing with them. Others, however, have and these countries consider that a standard procedure should be included in the Model Convention or Commentaries. With respect to the problem of avoiding double taxation, States may find themselves in one of the following positions:

State P

30. Most of the countries which, as State P, apply the credit method under their domestic law for their own enterprises, also usually grant tax credits to permanent establishments of non-resident enterprises. *Ireland* and the *United Kingdom* grant it only in limited cases (branches of foreign banks for example). The obligation under paragraph 4 of Article 24 is not recognised by all the countries that grant a tax credit under their domestic law.

31. Some countries pointed out that a literal interpretation of paragraph 4 of Article 24 obliges a State to grant a tax credit even if its domestic law does not provide for such a grant to non-residents, since the treaty prevails over domestic legislation. Other States do not agree that such an obligation exists.

32. The first group of countries base their interpretation notably on rulings handed down by their own courts that paragraph 4 of Article 24 is sufficiently clear to be followed to the letter. Such literal interpretation certainly conflicts with paragraph 55 of the Commentary on paragraph 4 of Article 24. But as the Commentary has no legal or statutory force, they cannot be opposed to the rulings handed down by the courts, which consider that they enlarge on the wording of Article 24 rather than being simply interpretative commentaries.

33. Some countries consider on the basis of a decision of the Court of Justice of the European Communities that the principle of freedom of establishment enshrined in Article 52 of the Treaty of Rome requires that a branch be taxed in the same way as a subsidiary. This jurisprudence thus means, they argue, that a branch established in an EEC State and dependent on an enterprise with its headquarters in an EEC State, is entitled to the same tax credits as a subsidiary in the same circumstances.

34. Countries that do not come into one of the above-mentioned categories do not, as a rule, see any possibility of granting a tax credit to a permanent establishment because they consider that the treaty between State P and State S is not applicable. A situation thus arises in which double taxation is not eliminated by State P.

State R

35. States which, as State R, apply the credit method are usually willing to grant a tax credit in respect of tax levied in State P (based on the treaty between State R and State P) but also in respect of tax due in State S (based on the treaty between State R and State S) which has not been credited by State P. For these countries, therefore, the triangular case does not give rise to any particular problems concerning possible double taxation.

36. Countries which, as State R, apply the exemption method in respect of profits by a permanent establishment and grant credits for the taxes due on dividends, interest and royalties received directly from State S do not see any possibility of granting a tax credit based on a treaty between State R and State S because the income from State S is not taxed in State R. For the same reason, State R cannot take into consideration tax due that has not been credited by State P. In these cases, double taxation subsists unless it is eliminated by State P.

State S

37. As regards the situation of State S, virtually every country considers that the treaty between State R and State S is applicable and that tax relief must be granted on the basis thereof. If the claim has to be endorsed, residence as a rule has to be certified by the State R of which the enterprise is a resident.

38. However, certain States say these solutions are not appropriate when State R exempts from tax the profits of the permanent establishment, pointing out, in particular:

- That systematic application of the treaty between State R and State S is bound to incite enterprises in State R – especially banks – to attach income-generating assets to permanent establishments located in the countries which tax such income lightly or not at all. In some cases, such income would thus be exempted from tax in State S, State P and State R.
- That the endorsement procedure is intended, notably, to inform the tax authorities of State R about the nature, amount and source of income received by the taxpayer who requests a certificate of residence. But such information is of no interest to State R when it exempts from tax the profits of a permanent establishment situated

in State P, whereas it would be of interest to State P (unless it is a tax haven), so that State P should at least be concerned in the endorsement procedure.

ii) Position concerning the application of the treaty between State P and State S

39. Some countries consider that the treaty between State P and State S should be applied in triangular cases, either by an amendment to the Model Convention, or by the mutual agreement procedure. The majority of States are strongly opposed to such a solution, above all because such States fear it might encourage "treaty shopping", *i.e.* induce enterprises resident in States which exempt from tax the profits of permanent establishments located outside their territory to attach their income-generating assets to permanent establishments situated in those States that offer the most favourable tax treatment.

C. *Assessment of possible solutions*

i) Elimination of double taxation

The substantive problem

40. As we have seen, State R cannot eliminate double taxation when it exempts from tax the profits of a permanent establishment situated in State P. When it does tax those profits, the tax credit it can grant will usually be limited to the amount of the tax payable. If that amount does not exceed the amount of the tax levied in State P, State R cannot give a tax credit in respect of tax (or tax liability) in State S. Therefore, since State R often has little or no possibility of eliminating double taxation, a solution has to be sought in State P.

41. If State P grants tax credits under its domestic law to its own enterprises, it should also, according to some, grant them to permanent establishments of a resident of State R (see paragraph 51 of the Commentary on Article 24 of the Model Convention). When State P does not grant a tax credit under its domestic law, the question arises of whether it should do so under the treaty between State P and State S or the treaty between State R and State P.

Treaty between State P and State S

42. The Model Convention in principle concerns only residents in one or both States. As the permanent establishment situated in State P is resident in State R, the treaty between State P and State S, in the situation under

consideration, could be applied only if it provided expressly for the treatment of triangular cases.

43. This solution would mean that permanent establishments situated in State P would be treated like residents of State P with respect to the taxation of passive income they received from State S. They could thus put in their own claim for tax relief in State S; State P would have to endorse their claims and grant the same tax credit as to its own enterprises.

44. This method, which would introduce a new element into the treaties, has some advantages but also some drawbacks:

- The problem of tax credit would be solved. Permanent establishments would be treated on an equal footing with enterprises of State P; State P would be able to certify residence and control the taxation of income from State S.
- State S would have to grant the advantages provided for under the treaty concluded with State P to permanent establishments of third States with which it might have no treaty. But the treaty between State P and State S would thus work on the principle of reciprocity that prevails in tax treaties, and the quality of permanent establishment recognised in respect of the taxation of industrial and commercial profits would also have to be recognised in respect of the taxation of passive income.
- Enterprises of a State R would, in the absence of a treaty between State R and State S, be able, after setting up permanent establishments in State P, to take advantage of the treaty between State P and State S; or they might well be tempted to maintain permanent establishments in State P in order to take advantage of a withholding tax rate under the treaty between State P and State S lower than the rate under the treaty between State R and State S.

The danger of "treaty shopping" arises when State R eliminates double taxation of the permanent establishment's profits by the exemption method.

45. States which chose to apply the treaty between State P and State S in their bilateral relations could, for instance, add a provision to this effect to paragraph 4 of Article 24. This was done in a new treaty between *France* and *Italy* that was signed recently. The provision reads as follows:

> When a permanent establishment situated in one State receives dividends, interest or royalties from the other State corresponding to assets or rights effectively attached to its activities, that income shall be taxable in the State of source, in accordance with the provisions of Articles 10, 11 and 12 respectively. The State where the permanent establishment is situated shall eliminate double taxation by the method as provided for in Article ... (the granting of a tax credit). This provision

shall apply whatever the location of the headquarters of the enterprise on which the permanent establishment depends.

46. A large majority of the member countries are opposed to such a solution because it departs too much from the principles underlying the Model Convention and current practices.

Treaty between State R and State P

47. If the treaty between State R and State P is applied, the double taxation problem can only be resolved if State P is obliged to grant to permanent establishments of State R the same treatment that it grants to its own enterprises.

48. For it to be clearly spelt out that permanent establishments in State P enjoy the same advantages as State P's own enterprises, it would have to be agreed that express reference to this treatment be made in the treaty between State R and State P. Possibly, for instance, it could be stipulated in the Article on non-discrimination that permanent establishments of enterprises of State R would be entitled, in the same way as residents of State P, to a tax credit in respect of income from third countries. The amount of the credit, however, would depend on the credit to which enterprises of State P would be entitled, *i.e.* it could not exceed the amount of the withholding tax under the treaty between State P and State S.

49. The following methods could be adopted when the rates of withholding tax under the treaty between State R and State S differ from those under the treaty between State P and State S:

– R-S rate lower than P-S rate:
  State P would have to grant a tax credit at the lower R-S rate in order to avoid granting credit in excess of the tax effectively levied in State S;
– R-S rate higher than P-S rate:
  State P would not grant a credit in respect of the whole amount of withholding tax levied in State S. Thus partial double taxation would subsist, except in those cases where it was eliminated by State R.

50. The method of granting in State P a tax credit for the tax (or some of the tax) levied in State S would involve, in particular, amending paragraph 55 of the Commentary on paragraph 4 of Article 24 of the Model Convention. However, to meet the needs of those countries which consider that the wording of this paragraph does not justify that method, paragraph 4 of Article 24 would also have to be amended by the addition of an express mention of the method(s) recommended in order to eliminate double taxation in triangular cases.

Procedure

51. As indicated above, the elimination of double taxation in application of the treaty between State P and State S would involve certification by the tax authorities of State P. Where the treaty between State R and State P was applied, certification would have to be endorsed by the tax authorities of State R. But for the reasons set out in paragraph 38 of this report, it is not satisfactory for State P to be left out of this procedure:

- first, because State R may issue a certificate that does not directly concern itself but may, on the contrary, provide a loophole for tax avoidance unless State R can be quite sure that the income concerned is taxed in the normal way in State P;
- second, because it is in State P's interest to be given an opportunity to endorse a certificate that informs it of the existence of income in respect of which an enterprise is requesting that the treaty between State R and State S be applied.

52. When the elimination of double taxation results from a combination of the provisions in the R-P and R-S treaties, a recommendation could be added to the Commentary on the Model Convention to the effect that State P, too, should take part in the endorsement procedure and that the information contained in the certificate should be ample enough to meet the requirements of State R and State P.

ii) Tax avoidance

53. The most difficult problem appears to arise in the situation where income arising in State S and paid to a permanent establishment in a tax haven would be taxed very little or not at all.

54. Countries which decided to include in their treaties arrangements to eliminate double taxation by applying the treaty between State P and State S would, of course, have to be careful not to do so if State P did not tax in the normal way income received from outside sources by permanent establishments located in State P.

55. Countries which follow the traditional approach and which apply the treaty between State R and State S may be confronted to the problem created by a permanent establishment situated in a tax haven. A recommendation could be added in the Commentary on the Model Convention, for instance that these countries:

- Include in the treaty between State R and State S a provision stipulating that the advantages of the treaty shall be extended to permanent establishments in third countries only on condition that the said permanent establishments pay tax in the normal way on the

income concerned. However, such a provision would provide a remedy only in the most flagrant cases of abuse, *i.e.* those situations where income from State S is not taxed at all or benefits from a specially favourable rate.

- Include in the treaty between State R and State S a provision whereby State S shall grant relief only on condition that it has also concluded with State P an agreement on the elimination of double taxation (or an agreement on administrative assistance). Relief could, if necessary, be restricted to the amount provided for in that agreement.
- Agree on a general provision enabling State S not to grant tax relief and State R not to certify residence in cases where improper use was being made of the treaty.

56. When an enterprise of State R sets up or transfers funds or activities to a permanent establishment in State P in order to take advantage of more favourable tax treatment there, State R may argue, on the basis of Article 7 of the Model Convention, that the income therefrom is not in fact attributable to that permanent establishment. State R may then tax the income from State S and refuse to endorse the permanent establishment's claims for tax relief.

57. Although this kind of action may not always be successful when the enterprise takes certain precautions in order to hide the fact that it is seeking to avoid tax, it could nevertheless be mentioned in the Commentary on the Model Convention.

IV. CONCLUSION

58. Most member countries would be interested in finding a solution to the problems that can arise in the typical triangular case. First, it is necessary to eliminate a certain amount of discrimination that exists in respect of permanent establishments, resulting from the fact that in some cases a credit is not granted in respect of tax due in State S. Second, typical triangular cases ought to be treated as consistently and uniformly as is compatible with the tax systems in force in the countries concerned. Experience shows that recourse to the mutual agreement procedure is not often practicable when three countries are involved.

59. This report suggests some methods which might make it possible to eliminate double taxation in most cases and to limit the risks of tax avoidance. These methods should be presented in the Commentary on the Model Convention.

V. RECOMMENDATION

60. Since the majority of member countries prefer, on the basis of the basic principle that the treaty applies only to residents of one or the other of the Contracting States, the solution referred to in paragraphs 47 to 50 and reject that referred to in paragraphs 42 to 46, the Committee recommends that the Commentary on the Model Convention be revised as follows:

Proposed changes to the Commentary[2]

1. Paragraph 19 of the Commentary on Article 10 is replaced by the following:

> 19. The paragraph does not settle procedural questions. Each State should be able to use the procedure provided in its own laws. It can either forthwith limit its tax to the rates given in the Article or tax in full and make a refund. *Specific questions arise with triangular cases (see paragraph 55 of the Commentary on Article 24).*

R (11)

2. Paragraph 9 of the Commentary on Article 11 is replaced by the following:

> 9. The paragraph lays down nothing about the mode of taxation in the State of source. It therefore leaves that State free to apply its own laws and, in particular, to levy the tax either by deduction at source or by individual assessment. *Procedural questions are not dealt with in this Article. Each State should be able to apply the procedure provided in its own law. Specific questions arise with triangular cases (see paragraph 55 of the Commentary on Article 24).*

3. Paragraph 5 of the Commentary on Article 12 is replaced by the following:

> 5. The Article deals only with royalties arising in a Contracting State and paid to a resident of the other Contracting State. It does not, therefore, apply to royalties arising in a third State as well as to royalties arising in a Contracting State which are attributable to a permanent establishment which an enterprise of that State has in the other Contracting State (for these cases, *cf.* paragraphs 4 to 6 of the Commentary on Article 21). *Procedural questions are not dealt with in this Article. Each State should be able to apply the procedure provided in its own law. Specific questions arise with triangular cases (see paragraph 55 of the Commentary on Article 24).*

4. The fourth and following sentences of paragraph 10 of the Commentary on Article 23 are deleted.

5. Paragraphs 52 to 55 of the Commentary on Article 24 are replaced by the following paragraphs 52 to 56:

> 52. *If in a Contracting State (A) in which is situated a permanent establishment of an enterprise of the other Contracting State (B) credit for tax levied in a third State (C) can be allowed only by virtue of a convention, then the more general question arises, as to the extension to permanent establishments of the benefit of conventions concluded with third States. This question is examined below, the particular case of dividends, interest and royalties being dealt with in paragraph 53 below.*
>
> ***F. Extension to permanent establishments of the benefit of double taxation conventions concluded with third States***
>
> 53. *When the permanent establishment in a Contracting State of a resident enterprise of another Contracting State receives dividends, interest or royalties from a third State, then the question arises as to whether and to what extent the Contracting State in which the permanent establishment is situated should credit the tax that cannot be recovered from the third State.*
>
> 54. *There is agreement that double taxation arises in these situations and that some method of relief should be found. The majority of member countries are able to grant credit in these cases on the basis of their domestic law or under paragraph 4 of Article 24. States that under their present legislation cannot give credit in such a way or that wish to clarify the situation may wish to supplement the provision in their convention with the Contracting State in which the enterprise is resident by wording that allows the State in which the permanent establishment is situated to credit the tax liability in the State in which the income originates to an amount that does not exceed the amount that resident enterprises in the Contracting State in which the permanent establishment is situated can claim on the basis of the Contracting State's convention with the third State. If the tax that cannot be recovered under the convention between the third State and the State of residence of the enterprise which has a permanent establishment in the other Contracting State is lower than that under the convention between the third State and the Contracting State in which the permanent establishment is situated, then only the lower tax collected in the third State shall be credited. The following addition to Article 24, paragraph 4 after the first sentence, is therefore proposed:*
>
> > *When a permanent establishment in a Contracting State of an enterprise of the other Contracting State receives dividends, interest or royalties from a third State and the right or the asset in respect of which the dividends, interest or royalties are paid is effectively connected with that permanent establishment, the first-mentioned State shall grant a tax credit in respect of the tax paid in the third State on the dividends, interest or royalties, as the case may be, but the amount of such credit shall not exceed the amount*

R (11)

> *calculated by applying the appropriate rate provided for under the convention with respect to taxes on income and on capital between the Contracting State of which the enterprise is a resident and the third State.*

55. *Where a permanent establishment situated in a Contracting State of an enterprise resident of another Contracting State (the State of residence) receives dividends, interest or royalties from a third State (the State of source) and, according to the procedure agreed to between the State of residence and the State of source, a certificate of domicile is requested by the State of source for the application of the withholding tax at the rate provided for in the convention between the State of source and the State of residence, this certificate must be issued by the latter State. While this procedure may be useful where the State of residence employs the credit method, it seems to serve no purposes where that State uses the exemption method as the income from the third State is not liable to tax in the State of residence of the enterprise. On the other hand, the State in which the permanent establishment is located could benefit from being involved in the certification procedure as this procedure would provide useful information for audit purposes. Another question that arises with triangular cases is that of abuses. If the Contracting State of which the enterprise is a resident exempts from tax the profits of the permanent establishment located in the other Contracting State, there is a danger that the enterprise will transfer assets such as shares, bonds or patents to permanent establishments in States that offer very favourable tax treatment, and in certain circumstances the resulting income may not be taxed in any of the three States. To prevent such practices, which may be regarded as abusive, a provision can be included in the convention between the State of which the enterprise is a resident and the third State (the State of source) stating that an enterprise can claim the benefits of the convention only if the income obtained by the permanent establishment situated in the other State is taxed normally in the State of the permanent establishment.*

56. *In addition to the typical triangular case considered here, other triangular cases arise, particularly that in which the State of the enterprise is also the State from which the income ascribable to the permanent establishment in the other State originates (see also paragraph 5 of the Commentary on Article 21). States can settle these matters in bilateral negotiations.*

6. Paragraph 56 and following of the Commentary on Article 24 are renumbered accordingly.

Notes

1. Some member countries (*e.g. Ireland*, *Switzerland* and the *United Kingdom*) do not agree with such an interpretation.
2. Parts in italics indicate proposed additions.

The Tax Treatment of Employees' Contributions to Foreign Pension Schemes

I. INTRODUCTION

1. At its meeting on 24-25 January 1989, the Committee on Fiscal Affairs agreed to a request from Working Party No. 6 that Working Party No. 1 should draft a provision, for inclusion in the Model Convention, dealing with the tax treatment of pension contributions made by persons who render dependent personal services to multinational enterprises whilst they are seconded abroad.

2. This reports considers the form that such a provision might take, and puts forward a suggested provision for inclusion in the Commentary on Article 18.

II. BACKGROUND

3. It is common for staff of multinational enterprises (and particularly for the more senior staff) to be expected from time to time to work outside their home country. Whilst abroad they may continue to be employed by the company to which they rendered dependent personal services in their home country, or they may be employed by an associated company in the host country.

4. Employees who were members of a pension scheme in their home country will often wish to go on contributing to the scheme during their absence abroad. This is both because switching schemes can lead to a loss of rights and benefits, and because many practical difficulties (including exposure to exchange losses) can arise from having pension arrangements in many countries.

5. Before taking up an overseas assignment, employees commonly qualify for tax relief on pension contributions paid in the home country. When assigned abroad, employees in some cases continue to qualify for relief; for instance, where a person remains resident and fully taxable in the home country, he will generally continue to qualify for relief there. But frequently contributions paid in the home country by someone assigned abroad do not qualify for relief under the domestic laws of either the home country or the host country. Where this is the case it can become costly, if not impossible, to maintain membership of a pension scheme in the home country during a foreign assignment.

6. The Model Convention offers no assistance. It defines how pensions should be taxed, but it says nothing about how pension contributions should be treated. In the circumstances, the Committee on Fiscal Affairs decided that a provision dealing with pension contributions of employees assigned abroad should be drafted.

7. However, some delegates considered that there were other, more convenient ways of dealing with the problem than by means of a new treaty provision. *Norway* and *Japan* felt, respectively, that adaptation of the pension scheme to secure deductibility in the host State, or a compensatory amendment to the overall terms of employment, provided a simpler and more expeditious solution to the problem. In addition, domestic legislation in some countries might limit the application of a wide provision; for example in *Belgium*, where only contributions to schemes run by companies established therein are deductible, or in *Ireland*, where deductions are only available for contributions made by Irish residents.

8. Taking these difficulties into account, the Committee concluded that agreement could not be reached on a draft provision and commentary to be added to the Model. The approach favoured by most delegates was to draft explanatory paragraphs and a suggested provision to be included in the Commentary to an existing Article of the Model Convention. Member countries could then include the provision in bilateral treaties if they wished, and were able, to do so. Whilst there were a number of existing commentaries to which the paragraphs on pension contributions could be added, for example those on Articles 7, 15 or 18, the Commentary on Article 18 was considered most appropriate as it also dealt with matters concerning pensions arising out of past employments.

9. When drafting the suggested provision, the Committee decided that contributions to social security schemes should be disregarded. The Committee felt that the right or obligation to join a social security scheme was primarily a matter of social legislation rather than tax law. This note does not therefore deal with contributions to such schemes, but it should be noted that many member countries have entered into bilateral social security totalisation agreements.

10. The Committee also concluded that the tax deductibility from profits of pension contributions made by employers in respect of employees working abroad created no real practical difficulties. It also noted that problems could arise with the treatment by the host State of income accruals in home State pension schemes. However, the Committee decided that, at least for the time being, efforts should be concentrated on drafting a provision in respect of employee contributions only.

11. The majority of delegates were in favour of extending the suggested provision to cover the tax deductibility of pension contributions made by individuals rendering independent personal services abroad. However, this was felt to be beyond the initial objective, although it was agreed that the Commentary should recognise the possibility of extending the suggested provision to cover such contributions in bilateral negotiations.

III. EXISTING TREATIES

12. Although the Model Convention does not contain a provision dealing with pension contributions, seven member countries (*Canada*, *Denmark*, *France*, the *Netherlands*, *Switzerland*, the *United Kingdom* and the *United States*) have negotiated bilateral treaties containing such provisions. All (six) of these provisions provide for the host country in certain circumstances to give tax relief for contributions an employee makes to a pension scheme in his home country. Some of them go further and also deal with contributions paid by individuals performing independent personal services, and with the taxation of employers' contributions as benefits in kind to employees.

13. These provisions are reproduced in Annex A; and a summary of them (employing the headings used in Section VI of this report) is included in Annex B.

IV. AIM OF A PROVISION FOR INCLUSION IN THE COMMENTARY

14. The aim of a suggested provision would be to ensure that, so far as possible, an employee was neither discouraged nor encouraged from taking up an overseas assignment within the meaning of Article 15 of the Model by the tax treatment of contributions made to a home country pension scheme by an employee working abroad. It follows, therefore, that the provision should seek, first, to determine the general equivalence of pension plans in the two countries, and then to establish limits to the deductibility of employee contributions that may be based on the limits in the laws of both countries.

V. FORM OF A PROVISION FOR INCLUSION IN THE COMMENTARY

15. In principle, a provision could take one of two basic forms. It could look for relief for contributions to a home country pension scheme to be given by either:

- the home country; or
- the host country.

16. At an economic level, the argument for looking to the host country is that this is where the economic activities giving rise to the contributions are carried out. Against that, the argument is that the home country should give relief as this is where the scheme is situated and where the source of the future pension will be.

17. At a practical level, where (as is generally the case) countries give relief by way of a deduction in computing taxable income, looking to the home country might not be effective, since the employee may not have any taxable

income in the home country against which relief could be given. This might be because the length of the assignment was such that the employee ceased to be resident in the home country, or because although remaining resident in the home country the employee was not taxable there because it was an exemption country.

18. The practical considerations are more complicated where an employee remains resident in the home country and it is a credit country. If relief were given in the home country rather than the host country there might be an excess of foreign tax that could not be relieved in the home country. This would be because the tax base was wider in the host country than in the home country, meaning that (depending on the tax rates in the two countries) more tax may be payable in the host country than in the home country.

19. However, if relief were only given in the host country, the benefit of the relief would be dissipated by the home country taxing the remuneration in full (*i.e.* including that part relieved in the host country). However, this would not generally be a problem in practice, as credit countries sometimes exempt under their domestic law the foreign earnings of residents, and where this is not the case, relief for pension contributions would normally be due in the home country under its domestic laws.

20. Practical considerations therefore suggest that it would be sensible for the provision to concentrate on looking to the host country to give relief. This is the position adopted in the six provisions negotiated to date.

VI. CONDITIONS OF A PROVISION FOR INCLUSION IN THE COMMENTARY

21. If it is agreed that the suggested provision should concentrate on providing relief in the host country for employee contributions to a home country pension scheme, it would then be for consideration what precise conditions would need to be included in the provision for relief to be due.

22. Possible qualifying conditions can be divided into three categories. These concern the characteristics of:

a) the employee;

b) the contributions; and

c) the relief.

Characteristics of the employee

Residence test

23. There are two aspects to this:

- the first concerns the employee's residence status before working in the host country; and
- the second concerns his residence status while working there.

24. First, consideration needs to be given to the employee's residence status before working in the host country. In order to limit the provision to secondees, it would be necessary to ensure that the employee was not resident in the host country prior to working there. This would cover employees transferred from a third country.

25. Since it is not unusual for an employee to be seconded to a number of different countries in succession, member countries may feel that it would be appropriate for the suggested provision to be limited simply to employees who were not resident in the host country before taking up employment there within the meaning of Article 15 of the Model Convention. Of the six present provisions, five cover employees coming from a third country as well as employees coming from the treaty partner (the remaining one has no restriction about prior residence).

26. Second is the question of the employee's residence status while working in the host country. The consideration here would be whether all employees working abroad in the host country should be covered by the provision or just those who become resident there. Of the six present provisions, only two apply to employees whose temporary presence does not amount to residence.

27. In many cases employees working abroad who remain resident in their home country will continue to qualify for relief in the home country. But this will not be so in all cases. For instance, where the home country is an exemption country, a resident may not qualify for relief there if he is taxable in the host country on earnings from working in that country. There would therefore seem to be a case for the provision to apply to non-residents working in the host country as well as to residents. However, domestic legislation in some member countries would not allow a deduction for payments to a pension scheme by non-residents so these countries would, presumably, seek to restrict the suggested provision to individuals who became resident in the host country.

28. In addition, where relief was due in the home country, there could be foreign tax credit problems if the home country was a credit country and the host country did not give relief (see paragraph 18 above).

29. Some member countries tax non-residents at a special low rate and may not, therefore, wish to give relief to non-residents. The suggested provision, as drafted, applies to non-residents but the addition to the Commentary can make it clear that countries with a special regime for non-residents, or which are limited by domestic legislation, might, in bilateral negotiations, wish to restrict such a provision to residents.

Nationality/citizenship test

30. A further consideration would be whether the provision should be restricted to employees who are not nationals of the host country. Three of the six present provisions are restricted in this way.

31. If an individual is a national of the country in which he is working, it may be questionable whether that country is a host country rather than his home country. Including host country nationals in the provision might allow employees who were not genuine secondees, to circumvent the host country's domestic rules on relief for pension contributions.

32. Suppose for instance that the rules regarding maximum pension contributions and benefits were tighter for schemes in the host country than in the home country. To circumvent the host country rules, a company situated therein might set up a company in the home country. The host country company might then transfer its employees to the home country company, which would then second them back to the host country company. In this way the employees would be able to join a pension scheme in the home country and benefit from its more relaxed rules compared with those of host country schemes, but nevertheless qualify for relief in the host country.

33. Assuming the suggested provision was restricted to employees who were not resident in the host country before exercising the employment there (as is proposed in the suggested provision attached to this note), it could be argued that the possibility of artificial arrangements of the kind described above would be limited. But the possibility would remain of individuals dropping out of residence in the host country for only a short period, in order to come within the provision.

34. The requirement considered in paragraphs 43 to 46 below – that for contributions to a home country scheme to qualify for relief in the host country, the scheme would have to generally correspond to schemes recognised for tax purposes in the host country – would reduce the scope for abuse. But the thought behind the requirement is that a scheme should be broadly similar, rather than identical, to host country schemes.

35. Any limit on the length of time an employee could qualify for relief in the host country would also reduce the scope for abuse. This possibility is considered in paragraphs 38 and 39 below.

36. The argument against including a nationality test is that it could work against the free movement of genuine secondees. For instance, the best qualified individual from within the head office of a multinational group to be seconded to another country is frequently one who originally came from that country, since he will have the necessary background and linguistic qualifications. It would arguably be wrong to rule out relief for such a person on the grounds that his home was really in the country to which he was seconded, particularly if he had left that country some years before.

37. The Committee, with one exception, did not support the inclusion of a nationality test. The suggested provision, as drafted, does not include a nationality test but it is recognised that countries may wish in bilateral negotiations to supplement the provision with one.

Time limit

38. There is a case for arguing that the provision should cease to apply if the employee continues to work in the host country for more than a specified length of time. This would be on the basis that a point comes when an employee may have worked so long in the host country that in effect it becomes his home country. Indeed, *Ireland* already restricts relief for contributions to foreign employer/employee schemes to cases where the seconded employee is present in *Ireland* on a temporary basis.

39. Only two of the present provisions contain such a limitation (the time limit in them being 60 months). If a nationality test was included (as discussed in paragraphs 30 to 37 above) member countries may feel that a time limit was unnecessary. It may, however, be felt appropriate to include a time limit if it was decided that host country nationals should be able to qualify for relief under the provision. The inclusion of a time limit has been left as an option.

Characteristics of the contributions

Scheme recognised in the home country

40. The aim of the provision is, so far as possible, to ensure that contributions are neither more nor less favourably treated for tax purposes than they would be if the employee was resident in his home country.

41. One way of doing this might be to limit the provision to contributions made to schemes that the home country recognises for tax purposes as pension schemes.

42. Five of the present provisions are restricted to contributions to schemes recognised for tax purposes in the home country. In the suggested provision, a pension scheme is "recognised for tax purposes" in the home State if the contributions to the scheme would qualify for tax relief in that State. The

diversity of treatment accorded to pensions schemes by individual member countries is such that any further refinement may be best left to bilateral negotiations, where specific references to domestic legislation, or references to "occupational" or "employer/employee" schemes could be used.

Corresponding schemes

43. Five of the present provisions contain a further restriction limiting relief to contributions made to home country schemes which correspond to schemes recognised for tax purposes in the host country. This is on the premise that only contributions to recognised schemes qualify for tax relief.

44. A limitation of this kind would not of course necessarily secure equivalent tax treatment of contributions paid when an employee was working abroad and contributions paid when he was working in the home country. If the host country's rules for recognising pension schemes were narrower than those of the home country, the employee could find that his contributions to his home country pension scheme were less favourably treated when he was working in the host country than when working in the home country. Much would depend on how restrictively the requirement for a scheme to correspond was interpreted.

45. However, member countries felt that it would be going too far to have to give relief for contributions to schemes which did not – at least broadly – correspond with domestically recognised schemes. To do so would mean that the amount of relief due in the host country would become dependent on the legislature in the home country. In addition, it could be hard to defend treating employees working side by side differently depending on whether their pension scheme was at home or abroad (and if abroad, whether it was in one country rather than another). The following example illustrates this difficulty. The home country allows relief for pension contributions subject to a limit of 18% of income. The host country allows relief subject to a limit of 20% of income. The suggested provision would require the host country to allow relief up to its domestic limit of 20%. Countries wishing to adopt the limit in the home country would need to amend the wording of the provision appropriately.

46. The present provisions, which are limited to corresponding schemes, provide that it is for the competent authority of the host country to determine whether the scheme in the home country corresponds to recognised schemes in the host country. This seems a sensible arrangement if a corresponding scheme limitation is thought desirable. The Committee noted that there could be wide divergences between the tax treatment of pension schemes in individual countries but felt that, nevertheless, it should be possible to

identify schemes which broadly, or generally, corresponded with host country schemes.

Existing membership

47. It could be argued that the provision should apply to contributions to new pension schemes which an employee joins while abroad as well as to contributions to schemes of which he was a member before taking up his foreign assignment. This would be in line with seeking to ensure that the employee was not prejudiced by working abroad rather than by continuing to work at home (where – subject to the domestic law of the home country – he would be able to join new schemes and qualify for relief on contributions to them).

48. However, member countries felt that covering new as well as existing schemes would be going too far. The principal difficulty with the present position concerns contributions to existing schemes, and it was felt that any suggested provision should be limited to such schemes. Of the six present provisions, five are limited to contributions to schemes to which the employee was contributing before he was assigned abroad.

49. In some member countries, when a company is taken over by another company, it is common for the existing pension scheme to be ended and a new one opened. In such cases, member countries may wish, in bilateral negotiations, to supplement the suggested provision to cover such substitute schemes.

Characteristics of relief

50. The question here is, assuming that the employee and the contributions fall within the provision, what relief should the host country give? This would include matters such as:

- whether contributions should qualify for relief in full, or only in part; and
- whether relief should be given as a deduction in computing taxable income (and if so, which income – *e.g.* just employment income or all income) or as a tax credit.

51. The considerations here are similar to those discussed in paragraphs 43 to 46 about whether a home country scheme would need to correspond to a host country scheme in order for contributions to be allowable. For similar reasons, member countries felt that relief should be given in a corresponding way to the manner in which relief would be given if the contributions were to a scheme in the host country. All six of the present provisions are drawn in this way.

VII. OTHER CONSIDERATIONS

52. There are two further issues which require consideration.

53. First, being assigned to work abroad may not just mean that an employee ceases to qualify for tax relief on contributions to a pension scheme in the home country, it may also mean that contributions to the pension scheme by the employer are regarded as the employee's income for tax purposes. Three of the six present provisions therefore specify that, where the various conditions of the provisions are met, employers' contributions shall not be regarded as being taxable benefits for the employees.

54. In some countries, however, employees are taxed on employers' contributions to domestic schemes. The suggested provision does not, therefore, cover the treatment of employers' contributions to foreign schemes in the context of the employees' tax liability, although negotiators may wish to extend the provision in individual treaties to provide the same treatment as is given to contributions to domestic schemes.

55. Second, some home countries do not permit employees to remain in home country pension schemes while they are working abroad. In such circumstances a provision of the kind considered in this note would have no value. The question of what relief to give in respect of contributions would not arise, since there would be no contributions.

56. It would therefore be for consideration whether a provision should also specify circumstances in which an employee working abroad should be able to remain a member of a home country pension scheme. However, none of the existing provisions cover this point and member countries felt that this was an area best left to domestic law.

VIII. SUGGESTED PROVISION

57. Drawing on these considerations, a suggested provision and paragraphs for addition to the Commentary on Article 18 have been drafted (*cf.* Annex C).

58. In the suggested provision, relief is restricted to contributions to home country pension schemes which:

- the employee was contributing to before beginning to exercise, in the host country, an employment within the meaning of Article 15 of the Model Convention;
- are recognised for tax purposes in the home country; and
- generally correspond to schemes recognised for tax purposes in the host country.

59. The provision is restricted to employees who were not resident in the host country before beginning to exercise the employment there, but it leaves

open the question of whether it should be restricted to employees who are not nationals of the host country.

60. Relief for employee contributions which fell within the provision would be given by the host country as if the contributions were paid to a scheme recognised by the host country.

61. The draft provision does not:

- confine itself to residents working in the host country;
- place a time limit on how long an employee could qualify for relief (but it might be felt that it would be appropriate to do so if it was decided not to include a nationality test); or
- require home countries to allow employees working abroad to be able to remain members of home country schemes.

IX. CONCLUSION

62. This report considers the format of a provision and related commentaries that would be included in the Commentary on Article 18 of the Model Convention, and that would deal with the tax treatment of employees' contributions to foreign pension schemes. As a result of the discussion on the suggested provision, the Committee recommends that the attached paragraphs (Annex C) be inserted in the Model Convention, in the existing Commentary on Article 18.

ANNEX A

PROVISIONS IN BILATERAL TAX CONVENTIONS

1. Denmark-Switzerland (1973)

Article 28 (Miscellaneous Rules)

"3. Payments by Swiss nationals resident in Denmark to the Swiss State old age, dependents' and disablement insurance scheme may be deducted in Denmark from taxable income.

4. Payments which an individual resident in one of the Contracting States, who is not a national of that State, makes to a personnel fund recognised as such for tax purposes in the other Contracting State, to which he already belonged before he came resident in the first-mentioned Contracting State, may be deducted from taxable income in the first-mentioned Contracting State in the same way as payments to a personnel fund recognised as such for tax purposes in that State: payments by the employer shall not be deemed in this case to be taxable income of the employee."

2. Denmark-United Kingdom (1980)

Article 28 (Miscellaneous Rules)

"3. Payments made by an individual who is resident in a Contracting State, but is not a national of that State, to a pension scheme established in and recognised for tax purposes in the other Contracting State may be relieved from tax in the first-mentioned State provided that:

a) The individual was contributing to the pension scheme before he became a resident of the first-mentioned State; and

b) The pension scheme is accepted by the competent authority of that State as corresponding to a pension scheme recognises as such for tax purposes by that State.

In such a case relief from tax shall be given in the same way as if the pension scheme was recognised as such by State and payments to the pension scheme by the enterprise paying his remuneration shall not be deemed to be taxable income of the individual."

3. France-United States (1984)

Article 19 (Private pensions and annuities)

"5. *a*) Contributions paid by, or on behalf of an individual resident of a Contracting State, who is not a citizen of that State, to pension, profit-sharing, and other retirement plans that are recognised for tax purposes

in the other Contracting State will be treated in the same way for tax purposes in the first-mentioned State as contributions paid to pension, profit-sharing and other retirement plans that are recognised for tax purposes in the first-mentioned State, provided that the competent authority of the first-mentioned State agrees that the plans correspond to pension, profit-sharing or other retirement plans recognised for tax purposes by that State."

4. *France-Canada (1987)*[1]

Article 29 (Miscellaneous Rules)

"5. Contributions in a year in respect of services rendered in that year paid by, or on behalf of, an individual who is a resident of one of the Contracting States or who is temporarily present in that State, to a pension plan that is recognised for tax purposes in the other Contracting State shall, during a period not exceeding in the aggregate 60 months, be treated in the same way for tax purposes in the first-mentioned State as a contribution paid to a pension plan (that is, in the case of Canada, not an employee benefit plan) that is recognised for tax purposes in that first-mentioned State, provided that:

a) Such individual was contributing to the pension plan before he became a resident of or temporarily present in the first-mentioned State; and

b) The competent authority of the first-mentioned State agrees that the pension plan corresponds to a pension plan recognised for tax purposes by that State.

For the purposes of this paragraph, "pension plan" includes a pension plan created under a public social security system."

5. *France-United Kingdom (1987)*

Article 25

"8. Payments made by an individual who is a resident of a Contracting State to a pension schemes established in the other Contracting State provided that:

a) the individual was contributing to the pension scheme before he became a resident of the first-mentioned State; and

1 The same provision is found in paragraph 4 of Article 24 of the Canada-Netherlands tax convention (1986).

b) the pension scheme is accepted by the competent authority of that State as corresponding to a pension scheme recognised as such for tax purposes by that State.

In such case relief from tax shall be given in the same way as if the pension scheme was recognised as such by that State and payments to the pension scheme by the enterprise paying his remuneration shall not be deemed to be taxable income of the individual."

ANNEX B

SUMMARY OF THE SIX PROVISIONS ALLOWING RELIEF FOR PENSION

	Characteristics of employee			Characteristics of contribution			Characteristics of relief		
	Nationality citizenship test	Residence test A Prior to working in host country	Residence test B While working in host country	Time limit	Scheme recognised in home country	Scheme corresponds to recognised scheme in home country	Existing membership only	Relief as if host country	Employers' contributions not treated as taxable income of the employee
Canada Netherlands		X	X[1]	X	X	X	X	X	[2]
Denmark Switzerland	X	X	X		X		X	X	X
Denmark United Kingdom	X	X	X		X	X	X	X	X
France Canada		X	X[1]	X	X	X	X	X	[2]
France United States	X		X		X	X		X	
France United Kingdom		X	X			X	X	X	X

1. Also applies to non-residents who are temporarily present.
2. Where Canada is the host country the employer's contribution is exempt from tax in the hands of the employee.

ANNEX C

SUGGESTED ADDITIONS TO THE COMMENTARY ON ARTICLE 18 CONCERNING THE TAX TREATMENT OF CONTRIBUTIONS TO FOREIGN PENSION SCHEMES

Add the following after paragraph 3 of the existing Commentary on Article 18 of the Model Convention:

The tax treatment of contributions to foreign pension schemes

A. General comments

4. It is characteristic of multinational enterprises that their staff are expected to be willing to work outside their home country from time to time. The terms of service under which staff are sent to work in other countries are of keen interest and importance to both the employer and the employee. One consideration is the pension arrangements that are made for the employee in question.

5. Employees sent abroad to work will often wish to continue contributing to a pension scheme in their home country during their absence abroad. This is both because switching schemes can lead to a loss of rights and benefits, and because many practical difficulties can arise from having pension arrangements in a number of countries.

6. The tax treatment accorded to pension contributions of employees who are assigned to work outside their home country varies both from country to country and depending on the circumstances of the individual case. Before taking up an overseas assignment, employees commonly qualify for tax relief on pension contributions paid in the home country. When assigned abroad, employees in some cases continue to qualify for relief. Where an individual, for example, remains resident and fully taxable in the home country, pension contributions made to a pension scheme established in the home country will generally continue to qualify for relief there. But frequently, contributions paid in the home country by an individual assigned to work abroad do not qualify for relief under the domestic laws of either the home country or the host country. Where this is the case it can become expensive, if not prohibitive, to maintain membership of a pension scheme in the home country during a foreign assignment. Paragraph 11 below suggests a provision which member countries can, if they wish, include in bilateral treaties to provide reliefs for the pension contributions of employees assigned to work outside their home country.

7. However, some member countries may not consider that the solution to the problem lies in a treaty provision, preferring, for example, the pension scheme to be amended to secure deductibility of contributions in the host State. Other countries may be opposed to including the provision in treaties where domestic legislation allows deductions only for contributions paid to residents. In such cases it may be inappropriate to include the suggested provision in a bilateral treaty.

8. The suggested provision does not address itself to contributions made to social security schemes (general State pension schemes dependent upon contribution records, whether or not contributors are employees) as the right or obligation to join a social security scheme is primarily a matter of social legislation rather than tax law. Many member countries have entered into bilateral social security totalisation agreements which may help to avoid the problem with respect to contributions to social security schemes. The provision also does not contain provisions relating either to the deductibility by the employer of employer pension contributions in respect of employees working abroad or to the treatment of income accrued within the plan. All of these issues can be dealt with in bilateral negotiations.

9. The provision is confined to the tax treatment of contributions to pension schemes by or on behalf of individuals who exercise employments within the meaning of Article 15 away from their home State. It does not deal with contributions by individuals who render independent personal services within the meaning of Article 14. However, member countries may wish, in bilateral negotiations, to agree on a provision covering individuals rendering services within both Article 14 and Article 15.

B. Aim of the provision

10. The aim of the provision is to ensure that, as far as possible, an employee is not discouraged from taking up an overseas assignment by the tax treatment of contributions made to a home country pension scheme by an employee working abroad. The provision seeks, first, to determine the general equivalence of pension plans in the two countries and then to establish limits to the deductibility of employee contributions based on the limits in the laws of both countries.

C. Suggested provision

11. The following is the suggested text of the provision that could be included in bilateral conventions to deal with the problem identified above:

a) Contributions borne by an individual who renders dependent personal services in a Contracting State to a pension scheme established in and recognised for tax purposes in the other

Contracting State shall be deducted, in the first-mentioned State, in determining the individual's taxable income, and treated in that State, in the same way and subject to the same conditions and limitations as contributions made to a pension scheme that is recognised for tax purposes in that first-mentioned State, provided that:

i) the individual was not a resident of that State, and was contributing to the pension scheme, immediately before he began to exercise employment in that State; and

ii) the pension scheme is accepted by the competent authority of that State as generally corresponding to a pension scheme recognised as such for tax purposes by that State.

b) For the purposes of sub-paragraph *a*):

i) the term "a pension scheme" means an arrangement in which the individual participates in order to secure retirement benefits payable in respect of the dependent personal services referred to in sub-paragraph *a*); and

ii) a pension scheme is recognised for tax purposes in a State if the contributions to the scheme would qualify for tax relief in that State.

12. Sub-paragraph *a*) of the suggested provision lays down the characteristics of both the employee and the contributions to which the provision applies. It also provides the principle that contributions borne by an individual rendering dependent personal services within the meaning of Article 15 in one Contracting State (the host State) to a defined pension scheme in the other Contracting State (the home State) are to be relieved from tax in the host State, subject to the same conditions and limitations as relief for contributions to domestic pension schemes of the host State.

13. Relief for contributions to the home country pension scheme under the conditions outlined can be given by either the home country, being the country where the pension scheme is situated or by the host country, where the economic activities giving rise to the contributions are carried out.

14. A solution in which relief would be given by the home country might not be effective, since the employee might have no or little taxable income in that country. Practical considerations therefore suggest that it would be preferable for relief to be given by the host country and this is the solution adopted in the suggested provision.

15. In looking at the characteristics of the employee, sub-paragraph *a*) makes it clear that, in order to get the relief from taxation in the host State, the employee must not have been resident in the host State immediately prior to working there.

16. Sub-paragraph *a*) does not, however, limit the application of the provision to secondees who become resident in the host State. In many cases employees working abroad who remain resident in their home State will continue to qualify for relief there, but this will not be so in all cases. The suggested provision therefore applies to non-residents working in the host State as well as to secondees to the host State who attain residence status there. In some member countries the domestic legislation may restrict deductibility to contributions borne by residents, and these member countries may wish to restrict the suggested provision to cater for this. Also, States with a special regime for non-residents (*e.g.* taxation at a special low rate) may, in bilateral negotiations, wish to agree on a provision restricted to residents.

17. In the case where individuals temporarily cease to be resident in the host country in order to join a pension scheme in a country with more relaxed rules, individual States may want a provision which would prevent the possibility of abuse. One form such a provision could take would be a nationality test which could exclude from the suggested provision individuals who are nationals of the host State.

18. As it is not unusual for employees to be seconded to a number of different countries in succession, the suggested provision is not limited to employees who are residents of the home State immediately prior to exercising employment in the host State. The provision covers an employee coming to the host State from a third country as it is only limited to employees who were not resident in the host country before taking up employment there. However, Article 1 restricts the scope of the Convention to residents of one or both Contracting States. An employee who is neither a resident of the host State nor of the home State where the pension scheme is established is therefore outside the scope of the Convention between the two States.

19. The suggested provision places no limits on the length of time for which an employee can work in a host State. It could be argued that, if an employee works in the host State for long enough, it in effect becomes his home country and the provision should no longer apply. Indeed, some host countries already restrict relief for contributions to foreign employee/employer pension schemes to cases where the seconded employees are present on a temporary basis.

20. In addition, the inclusion of a time limit may be helpful in preventing the possibility of abuse outlined in paragraph 17 above. In bilateral negotiations, individual countries may find it appropriate to include a limit on the length of time for which an employee may exercise an employment in the host State after which reliefs granted by the suggested provision would no longer apply.

21. In looking at the characteristics of the contributions, sub-paragraph *a*) provides a number of tests. It makes it clear that the provision applies only to

contributions borne by an individual to a pension scheme established in and recognised for tax purposes in the home State. The phrase "recognised for tax purposes" is further defined in subdivision *b*)(*ii*) of the suggested provision.

22. The second test applied to the characteristics of the contributions is that the contributions should be made to a home State scheme recognised by the competent authority of the host State as generally corresponding to a scheme recognised as such for tax purposes by the host State. This operates on the premise that only contributions to recognised schemes qualify for relief in member countries. This limitation does not, of course, necessarily secure equivalent tax treatment of contributions paid where an employee was working abroad and of contributions while working in the home country. If the host State's rules for recognising pension schemes were narrower than those of the home State, the employee could find that contributions to his home country pension scheme were less favourably treated when he was working in the host country than when working in the home country.

23. However, it would not be in accordance with the stated aim of securing, as far as possible, equivalent tax treatment of employee contributions to give relief for contributions which do not – at least broadly – correspond to domestically recognised schemes. To do so would mean that the amount of relief in the host State would become dependent on legislation in the home State. In addition, it could be hard to defend treating employees working side by side differently depending on whether their pension scheme was at home or abroad (and if abroad, whether it was one country rather than another). By limiting the suggested provision to schemes which generally correspond to those in the host country such difficulties are avoided.

24. The suggested provision makes it clear that it is for the competent authority of the host State to determine whether the scheme in the home State generally corresponds to recognised schemes in the host State. Individual States may wish, in bilateral negotiations, to establish what interpretation the competent authority places on the term "generally corresponding"; for example how widely it is interpreted and what tests are imposed.

25. The contributions covered by the provision are limited to payments to schemes to which the employee was contributing before he began to exercise his employment in the host State. This means that contributions to new pension schemes which an employee joins while in the host State are excluded from the suggested provision.

26. It is, however, recognised that special rules may be needed to cover cases where new pension schemes are substituted for previous ones. For instance, in some member countries the common practice may be that, if a company employer is taken over by another company, the existing company pension

scheme for its employees may be ended and a new scheme opened by the new employer. In bilateral negotiations, therefore, individual States may wish to supplement the provision to cover such substitution schemes.

27. Sub-paragraph *a*) also sets out the relief to be given by the host State if the characteristics of the employee and the contributions fall within the terms of the provision. In brief, the relief is to be given in a way which corresponds to the manner in which relief would be given if the contributions were to a scheme established in the host State.

28. This measure of relief does not, of course, necessarily secure equivalent tax treatment given to contributions paid when an employee is working abroad and contributions paid when he is working in the home country. Similar considerations apply here to those discussed in paragraphs 22 and 23 above. The measure does, however, ensure equivalent treatment of the contributions of colleagues. The following example is considered. The home country allows relief for pension contributions subject to a limit of 18% of income. The host country allows relief subject to a limit of 20%. The suggested provision in paragraph 11 would require the host country to allow relief up to its domestic limit of 20%. Countries wishing to adopt the limit in the home country would need to amend the wording of the provision appropriately.

29. The amount and method of giving the relief would depend upon the domestic tax treatment of pension contributions by the host State. This would settle such questions as whether contributions qualify for relief in full, or only in part, and whether relief should be given as a deduction in computing taxable income (and if so, which income, *e.g.* only employment income or all income) or as a tax credit.

30. Being assigned to work abroad may not only mean that an employee's contributions to a pension scheme in his home country cease to qualify for tax relief. It may also mean that contributions to the pension scheme by the employer are regarded as the employee's income for tax purposes. In some member countries employees are taxed on employer's contributions to domestic schemes whilst working in the home country whereas in others these contributions remain exempt. The provision, therefore, is silent on the treatment of such contributions, although member countries may wish to extend the suggested provision in bilateral treaties, to ensure that employers contributions in the context of the employees' tax liability are accorded the same treatment that such contributions to domestic schemes would receive.

31. Subdivision *b*)(*i*) defines a pension scheme for the purposes of sub-paragraph *a*). It makes it clear that, for these purposes, a pension scheme is an arrangement in which the individual who makes the payments participates in order to secure retirement benefits. These benefits must be payable in respect of the exercise of the employment in the host State.

32. Subdivision *b*)(*i*) refers to the participation of the individual in the pension scheme in order to secure retirement benefits. This definition is intended to ensure that the proportion of contributions made to secure benefits other than periodic pension payments on retirement, *e.g.* a lump sum on retirement, will also qualify for relief under the provision.

33. The initial definition of a pension scheme is "an arrangement". This is a widely drawn term, the use of which is intended to encompass the various forms which pension schemes may take in individual member countries.

34. Although subdivision *b*)(*i*) sets out that participation in this scheme has to be by the individual who exercises the employment referred to in sub-paragraph *a*), there is no reference to the identity of the recipient of the retirement benefits secured by participation in the scheme. This is to ensure that any proportion of contributions intended to generate a widow or dependent's pension may be eligible for relief under the suggested provision.

35. The definition of a pension scheme makes no distinction between pensions paid from State-run occupational pension schemes and similar privately-run schemes. Both are covered by the scope of the provision. Any pensions, such as pensions from general State pension schemes dependent on contribution records whether or not contributors are employees, are excluded from the provision as the individual will not contribute to such schemes in order to receive benefits payable in respect of dependent personal services rendered.

36. Subdivision *b*)(*ii*) further defines the phrase "recognised for tax purposes". As the aim of the provision is, so far as possible, to ensure that contributions are neither more nor less favourably treated for tax purposes than they would be if the employee was resident in his home State, it is right to limit the provision to contributions which would have qualified for relief if the employee had remained in the home State. The provision seeks to achieve this aim by limiting its scope to contributions made to a scheme only if contributions to this scheme would qualify for tax relief in that State.

37. This method of attempting to achieve parity of treatment assumes that in all member countries only contributions to recognised pension schemes qualify for relief. The tax treatment of contributions to pension schemes under member countries' tax systems may differ from this assumption. It is recognised that, in bilateral negotiations, individual countries may wish to further define the qualifying pension schemes in terms that match the respective domestic laws of the treaty partners.

Attribution of Income to Permanent Establishments

(adopted by the OECD Council on 26 November 1993)

ANNEX III. Proposed Modifications to the Commentary on Article 7 of the Model Tax Convention . . . . R(13)-32

I. INTRODUCTION

1. Article 7 of the OECD Model Tax Convention provides that the business profits of an enterprise of one State may be taxed in another State, but only to the extent that such profits are attributable to a permanent establishment situated therein. The determination of the income attributable to a permanent establishment can give rise, however, to an element of uncertainty. This is why the Committee on Fiscal Affairs decided to examine the rules concerning the determination of the income of permanent establishments in order to clarify their application. The work of the Committee has benefited from the work done by the International Fiscal Association (IFA) at its 1986 Congress in New York, the first topic of which was "The transfer of assets into and out of a taxing jurisdiction". Discussions on this topic focused on the tax consequences of transfers of goods within a single legal entity, *i.e.* between a firm's head office and its permanent establishments located outside its country of residence, or between different permanent establishments of the same enterprise; the IFA general report and recommendation show that this particular aspect of the determination of the income of a permanent establishment is especially troublesome.

2. Discussions within the Committee and in IFA identified the following concerns:

a) The transfer of goods and services between tax jurisdictions may give rise to taxation which is not necessarily based on actual profits.

b) Uncertainty about the taxation of permanent establishments is heightened by the fact that the Commentary on Article 7 of the OECD Model Tax Convention suggests a duality of approach whereby tax authorities may in some instances treat a permanent establishment very much as if it were an independent entity legally separate from the enterprise of which it is part and in other instances treat it simply as a sub-division of one and the same enterprise. In the first instance, internal transfers will be evaluated according to the arm's length principle by attributing to the transferring part of the entity the profit which it might have been expected to make had it been dealing with a wholly independent enterprise. In the second instance it may be considered appropriate to evaluate the transfer by reference only to its historic cost. In principle it may be argued that this duality is justifiable both because of the legal limits of any agreement between a permanent establishment and the rest of the enterprise of which it forms part and by reference to the nature of the particular transaction under consideration. Nevertheless, the fact remains that this duality of approach leads to uncertainty which may in itself lead to results incompatible with the underlying principles of double taxation

agreements (the avoidance of economic double taxation and a fair allocation of taxation rights between countries) where the outward transfer country taxes a given transfer of goods or services on the basis of a price which includes a profit while the inward transferring country takes into account only the residual accounting value or historic cost price (similar problems may arise where the situation is reversed).

The problem is more acute where the country of residence of the enterprise gives relief for the tax levied by the host country of the permanent establishment by exempting those profits from tax. In this situation, the computation of the exempted profits and the computation of the profits as taxed by the host country may be inconsistent, which may lead to either economic double taxation or to under taxation. Where the country of residence of the enterprise gives relief by the credit method, a significant problem will only arise if it takes the view that the host country is levying tax on the enterprise in a manner which is inconsistent with the terms of the relevant bilateral treaty. In such a case, the country of residence may be reluctant to give full credit for the tax levied by the host country and economic double taxation may arise. There is however usually no danger of economic non-taxation since, if the host country levies tax on a more limited basis than the country of residence would consider appropriate, this only results in the reduction of the amount of tax credit which the country of residence has to grant against its own taxes.

c) This uncertainty is accentuated where a permanent establishment (for example, a construction site) has quite a short life so that it cannot therefore be argued that over a period of years the potential distortions favourable or unfavourable to the taxpayer might be offset.

d) The existence of two different methods for eliminating double taxation, the right of each country to define profits earned abroad according to its domestic law, as well as the different approaches to the determination of the timing of the realisation of a gain or loss and to foreign currency translation can potentially result in overtaxation and undertaxation.

e) Lastly, the differences that exist in most countries between the taxation of resident companies and of permanent establishments of foreign enterprises raise the issue of whether the non-discrimination principle is being observed and whether these differences of treatment are in fact due to the special nature of the permanent establishment.

This Report discusses these problems and puts forward proposed modifications to the Commentary on Article 7 of the OECD Model Tax Convention on Income and on Capital. These modifications will be incorporated into the next update of the Model which will be issued early in 1994. The structure of the Report is as follows: Section II discusses the issues that were identified in replies to a questionnaire sent out to member countries and analyses these replies, Section III sets out the conclusions of this analysis and annexes provide separately the questionnaire, the Resolution adopted by IFA at its 1986 Congress and the proposed changes to the Commentary on Article 7.

II. ISSUES RAISED BY THE TAX TREATMENT OF PERMANENT ESTABLISHMENTS

3. The Committee on Fiscal Affairs has addressed the question of the international apportionment of income between head offices and their permanent establishments several times between 1984 and 1986.

4. Following preparatory work carried out for the 1986 IFA Congress and the recommendations adopted at that Congress (see Annex I), the Committee instructed an *ad hoc* group to draw up a questionnaire on the subject. The questionnaire was sent out in February 1989 to all delegates. Seventeen countries replied to the questionnaire and their replies are analysed below.

Analysis of the replies received and comments on them

5. Of the seventeen replying countries, eleven (*Australia, Canada, Finland, Greece, Italy, New Zealand, Portugal, Spain, Sweden, the United Kingdom* and the *United States*) use the credit method of eliminating international economic double taxation and six (*Austria, Belgium, France, Germany, Netherlands* and *Switzerland*) use the exemption method.

A. *The recognition of profits or losses*

6. Part A of the questionnaire attempted to ascertain whether the head office of a multinational enterprise and its permanent establishments are, in a given commercial year, taxed on actual income accruing to the enterprise as a whole or whether notional profits are taxed. To simplify the analysis, only internal transfers of goods were considered since these might be sold to third parties only in subsequent commercial years.

From the replies received, three situations generally arise:

a) When the outward transfer country (a/1)[1] is that of the head office, both the tax authorities of credit and exemption countries are usually

1. These numbers refer to the cases analysed in the questionnaire: see Annex II.

in a satisfactory position. The former take no account of the internal transfer and wait until a profit actually accrues through the permanent establishment. This does not mean, however, that these tax authorities do not take into consideration the book value of the goods as disclosed in the accounts of the permanent establishment, since the profit declared by the permanent establishment will affect the tax credits they will eventually grant.

The exemption countries can defer taxing an internal transfer until a profit actually accrues, unless this is excluded by domestic legislation which does not allow for a provision corresponding to the gain to be made. It appears that *Austria* and *France* are not able to allow their resident enterprises to make such provision.

b) As to determining the taxable profit of a permanent establishment belonging to a non-resident enterprise (a/2; b/4), credit countries and exemption countries have identical views. In both cases, the accounting and tax treatment is the same as that of legally independent entities. Neither outward nor inward transfer countries make any distinction between an internal transfer and a sale to a third party (or delivery from a third party).

In case (a/2) – outward transfer country – the question is whether there is not a certain discrimination against non-resident enterprises. Admittedly this may not be so when the internal transaction concerned is actually completed in the course of the same year or, the subsequent commercial year. This would generally be the case when the transferred goods form part of the current assets of the enterprise. But doubts remain when the transfer concerns fixed assets, especially when a permanent establishment is wound up, since profits may be taxed some years before the appreciation that existed at the time of the transfer can be actually realised.

c) When the inward transfer country is that where the enterprise's head office is located or when the internal transfer is between permanent establishments forming part of that enterprise (b/3; c/5), problems can arise in credit countries. The countries in which the permanent establishments operate will levy tax on the profits accruing from an internal transfer as soon as it is made, even when these profits are not actually realised until a subsequent commercial year (a/2). Consequently, there will inevitably be a time lag between the moment when tax is paid abroad and the moment it can be taken into account in the country where the enterprise's head office is located. This means that if the country of residence does not allow tax credits to be carried forward (or offset tax in some other manner), the profit in

question may be overtaxed. From this it can be deduced that the country of residence, too, cannot ignore outward prices as taken into consideration by the permanent establishment country.

By contrast, an exemption country has no particular problem, since it can either accept the notional sum taxed by the permanent establishment country or, in accordance with the principle of economic reality, wait until a profit is actually made. In either case, the profit attributable to the permanent establishment will be exempt.

7. The question then is: what are the practical consequences of the problem that arises when an outward transfer country taxes a profit realised on an internal transfer of goods simply because the goods are leaving its fiscal jurisdiction?

In the opinion of the Committee, the notion of realisation depends mainly on each country's domestic law. It follows that outward transfer countries taxing permanent establishments of foreign countries cannot be expected to defer levying tax on transfers of goods until a profit has actually been made, since in their capacity as hosts to foreign enterprises' permanent establishments they obviously cannot follow what happens to a good once it has been transferred and is no longer in their jurisdiction. Head office countries, however, can trace a transaction from beginning to end by referring to the enterprise's general accounts. Therefore, it is logical in such a case that most countries using an exemption method allow deferral of the taxation of the profit on the internal transfer until it is actually realised; as for credit countries, they cannot do otherwise.

Inasmuch as goods transferred by the permanent establishment form part of the enterprise's current assets and are generally used for the manufacture of other products to be sold or sold as they are, the length of time between taxation on the transfer and actual realisation of the profit on it will be quite short. Thus no serious inconvenience will be experienced by the taxpaying enterprise, since it usually keeps its accounts fairly flexibly and if necessary, will be able to move the dates of the two events closer together so that the transfer of goods and the realisation of the profit accruing are disclosed in the same commercial year.

8. A more serious problem relates to the time lag between the transfer of goods and realisation of profit when a permanent establishment transfers fixed assets or – in the event that it is wound up – its entire operating equipment stock, to some other part of the enterprise of which it forms part. In such cases – which are fairly unusual – several years may pass between the transfer and the realisation of the profit accruing from it. Nonetheless, for the reasons referred to above, it would be unrealistic to expect that the outward

country would unilaterally defer levying tax until realisation occurred. For that reason, the Committee believes it is up to the head office country to seek a bilateral solution with the outward country where there is serious risk of double taxation.

Another significant problem concerning the transfer of assets arises in relation to international banking. A number of banks have made loans to customers from countries (including the countries themselves) which are experiencing economic difficulties such as to cast doubt on the value of the debt concerned. Such loans may have been made by the head office of the bank concerned or by one of its branches. Such debts may be transferred, for supervisory and financing purposes, from branch to head office or from branch to branch within a single bank. Uncertainty arises as to the taxation significance of such transfers. The first question is whether the transfer should be recognised at all for taxation purposes. In the view of the Committee such a transfer should not be recognised where it cannot reasonably be considered that it takes place for valid commercial reasons or that it would have taken place between independent enterprises, for instance where it is undertaken solely for tax purposes with the aim of maximising the tax relief available to the bank. In such cases, a transfer would not have taken place between wholly independent enterprises and therefore would not have affected the amount of profits which a separate enterprise might have been expected to make in dealing independently with the enterprise that has the permanent establishment (paragraph 2 of Article 7).

However, there may be instances in which recognition has to be extended to such a transfer. The arguments for doing so are that there does exist a commercial market for the transfer of such loans from one bank to another and the circumstances of an internal transfer may be similar to those which might have been expected to have taken place between independent banks, for example where a bank closed down a particular foreign branch and had therefore to transfer the debts concerned either back to its head office or to another branch. Another example might be the opening of a new branch in a given country and the subsequent transfer to it, solely for commercial reasons, of all loans which had been in former years granted by the head office or other branches to residents of the country where the bank has recently opened that branch.

In the opinion of the Committee, any such transfer should be treated (to the extent that it is recognised for tax purposes at all) as taking place at the open market value of the debt at the date of the transfer. The question however arises as to whether relief should be allowed for the difference between the face value of the debt and its open market value in computing the profits of the transferring part of the bank. In the opinion of the Committee, some relief has to be taken into account in computing the profits of the permanent

establishment since, between separate entities, the value of the debt at the date of transfer would have been taken into account in deciding on the price to be charged and principles of sound accounting require that the book value of the asset should be varied to take into account market values. However, the domestic laws of countries differ as to the point at which relief should be given in respect of the loss suffered in relation to a loan the market value of which has fallen below the face value. Some countries pay regard, for tax purposes, to the market value on a year by year basis, others pay more regard to the loss suffered on final disposal of the loan. It should be borne in mind that, at the time when the bank transfers a loan from one branch to another, no actual loss is occasioned to the bank as a whole and the actual loss to the bank will only be capable of precise measurement at the point when the loan is disposed of or repaid. Nevertheless, it will not always be reasonable to keep the liability of the transferring branch undetermined up to the point when the transferred loan is finally disposed of by the bank. In cases where the transferee disposes of the loan after a very short time, the country of the transferor should be entitled to limit the overall relief granted to the bank to the difference between the historic value (generally the face value) of the loan and the amount actually realised on disposal. In such cases, the total loss to the bank as a whole would be relieved in the country in which the transferring branch was situated and there would be no grounds for giving further relief in the country to which the loan was transferred where that country is a country of exemption.

In order that adequate relief for such a loss be granted, the two jurisdictions concerned should reach an agreement for a mutually consistent basis for granting relief. In such cases, account should be taken of whether the transfer value, at the date of the internal transfer, was the result of mistaken judgement as to debtor's solvency or whether the value at that date did reflect an appropriate judgement of the debtor's position at that time. In the former case, it might be appropriate for the country of the transferring branch to limit relief to the actual loss suffered by the bank as a whole and for the receiving country not to tax the subsequent apparent gain. Where, however, the loan was transferred for commercial reasons from one part of the bank to another and did, after a certain time, improve in value, then the transferring branch should normally be given relief on the basis of the actual value at the time of the transfer. The position is somewhat different where the receiving entity is the head office of a bank in a credit country because normally the credit country will tax the bank on its worldwide profits and will therefore give relief by reference to the total loss suffered in respect of the loan between the time the loan was made and the time it was finally disposed of. In such a case, the transferring branch should receive relief for the period during which the loan was in the hands of that branch by reference to the principles above. The

country of the head office will then give relief from double taxation by granting a credit for the tax borne by the branch in the host country.

B. Contractual freedom or limited recognition of arrangements concluded between permanent establishments and the rest of the enterprise of which they form part

9. Part B of the questionnaire dealt with this complex question. At the outset, it may be useful to note that while it is true that the term "contract" can rarely apply to arrangements within a single legal entity, nevertheless, tax authorities frequently require (or allow) accounting records to be presented as if an arm's length transaction had taken place.

The principle of arm's length accounting (or computation) seems to be universally accepted when the goods or services transferred are essentially the same as those supplied to third parties by the enterprise as part of its principal activity. In all other cases, a general principle of limited recognition applies to arrangements concluded by permanent establishments with other parts of the enterprise of which they form part. This leads to widely differing approaches, depending on the concept that prevails in each particular case (economic reality, equivalent treatment or purely fiscal technique):

- setting of an arm's length price, notably when the functions performed are comparable in nature and in importance to those being traded between companies forming part of the same group;
- exact attribution of the costs relating to the permanent establishment's functions;
- and apportionment of total profit based on the importance of the parties' respective functions.

It seems that limited recognition of arrangements concluded by permanent establishments within the enterprise is often prompted by fear that the application of the arm's length principle and arm's length prices will result in the creation of artificial profits. *Australia's* reply to the questionnaire, for instance, puts this very clearly:

> The recognition of internal contracts can, however, result in the creation of artificial profits or losses and income or deductions, even to the extent that the taxable income of the enterprise as a whole would differ from that that would be calculated if the enterprise was conducting its business from one point. It is considered that this would be contrary to the principles behind the establishment of taxation treaties.
>
> However, as has been mentioned earlier, the strict application of the arm's length principle to transactions between the permanent establishment and its head office could lead to the creation of deductions which have not been incurred or income which has not been

> earned by the enterprise, and in this regard we would not necessarily treat the resident and the permanent establishment in the same manner.

In the opinion of the Committee, such fears are unjustified if one is aware of the role that application of the arm's length price principle within a single legal entity is intended to play. In fact, the purpose of applying that principle should be to determine the tax share of each country in respect of the enterprise's actual profits. The fear expressed by *Australia* is, however, certainly not unfounded if one considers the cases where an enterprise allows itself to be taxed sometimes according to the direct or separate enterprise method and sometimes according to an indirect or apportionment method.

10. The present situation is unsatisfactory both for the corporate taxpayers and the tax authorities involved. Admittedly, enterprises ought to frame their internal agreements more in the light of the functions really performed by the different parties and disclose them in a consistent manner in the head office and permanent establishment accounts, rather than resort to legal artifices that tend to suppose a contractual relationship which in no way reflects economic reality. For instance, an internal agreement could allot to a permanent sales establishment the role of principal (accepting all the risks and entitled to all the profits from the activity) when in fact the permanent establishment concerned was nothing more than an intermediary or agent (incurring limited risks and receiving a limited share of the resulting income). The opposite situation, too, is conceivable.

It will still, however, be illusory to believe that real functions are being taken into consideration unless this is reflected symmetrically in the accounts of the different parts of the enterprise. It is thus essential that the outgoing valuation in the accounts of the exporting permanent establishment and the incoming valuation in the books of the importing permanent establishment should always correspond exactly – at least in terms of the national currency or the functional currency in which the enterprise records its transactions.

11. The present situation could be improved if all member countries could agree as to when the direct method and when the indirect method should be applied. Once the appropriate method is agreed upon, it should be used by all the countries where the enterprise performs its activities. Such a symmetrical arrangement would be easier to achieve if all countries could base their computations on the national or functional currency used by the enterprise.

Lastly, the Committee confirmed that even if the head office and permanent establishments kept regular and symmetrical accounts, corporate taxpayers would still have to show that those accounts were a true reflection of economic reality.

C. *Principle of a distinct and separate enterprise: arm's length price or allocation of expenses*

12. The purpose of Part C of the questionnaire was to check whether the duality of approach revealed by the Commentary on Article 7 of the Model Tax Convention is in fact reflected in tax authorities' practice.

In general this seems to be so, but there are nevertheless some important exceptions which need to be examined.

C.1 Goods, technology and trademarks, services, financial transactions

13. It would seem that the arm's length price principle is accepted for final transfers of goods when those goods still have a firm market value subsequent to the commercial year during which they are transferred, depreciation allowances being subsequently allowed on the basis of this transfer value. This applies not only to tangible assets in general (raw materials, semi-finished or finished products and industrial equipment) but also to certain intangible assets (know-how, patents and trademarks) – although, of course, final transfer of a patent or of know-how is quite exceptional.

In all other cases, notably as regards central administrative services, the right to use intangible assets, temporary assignment of industrial equipment, transfers of equity holdings and national currency or foreign currency assets (receivables and liquidities), the general rule is allocation of actual (historic) cost. For instance, temporary assignment of equipment will carry a transfer price that generally corresponds to the accounting depreciation of the goods concerned. Most countries therefore exclude royalties or lease payments and even exchange losses or gains on transfers of foreign currency assets.

What, then, are the exceptions to this general trend?

- As regards final transfer of patents, know-how or trademarks, *Australia* allows only the allocation of actual costs;
- *Finland, France, Greece, Italy, Netherlands and Switzerland* allow central administrative services to be invoiced at arm's length prices. However, when the services rendered benefit, to varying degrees, the whole of the enterprise (*i.e.* the head office and all its permanent establishments) and the direct method is administratively impracticable, *France* and *Finland* apportion the actual cost of the services without including a profit margin;
- *France, Greece, Italy and Switzerland* allow rights of use of intangible assets to produce a return at arm's length prices. As regards research and development, *Belgium* allows arm's length remuneration only for services actually rendered, but not for simple accession to rights to use intangible assets;

- *France, Germany, Italy and Switzerland* recognise that industrial equipment may be temporarily assigned at arm's length value;
- *Belgium, Finland, France, Italy, Netherlands, Portugal and Switzerland* recognise that equity holdings and assets expressed in national currency or foreign currency may be transferred at their real value.

However, regardless of the nature of the good transferred or the service rendered, all the outward transfer countries require permanent establishments of foreign enterprises to apply the arm's length price principle (see A/a/2). This is, however, subject to the limitation of this principle in regard to the provision of services which – from the standpoint of the permanent establishment's outward transfer country – are ancillary. The Committee took the view that, in such a case, it is more appropriate to require an allocation of actual costs in accordance with the views expressed in paras. 18-19 of the existing Commentary on Article 7.

14. Given the diversity of replies received, it is not possible to point to a universally accepted method of computing profits and charges applicable both to inward and outward transfer of goods. This is unfortunate, even if satisfactory methods can be arranged to eliminate any resulting double taxation or non-taxation. In the view of the Committee it would be desirable to supplement the existing Commentary on Article 7 by material which makes it easier for member countries to reach agreement on the appropriate methods to use in particular circumstances.

To some extent the problem derives from the need to reconcile paragraphs 2 and 3 of Article 7 of the Model Tax Convention. It has sometimes been suggested that this reconciliation can create practical difficulties as paragraph 2 requires that prices between the permanent establishment and the head office be normally charged on an arm's length basis, giving to the transferring entity the type of profit which it might have been expected to make were it dealing with an independent enterprise whilst the wording of paragraph 3 suggested that the deduction for expenses incurred for the purposes of permanent establishments should be the actual cost of those expenses, normally without adding any profit element.

In the view of the Committee, whilst the application of paragraph 3 may raise some practical difficulties, especially in relation to the separate enterprise and arm's length principles underlying paragraph 2, there is no difference of principle between the two paragraphs. Paragraph 3 indicates that in determining the profits of a permanent establishment, certain expenses must be allowed as deductions whilst paragraph 2 provides that the profits determined in accordance with the rule contained in paragraph 3 relating to the deduction of expenses must be those that a separate and distinct enterprise engaged in the same or similar activities under the same or similar

conditions would have made. Thus, whilst paragraph 3 provides a rule applicable for the determination of the profits of the permanent establishment, paragraph 2 requires that the profits so determined correspond to the profits that a separate and independent enterprise would have made.

In applying these principles to the practical determination of the profits of a permanent establishment, the question may arise as to whether a particular cost incurred by an enterprise can truly be considered as an expense incurred for the purposes of the permanent establishment, keeping in mind the separate entity principle of paragraph 2. In general, independent enterprises will seek to realise a profit and when transferring property or providing services to each other will charge such prices as the open market will bear. Nevertheless, there are circumstances where a particular property or service would not have been obtainable from an independent enterprise or when independent enterprises may agree to share between them the costs of some activity which is pursued in common for their mutual benefit. In these circumstances, it may be appropriate to treat any relevant costs incurred by the enterprise as an expense incurred for the permanent establishment. The difficulty arises in making a distinction between these circumstances and the cases where a cost incurred by an enterprise should not be considered as an expense of the permanent establishment and the relevant property or service should be considered, on the basis of the separate entity principle, to have been transferred between the head office and the permanent establishment at a price including an element of profit. The question must be whether such an internal transfer, whether of a temporary or final nature, is similar to one for which the enterprise, in the normal course of its business, would have charged to a third party at an arm's length price, *i.e.* by normally including in the sale price an appropriate profit. It is convenient to consider this question separately in respect of each of the headings of paragraph 13 above:

a) Goods

Where goods are supplied for resale whether in a finished state or as raw materials or semi-finished goods then it will normally be appropriate for the provisions of paragraph 2 of Article 7 to apply and for the supplying part of the enterprise to be allocated a profit, measured by reference to arm's length principles. As indicated in paragraph 13 above, there may be exceptions even here. One example might be where goods are not supplied for resale but for temporary use in the trade so that it may be appropriate for the parts of the enterprise which share the use of the material to bear only their share of the cost of such material, *i.e.* in the case of a plant, the depreciation costs suffered while the plant is in use in particular parts of the trade.

It should of course be remembered that the mere purchase of goods does not constitute a permanent establishment so that no question of attribution of profit arises in such circumstances.

b) Technology and trademarks

As between associated members of a group, there are normally two methods of dealing with intangible costs and rights. The members of the group may agree on some cost sharing mechanism whereby the historic costs of creating the intangible rights are shared between the members of the group. Alternatively, the costs may be borne by one member of the group in which case it is appropriate that other members of the group be expected to pay to the owning member an appropriate royalty etc. having regard to the value of the rights being used. Between non-associated enterprises, a royalty payment is the norm although cost sharing arrangements are used in certain areas.

Similar conditions should, in principle, apply in allocating the profits of a single entity. However, it may be extremely difficult to allocate "ownership" of the intangible right solely to one part of the enterprise and to argue that this part of the enterprise should receive royalties from the other parts as if it were an independent enterprise. Since there is only one legal entity it is not possible to allocate legal ownership to any particular part of the enterprise and in practical terms it will often be difficult to allocate the costs of creation exclusively to one part of the enterprise. It may therefore be preferable for the costs of creation of intangible rights to be regarded as attributable to all parts of the enterprise which will make use of them and as incurred on behalf of the various parts of the enterprise to which they are relevant accordingly. In such circumstances it would be appropriate to allocate the historic costs of the creation of such intangible rights between the various parts of the enterprise without any mark-up for profit or royalty. It may be objected that intangible rights may have been created and paid for before parts of the enterprise, *e.g.* an overseas branch, came into existence but equally it may be that costs of the creation of intangible rights are attributed to a permanent establishment which goes out of existence before the fruition of the rights which it has helped to create. In general therefore it seems that the best solution will usually be an allocation of actual historic costs as they incur. In doing so, tax authorities must be aware of the fact that the possible adverse consequences deriving from any research and development activity (*e.g.* the responsibility related to the products and damages to the environment) shall also be allocated to the various parts of the enterprise. An alternative which was discussed by the Committee is to consider only the divisions that actually created the intangibles as the respective owners and, therefore, also as the exclusive bearers of the said risks. These divisions would consequently be entitled to a risk compensation. But, it is of a greater importance that

whatever solution is reached is agreed between the competent authorities of the country of residence and the host country.

c) Services

The area of services is one in which it is often difficult to determine whether in a particular case a service should be charged between the various parts of a single enterprise at its actual historic cost or at that cost plus a mark-up to represent a profit to the part of the enterprise providing the service. At one extreme, it may be that it is the trade of the enterprise as a whole to provide services to third parties and that, while in the form a service is provided to another part of the enterprise, in practice it is being provided to an outside customer. In such a case it may be wrong to consider that the service has been provided to another part of the entity.

In more normal circumstances, part of the trade may consist of the provision of such services and there may be a standard charge for their provision. An example might be the financial services provided by banks which may be provided to other parts of the enterprise on exactly the same basis as they are provided to an outside customer. In such a case it will usually be appropriate to charge a service at the same price as is charged to the outside customer.

However, more commonly the provision of services is merely part of the general management activity of the company taken as a whole as where, for example, the enterprise conducts a common system of training and employees of each part of the enterprise benefit from it. In such a case, it would usually be appropriate to treat the cost of providing the service as being part of the general administrative expenses of the enterprise as a whole which should be allocated on a historic cost basis to the various parts of the enterprise to the extent that the costs are incurred for the purposes of that part of the enterprise, without any mark-up to represent profit to another part of the enterprise. This border line may be difficult to determine precisely. In the view of the Committee, it is more important that the taxation authority of the country of the provider of the services and that of the recipient reach an agreement to deal with such services on a mutually consistent basis than it is to decide on which side of the line between the arm's length basis and the historic cost basis the service should properly fall.

d) Financial assets

As to exchange gains or losses on the occasion of an internal transfer of financial assets, the Committee considered that this raises specific questions mainly concerning banks and financial institutions which should not be considered in great detail in this report because the problems are both complex and of a very specialised nature. Some problems relating to the

transfer of financial assets are considered in the report on multinational banking enterprises included in a previous publication entitled "Transfer Pricing and Multinational Enterprises – Three Taxation Studies", and nothing in this report is intended to deviate from the views expressed on these various questions in that report. One special problem which is not discussed therein relates to the transfer of debts from one part of the bank to another and is discussed in paragraph 8 above of the present report.

The other main problems dealt with in that previous report were the recognition or non-recognition of charges made in connection with the transfer of funds between various parts of a banking enterprise and the attribution of capital to the permanent establishment of a bank in situations where either actual assets were transferred to such a branch and in situations where they were not. Difficulties in practice continue to arise from the differing views of members on these questions and this report would merely emphasise the desirability of agreement on mutually consistent methods of dealing with these problems.

15. In summary, the Committee judged that the main necessity was for a fiscally neutral approach which avoided both economic double and non-taxation by reason of differences between the approach to these questions adopted by the member countries. The Committee considered whether fiscal neutrality could be achieved by advocating universal application of an arm's length price including normally but not invariably a profit element but for the reasons given above, did not consider that such a universal application, displacing the allocation of costs basis indicated by paragraph 3 of Article 7, was always appropriate. In general terms, the arm's length principle by which a charge for goods, services etc. is based on the price which would have been charged to a third party is generally applicable but there are a large number of cases where the application of such a test leads to the conclusion that as between unrelated parties acting at arm's length, the agreement which would have been reached between them would have been to allocate a particular expense on the basis of historic cost without regard to which of the two unrelated parties actually incurred the cost initially.

C.2 Attribution of a capital endowment, capital raised from external sources (borrowing) or own funds in the form of interest-bearing loans

16. Part C.2 of the questionnaire discusses the question of remuneration for internal borrowing. The rule indicated in the Commentary on the Model Tax Convention is followed by most countries, so that remuneration of internal borrowing is usually not allowed. As a result, interest payments on loans purely for the benefit of a permanent establishment can be deducted for tax purposes only from the income declared by that permanent establishment. In

all other cases interest payments are broken down between the head office and all its permanent establishments (the *United States* employs only this indirect method).

Countries seldom have any precise rules on the capital endowment of permanent establishments, so capital varies from one instance to the next and may be quite modest or even non-existent (except for *Australia*). However, in other countries (*e.g. Netherlands* and *Switzerland*), capital will, in fact, not depart from what is usual for comparable enterprises operating in the same line of business. *Finland, Italy* and *Switzerland* normally allow internal loans to yield a return. *France*, on the other hand, does so only if the internal financing concerned stems from a commercial relationship. Special problems in this area related to banks are discussed in paragraphs 8 and 14 above.

17. As regards countries which levy a tax on net wealth, it seems that deduction of liabilities is always allowed, insofar as those liabilities result from a transfer for which the tax authorities require, or tolerate, an arm's length price; this means that a corresponding value must appear among the permanent establishment's assets. These liabilities are consequently treated in the same way as accounts payable to suppliers.

18. In the context of this survey, the main point is not so much whether debtor/creditor relationships are admissible within the same legal entity as whether arm's length interest rates can be charged. This question arises essentially for two reasons:

- from the legal standpoint, the transfer of capital against payment of interest and an undertaking to repay in full at the due date is a formal act incompatible with the true legal nature of a permanent establishment;
- from the economic standpoint, internal debts and receivables may prove to be non-existent, since if an enterprise is solely or predominantly equity-funded it ought not be allowed to deduct interest charges that it has manifestly not had to pay. While, admittedly, symmetrical charges and returns will not distort the enterprise's overall profits, partial results may well be arbitrarily changed.

In business, an enterprise's head office and its permanent establishments may have recourse to borrowing. If debts were used solely to finance the borrower's activity, the problem would be reduced to one of thin capitalisation. In fact, loans contracted by an enterprise's head office usually serve its own needs only to a certain extent, the rest of the money borrowed providing basic capital for its permanent establishments.

19. The approach suggested in the Commentary on Article 7, namely the direct and indirect apportionment of actual debt charges, is open to criticism because it can often cause difficulties.

It is well known that the indirect apportionment of total interest payment charges, or of the part of interest that remains after certain direct allocations, comes up against practical difficulties, since accurate computation is possible only if the average annual status of assets and liabilities in every part of the enterprise can be ascertained. Furthermore, a computation of this nature presupposes that the whole enterprise is engaged in the same activity. What material value could a proportional allocation of interest charge payments have if no distinction were made among the different activities of a highly decentralised firm? Distortions of the taxable results will most likely follow. It is also well known that the direct apportionment of total interest expense may not accurately reflect the cost of financing the permanent establishment because the taxpayer may be able to control where loans are booked and adjustments may need to be made to reflect economic reality.

20. After long discussions, the majority of the member countries considered that it would be preferable to look for a practicable solution that would take into account a capital structure appropriate to both the organisation and the functions performed. For that reason, the ban on deductions for internal debts and receivables should continue to apply generally, subject to the special problems of banks discussed in paragraph 14 d) above. If a permanent establishment were undercapitalised, it would be up to the head office country to avoid any risk of double taxation by allowing a deduction for the part of the interest payments that the permanent establishment had not been able to deduct from its taxable income. If a permanent establishment were overcapitalised, it should be entitled to deduct a fair amount for deemed interest and such remuneration of the financing function would be for the head office a compensation for not investing the amount in long-term loans. The answer to the question as to whether a permanent establishment is under- or over-capitalised will, in principle, depend on the rules and practice of the host country, unless there is a divergent mutual agreement under Article 25 of the Model Tax Convention.

D. Taxation of actual profits; consolidation

21. The principal purpose of Part D of the questionnaire was to see whether there was any possibility, when taxing a permanent establishment, of taking due account of the worldwide profits of the enterprise of which that permanent establishment was a part. This problem obviously arises when one or the other permanent establishment realises a loss or, *a fortiori*, when the whole company realises an overall loss.

Replies make it very clear that countries hosting permanent establishments of overseas enterprises tax only profits arising by or through those permanent establishments. Consequently, it is for the country of residence of an enterprise, and for that country alone, to take into consideration the enterprise's worldwide profits or losses. On this point there is hardly any difference of opinion between credit countries and exemption countries, although:

- *Belgium*, when it is the country of residence, takes into consideration the losses suffered by certain permanent establishments overseas only if those losses exceed gains by other overseas permanent establishments belonging to the resident enterprise concerned;
- *France* applies the territoriality principle to both losses and gains overseas; however, companies resident in France may opt to be taxed under the worldwide profit or consolidated profit system.

22. The above considerations once more raise the difficulties that can occur when permanent establishments are taxed on internal transfers before the profits on those transfers have actually been realised. In some cases, serious risks of overtaxation can be avoided by adopting bilateral arrangements (see paragraphs 7 and 8 above). Nonetheless, the Committee firmly upholds the principle whereby the permanent establishment country has an absolute right to levy tax on profits realised on its territory or, more broadly speaking, on profits attributable to that permanent establishment. There is thus no question of a permanent establishment being allowed a deduction, even provisionally, in respect of any loss suffered by the rest of the enterprise of which it forms part, or of that permanent establishment's being exempted from tax if the company to whom it belongs makes an overall loss. Consequently, if an exemption country takes no account of losses suffered by overseas permanent establishments of a resident enterprise, it is not in any way violating the territoriality principle. However, since most exemption countries do take into account losses suffered by overseas permanent establishments, there is a potential risk of double deduction of such losses, unless the country of residence has the legal possibility to make the necessary retroactive adjustments (*e.g. Netherlands* during 8 years and *Switzerland* during 7 years).

E. Special cases

23. Part E of the questionnaire dealt with special cases and while it is impossible to summarise the solutions suggested under this heading, it is worth noting that all the replying countries recognised that special cases ought to be treated in the light of the arm's length price criterion.

F. *Attribution of profits and principle of non-discrimination*

24. Part F of the questionnaire dealt with this question. It is hard to tell whether the permanent establishments of overseas companies are treated, overall, as favourably as resident companies, for where one difference of treatment may be seen as discriminatory, others may, in taxpayers' eyes, be seen as favouring permanent establishments. Furthermore, some differences derive from the real nature of permanent establishments. The principal question is whether this real nature is taken into consideration in a neutral and consistent manner, or whether the patchwork of concepts that exists at present does not require a review of the Commentary on Article 24 (Non-discrimination) as regards permanent establishments.

25. The Committee intends to examine this issue in the context of future work, in particular with respect to provisions that prevent permanent establishments from claiming deductions or exemptions in respect of returns on shareholdings and tax-free allocations to different funds.

G. *Methods for the elimination of double taxation*

26. Part G of the questionnaire examined the ways in which credit and exemption countries eliminate double taxation. Descriptions by the credit countries of the methods they use to eliminate double taxation may be summarised as follows:

- *Australia*: Worldwide basis, but divided into three income classes. Excess foreign tax credits are transferable within wholly-owned company groups for set-off against Australian tax payable on other similar class of foreign income derived by another group company in the same year;
- *Canada*: Country by country; any unused foreign tax can be carried back three years and forward seven years;
- *Finland*: Country by country with no carry forward or carry-back of excess credits;
- *France*: In case of an optional derogation from the territoriality principle (*cf.* paragraph 21), overall credit with carry forward for five subsequent years;
- *Greece*: Country by country with no carry forward or carry-back of excess credits;
- *Italy*: Per country limitation with no carry forward or carry-back of excess credits;
- *New Zealand*: Country by country with no carry forward or carry-back of excess credits;
- *Portugal*: Country by country with no carry forward or carry-back of excess credits;

- *Spain*: The foreign tax credit basis is referred to the income derived from each single operation and coming from the same country with no carry forward or carry-back of excess credits;
- *Sweden*: Overall credit with carry forward for three subsequent years;
- *United Kingdom*: Item by item with no carry forward or carry-back of excess credits;
- *United States*: Worldwide basis, but separately for different types of income (baskets); excess foreign tax credits can be carried back two years and forward five years.

From these answers, it is impossible to tell with any certainty whether a credit system can always prevent double taxation. Even supposing that the tax base on which a credit is granted is materially the same in both the countries concerned, there will still be a difference due to exchange losses or gains. Obviously, if all taxes paid in the permanent establishments countries were to be credited in the head office country and the system entitled the taxpayer to a long enough carry back or forward, complete elimination of double taxation could be guaranteed. But a country-by-country credit system, especially one that comprised no carry back or carry forward entitlement, cannot offer such a guarantee.

27. As regards the exemption countries, it may be said that the tax base in the permanent establishment country and the exemption base computed by the head office country are sure to correspond as long as exchange rate fluctuations are taken into account in calculating the sum eligible for exemption. The two bases also correspond if all exchange rate gains and losses which appear in the overall result of the enterprise expressed in the national or functional currency are systematically taxed or borne by the country of residence (in the case of *the Netherlands*, for example). Furthermore, experience has shown that a per country exemption produces accurate results whereas an overall exemption sometimes leads to distortions. When the territoriality principle is strictly applied, the enterprise concerned – even in the long term – will not always escape being overtaxed. Some countries, *e.g. Belgium*, mitigate the consequences of the territoriality principle by the way losses abroad are taken into account (*cf.* paragraph 21 above).

28. Taxes finally levied by the source countries are not usually offset by credits on the tax due by permanent establishments. Even when there is no doubt at all that the income concerned is attributable to those permanent establishments, this practice apparently remains unchanged. There are, however, some notable exceptions: *Belgium, Germany* and *the United States* as a general rule, *the United Kingdom* for the permanent establishments of banks only and *France*, depending on the provisions of its treaty with the source country.

29. However, as this question has already been dealt with in the context of the report of the Committee on "Triangular Cases" (published in 1992 under the title "Model Tax Convention: Four Related Studies"), there is no need for the Committee to make additional recommendations in that respect.

III. CONCLUSIONS AND SUGGESTIONS

30. It is the Committee's opinion that the criteria governing the taxation of permanent establishments could be made clearer and more consistent if the Commentary on Article 7 of the Model Tax Convention were modified in the light of the considerations put forward in this report concerning:

a) the recognition of taxable profit and losses giving rise to deductions for tax purposes (paragraphs 7 and 8 above);

b) the account to be taken of real functions and symmetrical accounting in respect of them, as well as the application of one and the same method by all the countries concerned (paragraphs 9 to 11 above);

c) the interaction of the separate and independent enterprise principles put forward in paragraph 2 of Article 7 of the Model Tax Convention with the cost allocation method found in paragraph 3 of the same Article (paragraphs 14 and 15 above).

The Committee therefore recommends that the Commentary on Article 7 be amended along the lines of the detailed proposals contained in Annex III.

31. With respect to the above point 30(c), the Committee is of the opinion that the following question is relevant in order to reconcile the arm's length and the cost allocation principles:

> Is the internal transfer of goods or services (whether temporary or final) one of the same type which the enterprise might in the ordinary course of its activity be likely to have offered to or be requested to supply by an independent third party?

The answer to this question will be in the affirmative if the expense was initially incurred in performing a function the direct purpose of which is to make sales of a specific good or service and to realise a profit through a permanent establishment. The answer will be negative if, on the basis of the facts and circumstances of a specific case, it appears that the expense was initially incurred in performing a function the essential purpose of which is to rationalise the overall costs of the enterprise or to increase in a general way its sales.

Consequently, in applying this test, member countries should take into account the distinctions suggested in paragraphs 13 to 20 above and should bear in mind that in the absence of a clear dividing line, it is more important

that an agreement be reached in particular cases on a method of dealing with problems on a mutually consistent basis than it is to reach unilaterally decisions of principle which are to be universally adhered to despite differences of opinion with other jurisdictions. The mutual agreement procedure provided by Article 25 of the Model Tax Convention should be used where possible to arrive at satisfactory solutions in cases where countries hold differing views whether based on domestic law or on unilateral interpretations of relevant double taxation agreements.

32. As regards international consolidation of profits and losses (paragraphs 21 and 22), special cases (paragraph 23), neutral tax treatment of branches and permanent establishments (paragraphs 24 and 25) and the degree of success achieved by methods for the elimination of double taxation (paragraphs 26-29), the Committee, for the reasons already stated, makes no suggestions.

ANNEX I

XL IFA CONGRESS, NEW YORK 1986

Subject I: Transfer of assets into and out of a taxing jurisdiction

RESOLUTION (original version: French)

The XL Congress of IFA meeting in New York, as a result of its discussions, arrived at the following Findings:

1. The physical and non-physical transfer of assets, current or fixed, between tax jurisdictions, whether or not they are the result of a legal transfer of property, may give rise, sometimes even in a third country, to taxation in the absence of real profits. This is mainly the case where, as a result of the transfer, accrued appreciation is recognised although no realisation has occurred. Such taxation jeopardises tax neutrality, having an undesirable impact on business decisions, and hampers free physical and legal circulation of goods even among countries in the process of integration. The reason for this lies in the concern of the countries that taxable substance which they consider as attributable to them would be removed from their control and would ultimately escape taxation.

2. These problems are aggravated when the outgoing and incoming valuations, which are, respectively, the measure of the accrued appreciation for the departure country and which supply, for the country of entry, the basis for the ultimate taxation of capital gain and for amortisation, are not the same. During the debates, it appeared that, whereas the departure country generally applies, for its valuation, the arm's-length criterion, the country of entry uses other methods, such as historical cost reduced by amortisation. This prevents an equitable sharing of taxable substance between the two countries and may lead to double taxation.

3. The examples which have been dealt with in the discussions have shown that these distortions may be particularly disturbing in the case of short-term establishments, such as construction plants and maritime oil rigs.

4. It appeared, first from the report, then in the discussions, that these problems are of little interest to those countries which both in their internal law and in their treaties, apply worldwide taxation with a credit relief system ("credit countries"). For those countries, as a rule, there is taxation only when the transfer occurs between legal entities. Then these countries tax the entire capital gain, even that part of it which is attributable to the period during which the asset remained in the departure country. Thus, when the transfer

occurs between two credit countries, the first one makes no claim to levy tax on the gain, whereas, if the transfer occurs from a country with a territorial or exemption system ("exemption country") to a credit country, the available credit cannot always prevent the double taxation which may result from aggregating partial taxation in the departure country and total taxation in the country of entry.

In this respect, it was also noted that, by virtue of the consistent application of their own tax rules throughout, the credit countries benefit from the tax sacrifice which may have been made by the departure country for the development of its economy, unless special rules provide otherwise.

5. The discussions highlighted the particular situation where the business of a permanent establishment of a foreign company is contributed in return for shares in a subsidiary in the country of the permanent establishment. Irrespective of whether the taxation method in either country is the credit or the exemption system, the taxation of the accrued appreciation should be deferred in such a way that the right to taxation is safeguarded, until the appreciation is effectively realised.

On the basis of these findings the XL Congress of IFA in the present stage of the study of these problems,

Recommends that:

I. To the extent that the right of the departure country to tax appreciation which has accrued under its jurisdiction in recognised:

a) taxation should be deferred until realisation; this can be achieved for example by providing for a reserve equal to the accrued appreciation, such reserve to be dissolved upon disposal of the goods, or, as to amortizable goods, as amortisation progresses;

b) the outgoing and incoming valuations should, to the extent possible, be fixed by applying the same criterion, which should be the arm's-length principle.

II. These objectives may sometimes be achieved internally, by administrative and judicial interpretation on the basis of general principles of tax law, and, internationally, by mutual agreement procedures. Time lags between taxation in the two countries may, as recalled by the resolutions of the 1981 XXXVth Congress in Berlin, require waiver of the statute of limitations. In cases that cannot be so ruled upon, legislation should be amended to satisfy the above objectives, either by harmonised unilateral measures, particularly among countries in the process of integration, by means of directives or model provisions, or by supplementing, preferably on the basis of additional provisions in the model conventions, the double taxation avoidance treaties.

III. In all these respects, it is desirable that this research subject be further pursued in future IFA works. Particularly mergers and other similar cross border reorganisations would be a worthwhile subject for IFA.

ANNEX II

QUESTIONNAIRE ON THE ISSUES RAISED BY THE TAX TREATMENT OF PERMANENT ESTABLISHMENTS

A. The recognition of profits or losses

General remarks

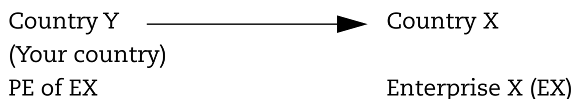
- It is assumed that the goods and services will be sold or made available to third parties in subsequent commercial years;
- It is also assumed that the transactions are made in the normal course of business of the enterprise and at arm's length (Section C. deals with the actual practices);
- Please answer each question on the assumption that you represent country Y.

What are the accounting and tax law implications for your country when it is:

a) The outward transfer country

1. In the case of the transfer of economic goods and services from the head office in country Y (a country Y enterprise) to the permanent establishment maintained by the same enterprise in country X.

2. In the case of the transfer of economic goods and services from the permanent establishment maintained by enterprise X (a country X enterprise) in country Y to the head office located in country X.



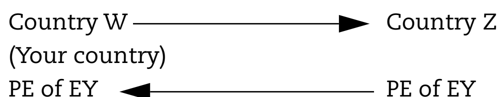
b) The inward transfer country

3. In the case of the transfer of economic goods and services from the permanent establishment maintained by enterprise Y (a country Y enterprise) in country X to the head office located in country Y.

4. In the case of the transfer of economic goods and services from the head office in country X (a country X enterprise) to the permanent establishment maintained by the same enterprise in country Y.

c) The country of residence of the head office (enterprise of country Y) which is not directly involved in the business transactions

5. In the case of the transfer of economic goods and services between the permanent establishments maintained by enterprise Y (a country Y enterprise) in countries W and Z.



B. Contractual freedom or limited recognition of arrangements concluded between permanent establishments and the rest of the enterprise of which they form part

What importance do you attach to internal arrangements between the head office and the permanent establishment? In your view, can contractual freedom be applied to business transactions between the parent company and its permanent establishments, or between permanent establishments within a single company? Or does your country apply a general principle of limited recognition (*i.e.*, taking account of the economic reality of the transaction) with regard to arrangements concluded between permanent establishments and the rest of the enterprise of which they form part?

C. Principle of a distinct and separate enterprise (Article 7, OECD Model Tax Convention); arm's length principle for intra-company transfers of economic goods and services or allocation of expenses to permanent establishments and head office or also splitting of turnover (or profit) derived from outside transactions (in the case of split business *i.e.*, where both the head office and the permanent establishment take part in a specific economic activity)

1. Assuming that the imported economic goods or services received should clearly be attributed from an economic and functional standpoint to either the permanent establishment or the parent company, what are the criteria you use to appraise the final transfer or temporary assignment of the following economic goods and services?

Goods

- Transfers of raw materials and semi-finished products;
- Transfers of finished products;
- The transfer of assignment of industrial equipment (this also raises the question of accounting depreciation);
- The transfer of assignment of other economic goods.

Transfer of Technology and Trademarks

- The transfer or assignment of patents;
- Assignment of know-how;
- Common research centre services.

Certain intra-group Services

- Central administrative services.

Loans and other financial transactions

- Transfers of equity holdings;
- Transfers of national currency or foreign currency assets.

2. The attribution of a capital endowment, capital raised from external sources (borrowing) or also own funds in the form of interest-bearing loans raises various questions:

- Domestic law requirements (deemed capital);
- The treatment of interest directly or indirectly paid to independent lenders;

- The treatment of liabilities emerging from transactions between permanent establishments and head office (deduction in computing the taxable net wealth);
- Other specific questions.

Describe the practice in your country – or if experience is insufficient – the approach you would advocate in the matter.

D. Taxation of actual profits; consolidation

1. As the country of residence of a company (head office), are you required by law or in practice to take account of the company's worldwide profits or losses?

2. As the country of residence of the permanent establishment, are you required by law or in practice to take account of the company's worldwide profits of losses?

E. Special cases (excluding those mentioned in Article 5, paragraph 4 of the OECD Model Tax Convention)

Attribution of profits in the following circumstances:

- Permanent establishments primarily performing a support function relative to the head office (repair and maintenance workshops, permanent assembly plants, coordination services in the case of a "turn-key" contract where the head contractor is a non-resident, permanent establishments performing administrative functions for the account of the head office);
- Construction sites (during the construction years and/or at the liquidation);
- Permanent establishment having the sole function of manufacturing the products which are sold by the head office and the other permanent establishments of the company; permanent establishment having the sole function of selling the products manufactured by the other permanent establishments and the head office of the company;
- Persons having authority to conclude contracts in the name of the enterprise (Article 5, paragraph 5, OECD Model Tax Convention), *e.g.*, the agent of an insurance company;
- Other special cases.

F. Attribution of profits and principle of non-discrimination

Does your country treat the permanent establishments of foreign companies invariably as favourably as resident companies (*e.g.*, with respect to the carrying forward of losses, with respect to tax rates, foreign tax credit)?

G. Methods for the elimination of double taxation

- Please describe briefly the method (credit, exemption) you use to avoid double taxation and provide one or two numerical examples.
- On what basis is the credit or exemption granted?
- The treatment of third country withholding tax on income which is effectively connected with a permanent establishment.

ANNEX III

PROPOSED MODIFICATIONS TO THE COMMENTARY ON ARTICLE 7 OF THE MODEL TAX CONVENTION[2]

It is proposed to:

1. Delete the last two sentences of paragraph 2 and replace them by the following :

> ***However, since such problems may result in unrelieved double taxation or non-taxation of certain profits, it is more important for tax authorities to agree on mutually acceptable methods for dealing with these problems, using, where appropriate, the mutual agreement procedure provided for in Article 25, than to adopt unilateral interpretations of basic principles to be adhered to despite differences of opinion with other States. In this respect, the methods for solving some of the problems most often encountered are discussed below.***

2. Replace paragraph 11 by the following new paragraph 11:

> 11. This paragraph contains the central directive on which the allocation of profits to a permanent establishment is intended to be based. The paragraph incorporates the view, which is generally contained in bilateral conventions, that the profits to be attributed to a permanent establishment are those which that permanent establishment would have made if, instead of dealing with its head office, it had been dealing with an entirely separate enterprise under conditions and at prices prevailing in the ordinary market. ***This corresponds to the 'arm's length principle' discussed in the Commentary on Article 9.*** Normally, ***the profits so determined*** would be the same profits that one would expect to be determined by the ordinary processes of good business accountancy. ***The arm's length principle*** also extends to the allocation of profits which the permanent establishment may derive from transactions with other permanent establishments of the enterprise; but Contracting States which consider that the existing paragraph does not in fact cover these more general transactions may in their bilateral negotiations, agree upon more detailed provisions ***or amend paragraph 2 to read as follows***:
>
> > ***Subject to the provisions of paragraph 3, where an enterprise of a Contracting State carries on business in the other Contracting State through a permanent establishment situated therein, there shall in each Contracting State be attributed to that permanent establishment the profits which it might be expected to make if it were a distinct and***

2. Changes to the existing Commentary appear in ***bold italics***.

independent enterprise engaged in the same or similar activities under the same or similar conditions.

3. Replace paragraph 12 by the following new paragraphs 12, 12.1 and 12.2:

12. In the great majority of cases, trading accounts of the permanent establishment – which are commonly available if only because a well-run business organisation is normally concerned to know what is the profitability of its various branches – will be used by the taxation authorities concerned to ascertain the profit properly attributable to that establishment. Exceptionally there may be no separate accounts (*cf.* paragraphs 24 to 28 below). But where there are such accounts they will naturally form the starting point for any processes of adjustment in case adjustment is required to produce the amount of properly attributable profits. It should perhaps be emphasised that the directive contained in paragraph 2 is no justification for tax administrations to construct hypothetical profit figures in vacuo; it is always necessary to start with the real facts of the situation as they appear from the business records of the permanent establishment and to adjust as may be shown to be necessary the profit figures which those facts produce.

12.1 This raises the question as to what extent such accounts should be relied upon when they are based on agreements between the head office and its permanent establishments (or between the permanent establishments themselves). Clearly, such internal agreements cannot qualify as legally binding contracts. However, to the extent that the trading accounts of the head office and the permanent establishments are both prepared symmetrically on the basis of such agreements and that those agreements reflect the functions performed by the different parts of the enterprise, these trading accounts could be accepted by tax authorities. In that respect, accounts could not be regarded as prepared symmetrically unless the values of transactions or the methods of attributing profits or expenses in the books of the permanent establishment corresponded exactly to the values or methods of attribution in the books of the head office in terms of the national currency or functional currency in which the enterprise recorded its transactions. However, where trading accounts are based on internal agreements that reflect purely artificial arrangements instead of the real economic functions of the different parts of the enterprise, these agreements should simply be ignored and the accounts corrected accordingly. This would be the case if, for example, a permanent establishment involved in sales were, under such an internal agreement, given the role of principal (accepting all the risks and entitled to all the profits from the sales) when in fact the permanent establishment concerned was nothing more than an intermediary or agent (incurring limited risks and entitled to receive only a

limited share of the resulting income) or, conversely, were given the role of intermediary or agent when in reality it was a principal.

12.2 In this respect, it should also be noted that the principle set out in paragraph 2 is subject to the provisions contained in paragraph 3, especially as regards the treatment of payments which, under the name of interest, royalties, etc. are made by a permanent establishment to its head office in return for money loaned, or patent rights conceded by the latter to the permanent establishment (*cf.* paragraphs **17.1** below and following).

4. Replace paragraph 13 by the following new paragraph 13:

13. Even where a permanent establishment is able to produce detailed accounts which purport to show the profits arising from its activities, it may still be necessary for the taxation authorities of the country concerned to rectify those accounts in accordance with ***the arm's length principle (cf. paragraph 2 above)***. Adjustment of this kind may be necessary, for example, because goods have been invoiced from the head office to the permanent establishment at prices which are not consistent with this ***principle***, and profits have thus been diverted from the permanent establishment to the head office, or vice versa.

5. Replace paragraph 15 by the following new paragraphs 15 to 15.4:

15. ***Many*** States consider that there is a realisation of a taxable profit when an asset, ***whether or not*** trading stock, forming part of the business property of a permanent establishment situated within their territory is transferred to a permanent establishment or the head office of the same enterprise situated in another State. Article 7 allows such States to tax profits deemed to arise in connection with such a transfer. Such profits may be determined as indicated ***below. In cases where such transfer takes place, whether or not it is a permanent one, the question arises as to when taxable profits are realised. In practice, where such property has a substantial market value and is likely to appear on the balance sheet of the importing permanent establishment or other part of the enterprise after the taxation year during that in which the transfer occurred, the realisation of the taxable profits will not, so far as the enterprise as a whole is concerned, necessarily take place in the taxation year of the transfer under consideration. However, the mere fact that the property leaves the purview of a tax jurisdiction may trigger the taxation of the accrued gains attributable to that property as the concept of realisation depends on each country's domestic law.***

15.1 Where the countries in which the permanent establishments operate levy tax on the profits accruing from an internal transfer as soon as it is made, even when these profits are not actually realised until a subsequent

commercial year, there will be inevitably a time lag between the moment when tax is paid abroad and the moment it can be taken into account in the country where the enterprise's head office is located. A serious problem is inherent in the time lag, especially when a permanent establishment transfers fixed assets or – in the event that it is wound up – its entire operating equipment stock, to some other part of the enterprise of which it forms part. In such cases, it is up to the head office country to seek, on a case by case basis, a bilateral solution with the outward country where there is serious risk of overtaxation.

15.2 Another significant problem concerning the transfer of assets, such as bad loans, arises in relation to international banking. Debts may be transferred, for supervisory and financing purposes, from branch to head office or from branch to branch within a single bank. Such transfers should not be recognised where it cannot be reasonably considered that they take place for valid commercial reasons or that they would have taken place between independent enterprises, for instance where they are undertaken solely for tax purposes with the aim of maximising the tax relief available to the bank. In such cases, the transfers would not have been expected to take place between wholly independent enterprises and therefore would not have affected the amount of profits which such an independent enterprise might have been expected to make in independent dealing with the enterprise of which it is a permanent establishment.

15.3 However, there may exist a commercial market for the transfer of such loans from one bank to another and the circumstances of an internal transfer may be similar to those which might have been expected to have taken place between independent banks. An instance of such a transfer might be a case where a bank closed down a particular foreign branch and had therefore to transfer the debts concerned either back to its head office or to another branch. Another example might be the opening of a new branch in a given country and the subsequent transfer to it, solely for commercial reasons, of all loans previously granted to residents of that country by the head office or other branches. Any such transfer should be treated (to the extent that it is recognised for tax purposes at all) as taking place at the open market value of the debt at the date of the transfer. Some relief has to be taken into account in computing the profits of the permanent establishment since, between separate entities, the value of the debt at the date of transfer would have been taken into account in deciding on the price to be charged and principles of sound accounting require that the book value of the asset should be varied to take into account market values (this question is further discussed in the Report of the Committee entitled "Attribution of Income to Permanent Establishment", which will be published in 1994).

15.4 Where loans which have gone bad are transferred, in order that full, but not excessive, relief for such a loss be granted, it is important that the two jurisdictions concerned reach an agreement for a mutually consistent basis for granting relief. In such cases, account should be taken of whether the transfer value, at the date of the internal transfer, was the result of mistaken judgement as to debtor's solvency or whether the value at that date did reflect an appropriate judgement of the debtor's position at that time. In the former case, it might be appropriate for the country of the transferring branch to limit relief to the actual loss suffered by the bank as a whole and for the receiving country not to tax the subsequent apparent gain. Where, however, the loan was transferred for commercial reasons from one part of the bank to another and did, after a certain time, improve in value, then the transferring branch should normally be given relief on the basis of the actual value at the time of the transfer. The position is somewhat different where the receiving entity is the head office of a bank in a credit country because normally the credit country will tax the bank on its worldwide profits and will therefore give relief by reference to the total loss suffered in respect of the loan between the time the loan was made and the time it was finally disposed of. In such a case, the transferring branch should receive relief for the period during which the loan was in the hands of that branch by reference to the principles above. The country of the head office will then give relief from double taxation by granting a credit for the tax borne by the branch in the host country.

6. Replace paragraph 17 by the following paragraphs 17 to 17.7:

17. It has sometimes been suggested that the need to reconcile paragraphs 2 and 3 created practical difficulties as paragraph 2 required that prices between the permanent establishment and the head office be normally charged on an arm's length basis, giving to the transferring entity the type of profit which it might have been expected to make were it dealing with an independent enterprise, whilst the wording of paragraph 3 suggested that the deduction for expenses incurred for the purposes of permanent establishments should be the actual cost of those expenses, normally without adding any profit element. In fact, whilst the application of paragraph 3 may raise some practical difficulties, especially in relation to the separate enterprise and arm's length principles underlying paragraph 2, there is no difference of principle between the two paragraphs. Paragraph 3 indicates that in determining the profits of a permanent establishment, certain expenses must be allowed as deductions, whilst paragraph 2 provides that the profits determined in accordance with the rule contained in paragraph 3 relating to the deduction of expenses must be those that a separate and distinct enterprise engaged in the same or similar activities under the same or similar conditions would have made. Thus,

whilst paragraph 3 provides a rule applicable for the determination of the profits of the permanent establishment, paragraph 2 requires that the profits so determined correspond to the profits that a separate and independent enterprise would have made.

17.1 In applying these principles to the practical determination of the profits of a permanent establishment, the question may arise as to whether a particular cost incurred by an enterprise can truly be considered as an expense incurred for the purposes of the permanent establishment, keeping in mind the separate and independent enterprise principles of paragraph 2. Whilst in general independent enterprises in their dealings with each other will seek to realise a profit and, when transferring property or providing services to each other, will charge such prices as the open market would bear, nevertheless, there are also circumstances where it cannot be considered that a particular property or service would have been obtainable from an independent enterprise or when independent enterprises may agree to share between them the costs of some activity which is pursued in common for their mutual benefit. In these particular circumstances, it may be appropriate to treat any relevant costs incurred by the enterprise as an expense incurred for the permanent establishment. The difficulty arises in making a distinction between these circumstances and the cases where a cost incurred by an enterprise should not be considered as an expense of the permanent establishment and the relevant property or service should be considered, on the basis of the separate and independent enterprises principle, to have been transferred between the head office and the permanent establishment at a price including an element of profit. The question must be whether the internal transfer of property and services, be it temporary or final, is of the same kind as those which the enterprise, in the normal course of its business, would have charged to a third party at an arm's length price, i.e. by normally including in the sale price an appropriate profit.

17.2 On the one hand, the answer to that question will be in the affirmative if the expense is initially incurred in performing a function the direct purpose of which is to make sales of a specific good or service and to realise a profit through a permanent establishment. On the other hand, the answer will be in the negative if, on the basis of the facts and circumstances of the specific case, it appears that the expense is initially incurred in performing a function the essential purpose of which is to rationalise the overall costs of the enterprise or to increase in a general way its sales.[3]

3. Internal transfers of financial assets, which are primarily relevant for banks and other financial institutions, raise specific issues which have already been dealt with in a separate study entitled *The Taxation of Multinational Banking Enterprises* (published in 1984 under the title *Transfer Pricing and Multinational Enterprises – Three Taxation Issues*) and which are the subject of paragraphs 19 and 20 below.

17.3 Where goods are supplied for resale whether in a finished state or as raw materials or semi-finished goods, it will normally be appropriate for the provisions of paragraph (2) to apply and for the supplying part of the enterprise to be allocated a profit, measured by reference to arm's length principles. But there may be exceptions even here. One example might be where goods are not supplied for resale but for temporary use in the trade so that it may be appropriate for the parts of the enterprise which share the use of the material to bear only their share of the cost of such material, e.g. in the case of machinery, the depreciation costs that relate to its use by each of these parts. It should of course be remembered that the mere purchase of goods does not constitute a permanent establishment (sub-paragraph 4 d) of Article 5) so that no question of attribution of profit arises in such circumstances.

17.4 In the case of intangible rights, the rules governing the relations between enterprises of the same group (e.g. payment of royalties or cost sharing arrangements) cannot be applied in respect of the relations between parts of the same enterprise. Indeed, it may be extremely difficult to allocate 'ownership' of the intangible right solely to one part of the enterprise and to argue that this part of the enterprise should receive royalties from the other parts as if it were an independent enterprise. Since there is only one legal entity it is not possible to allocate legal ownership to any particular part of the enterprise and in practical terms it will often be difficult to allocate the costs of creation exclusively to one part of the enterprise. It may therefore be preferable for the costs of creation of intangible rights to be regarded as attributable to all parts of the enterprise which will make use of them and as incurred on behalf of the various parts of the enterprise to which they are relevant accordingly. In such circumstances it would be appropriate to allocate the actual costs of the creation of such intangible rights between the various parts of the enterprise without any mark-up for profit or royalty. In so doing, tax authorities must be aware of the fact that the possible adverse consequences of any research and development activity (e.g. the responsibility related to the products and damages to the environment) shall also be allocated to the various parts of the enterprise, therefore giving rise, where appropriate, to a compensatory charge.

17.5 The area of services is the one in which difficulties may arise in determining whether in a particular case a service should be charged between the various parts of a single enterprise at its actual cost or at that cost plus a mark-up to represent a profit to the part of the enterprise providing the service. The trade of the enterprise, or part of it, may consist of the provision of such services and there may be a standard charge for their provision. In such a case it will usually be appropriate to charge a service at the same rate as is charged to the outside customer.

17.6 Where the main activity of a permanent establishment is to provide specific services to the enterprise to which it belongs and where these services provide a real advantage to the enterprise and their costs represent a significant part of the expenses of the enterprise, the host country may require that a profit margin be included in the amount of the costs. As far as possible, the host country should then try to avoid schematic solutions and rely on the value of these services in the given circumstances of each case.

17.7 However, more commonly the provision of services is merely part of the general management activity of the company taken as a whole as where, for example, the enterprise conducts a common system of training and employees of each part of the enterprise benefit from it. In such a case it would usually be appropriate to treat the cost of providing the service as being part of the general administrative expenses of the enterprise as a whole which should be allocated on an actual cost basis to the various parts of the enterprise to the extent that the costs are incurred for the purposes of that part of the enterprise, without any mark-up to represent profit to another part of the enterprise.

7. Replace paragraph 18 by the following new paragraphs 18 to 18.3:

18. Special considerations apply to payments which, under the name of interest, are made to a head office by its permanent establishment with respect to loans made by the former to the latter. In that case, the main issue is not so much whether a debtor/creditor relationship should be recognised within the same legal entity as whether an arm's length interest rate should be charged. This is because:

- ***from the legal standpoint, the transfer of capital against payment of interest and an undertaking to repay in full at the due date is a formal act incompatible with the true legal nature of a permanent establishment;***
- ***from the economic standpoint, internal debts and receivables may prove to be non-existent, since if an enterprise is solely or predominantly equity-funded it ought not to be allowed to deduct interest charges that it has manifestly not had to pay. While, admittedly, symmetrical charges and returns will not distort the enterprise's overall profits, partial results may well be arbitrarily changed.***

18.1 If debts incurred by the head office of an enterprise were used solely to finance its activity or clearly and exclusively the activity of a particular permanent establishment, the problem would be reduced to one of thin capitalisation of the actual user of such loans. In fact, loans contracted by an enterprise's head office usually serve its own needs only to a certain

extent, the rest of the money borrowed providing basic capital for its permanent establishments.

18.2 The approach previously suggested in this Commentary, namely the direct and indirect apportionment of actual debt charges, did not prove to be a practical solution, notably since it was unlikely to be applied in a uniform manner. Also, it is well known that the indirect apportionment of total interest payment charges, or of the part of interest that remains after certain direct allocations, comes up against practical difficulties. It is also well known that direct apportionment of total interest expense may not accurately reflect the cost of financing the permanent establishment because the taxpayer may be able to control where loans are booked and adjustments may need to be made to reflect economic reality.

18.3 Consequently, the majority of member countries considered that it would be preferable to look for a practicable solution that would take into account a capital structure appropriate to both the organisation and the functions performed. For that reason, the ban on deductions for internal debts and receivables should continue to apply generally, subject to the special problems of banks mentioned below (this question is further discussed in the Report of the Committee entitled 'Attribution of Income to Permanent Establishments', which will be published in 1994; cf. also the report on Thin Capitalisation published in 1987 in the series 'Issues in International Taxation' [no 2]).

8. Replace paragraphs 19 and 20 by the following new paragraphs 19 and 20:

19. It is, however, recognised that special considerations apply to payments of interest made by different parts of a financial enterprise (e.g. a bank) to each other on advances etc. (as distinct from capital allotted to them), in view of the fact that making and receiving advances is closely related to the ordinary business of such enterprises. This problem, as well as other problems relating to the transfer of financial assets, are considered in the report on multinational banking enterprises included in the OECD 1984 publication entitled 'Transfer Pricing and Multinational Enterprises – Three Taxation Studies'. This Commentary does not depart from the positions expressed in the report on this topic. One issue not discussed in the report relates to the transfer of debts by bankers from one part of the bank to another; this is discussed in paragraph 15.2 to 15.4 above.

20. The above-mentioned report also addresses the issue of the attribution of capital to the permanent establishment of a bank in situations where either actual assets were transferred to such a branch and in situations where they were not. Difficulties in practice continue to arise from the differing views of member countries on these questions and the

present Commentary can only emphasise the desirability of agreement on mutually consistent methods of dealing with these problems.

9. At the beginning of paragraph 21, replace the words "The third case" by "***Another case***".

Tax Sparing: a Reconsideration

(adopted by the OECD Council on 23 October 1997)

MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

Foreword

The changes in the international setting have lead both OECD member and non-member countries to reconsider their attitude towards including tax sparing provisions in their tax treaties. This re-consideration has in particular been provoked by the realisation that tax sparing provisions in treaties offer wide opportunities for tax planning and tax avoidance.

This report explains why member countries have become more reluctant to grant tax sparing in treaties. It also provides a set of suggestions ("best practices") on the design of tax sparing provisions to minimise abuse.

In approving the Report by the Committee on Fiscal Affairs on "Tax Sparing: A Reconsideration, on the 23rd October 1997, the OECD Council adopted a Recommendation to the Governments of member countries and instructed the Committee to pursue its work on issues pertinent to tax sparing and to develop a dialogue with non-member countries that request tax sparing, with the aim of developing a more coherent position on the granting and design of tax sparing provisions (see Annex VIII).

I. INTRODUCTION

a) *The changing global economic framework*

1. The removal of capital controls and the continuing liberalisation of the financial markets have increased the flows of cross-border investment and accelerated the pace of integration of national economies. Improved global communication technologies have enabled large corporations and financial institutions to develop global strategies. Whilst these developments have lead to a rapid expansion of cross border activities, which in turn has increased the wealth of nations, they have also increased the geographical mobility of national tax bases and the scope for tax avoidance and evasion.

2. Globalisation has also contributed to the integration of non-OECD economies into the world economy. Many Asian and Latin American countries are today major players in the world economy and account for an important part of global trade and investment. They are amongst the largest trading partners and recipients of inward investment from OECD member countries. This rapid economic growth in the Asian and Latin American regions has created a more balanced distribution of trade and investment flows between OECD member and non-member countries.

3. The move from planned to market economies by the former Soviet bloc countries has brought new actors into the international economic arena and already some of these economies, particularly Russia, are playing an increasingly important role in international trade.

4. These developments have blurred a number of traditional distinctions which underlie existing international tax arrangements. Outside of the OECD area there are an increasing number of countries which have a high per capita income and a developed and diversified industrial base. Many of these countries are rapidly developing their service and high technology sectors. A number of them (*e.g.* Argentina, Chile, Singapore, Chinese Taipei) have a higher per capita income than some of the less developed member countries.

5. Similarly, the assumption that all OECD member countries are major exporters of capital and all non-member countries are major importers of capital is increasingly being questioned. Australia, the Czech Republic, Canada, Hungary, Mexico and Poland, for example, are major importers of capital, whilst non-member countries such as Chile, Chinese Taipei, Singapore are now major sources of foreign direct investment.

6. Many OECD member countries share the tax policy concerns of non-member countries which rely on the extraction and processing of natural resources. Australia, Canada, Norway, the UK and the US are all major natural resource producers.

7. Today's world is far too complex and diversified to allow traditional and potentially misleading distinctions to influence approaches to negotiating tax treaties. A reassessment is required recognising that whilst there are many countries outside of the OECD area which remain developing countries (most African countries for example), a growing number of non-member countries are now rapidly catching up with member countries in terms of their level of economic development.

8. This increasing commonality of interest between OECD member and certain non-member countries needs, however, to be put in perspective. Whilst investment flows between OECD member and non-member countries are now becoming more balanced, most developing countries continue to rely heavily on capital imports for their development and this is unlikely to change in the immediate future.

9. Many countries provide incentives to encourage domestic and foreign investment. These can take the form of cash grants, in-kind advantages (*e.g.* free land), favourable access to government contracts and tax incentives. This note is concerned with the issues that arise when subsidies are delivered by means of the tax system.

10. Whilst recognising the right of source countries to structure their tax systems in accordance with their own objectives, the purpose of this report is to promote a collective reconsideration of tax sparing provisions and to assist in the development of a more coherent approach by both OECD member and non-member countries to tax sparing.

11. At the outset, it may be useful to provide a brief description of what is "tax sparing". To encourage foreign investment, many countries grant different kinds of tax concessions to foreign investors. When such a country concludes a convention with a country that applies the exemption method (see Article 23 A of the Model Tax Convention), no restriction of the relief given to the taxpayer arises, because the other country must give exemption regardless of the amount of tax, if any, imposed in the country of source. The exemption method usually applies to direct investments (*e.g.* investments made through subsidiaries or permanent establishments). But where the other country applies the credit method (see Article 23 B of the Model Tax Convention), the concession may be nullified to the extent that such other country will allow a deduction only of the tax actually paid in the country of source. This may be seen as frustrating the other country's tax incentive legislation.

Box I. **Example**

Company A that is a resident of country X establishes subsidiary S in country Y. S derives 100 in net income during its first year of operation. The income tax rate in country Y is 30 per cent. Because of applicable tax incentive legislation in country Y, S pays no income tax during the first five years of operation. Accordingly, the taxes spared in year 1 by S in country Y amount to 30.

In year 2, S pays 50 of its net income in dividends to A in country X. The corporate income tax rate in country X is 40 per cent. There is no tax at source on outward dividends in country Y. Country X taxes foreign dividends at the full corporate income tax rate, but allows a credit for foreign taxes paid, including corporate income tax paid by foreign subsidiaries on income out of which the dividends are paid (the "underlying tax" on the income distributed). Since no tax has been levied in country Y on the distributed income, A will pay 20 in corporate income tax on the dividends in country X (40 per cent out of 50).

12. To avoid that result, some countries have agreed to include "tax sparing" provisions in treaties with developing countries. In the case of a credit country, tax sparing provisions basically enable the investor to obtain a foreign tax credit for the taxes that have been "spared" (*i.e.* not actually paid) under the incentive regime of the source country. Similarly, to the extent an exemption country applies the credit method, *e.g.* in respect of portfolio dividends or interest (see Article 23 A of the Model Tax Convention), a tax sparing provision will enable a crediting of the tax that has been spared in the source country.

Box II. **Example**

Following the example above, the tax sparing provision in the tax treaty between country X and country Y would require country X to grant A a credit for the taxes that would have been paid by S on the distributed income in the absence of the incentive legislation in country Y. The tax due on the dividends in country X amounts to 20 (40 per cent out of 50). However, A is now granted a credit of 15 (30 per cent out of 50), constituting the tax that would have been paid in country Y had S not benefited from the incentive legislation. Because of the tax sparing provision in the treaty, A will pay only 5 in income tax in country X on the dividends.

b) *Tax sparing – a time for reconsideration?*

13. The new global environment has encouraged, and in some cases even compelled, countries to re-examine established tax structures and the policies upon which taxation arrangements are based. Tax sparing arrangements have not escaped this scrutiny. Tax sparing provisions have more than four decades of history in bilateral tax treaties, including treaties between OECD member countries, but the world of today is quite different from that when the positions of member and non-member countries towards tax sparing were developed.

14. The large majority of the OECD member countries are of the view that the provision of tax sparing in treaties is not an effective way to promote foreign investment and to promote national economic goals. These views have been reinforced by the overall disappointing experience of most member countries and many economies in transition with the use of tax incentives: a trend well documented in a recent OECD publication entitled "Taxation of Foreign Direct Investment" (1995). Furthermore, recent experience shows that tax sparing provisions offer ample opportunities for tax planning and tax avoidance which undermines the tax bases of both the residence and source country.

15. There are also many misconceptions of the views of foreign investors to tax sparing. Investment decisions taken by international investors resident in credit countries are rarely dependent on or even influenced by the existence or absence of tax sparing provisions in treaties. This is supported by the experience of the international business community which encourages countries to conclude treaties regardless of whether tax sparing can be obtained.

16. At the same time, some non-member countries are becoming concerned about the concessions that they have to make to obtain tax sparing when negotiating tax treaties. These concessions may take the form of lower withholding tax rates or stricter permanent establishment rules. These countries are questioning whether the price of obtaining tax sparing is too high given the limited benefits of such provisions.

17. This report presents a brief overview of the historical background of tax sparing provisions (Section II) and of the traditional country views on tax sparing (Section III). A review is provided of the reasons behind the changing member country attitudes to tax sparing (Section IV). It further provides an analysis of recent trends and current member country practices (Section V), and some best practices in regard to the design of tax sparing provisions (Section VI). Finally, some recommendations are made in Section VII. Annex I reproduces in alphabetical order the member country tax sparing provisions referred to in this report and Annex II and Annex III provide charts of existing tax sparing provisions in treaties between OECD member countries and

between OECD member countries and selected non-member countries. Annex IV and Annex IV contain examples of tax avoidance schemes detected in member countries. Annex VI reproduces examples of member country model tax sparing anti-abuse provisions and Annex VII reproduces the section on tax sparing in the OECD Model Tax Convention. The recommendation of the OECD Council on the granting and design of tax sparing in tax conventions is reproduced in Annex VIII.

18. For the purposes of this report, the term "resident country" refers to the country that grants tax sparing in a tax treaty. The terms "host country" and "source country" refer to the country to which tax sparing is granted.

c) The growing importance of the Model Tax Convention outside the OECD area

19. The changing global economic framework and increasing economic strength of many non-member countries in both Asia and Latin America have led to a reconsideration of non-member countries attitudes to tax treaties.

20. Many advanced non-member countries are today in the process of expanding and up-dating their tax treaty network. Some, particularly in the Latin American Region (following the lead of Mexico and taking into account the development of regional trading blocs), are re-assessing their policy of not negotiating tax treaties. Since several of these countries are both capital exporters and capital importers, they have begun to look to their policy interests as both source and residence countries rather than as one or the other. This has led to an emerging recognition among many advanced non-members that tax treaties which follow the OECD Model Convention provide a favourable tax climate to promote cross-border flows of investment and trade, although they will not always wish to follow all of the provisions of the Model.

21. Most of the 1500 or so bilateral tax treaties currently in force world-wide are based on the Model Tax Convention. The Model is widely used not only in treaty negotiations between member and non-member countries, but also in negotiations between non-member countries. The importance of the OECD Model is further evidenced by the fact that about 90 per cent of the text of the UN Model Tax Convention is based upon the OECD Model. The growing interest among non-members to become more closely associated with the work of the Committee on Fiscal Affairs in this area also supports this view.

II. THE HISTORICAL DEVELOPMENT OF TAX SPARING PROVISIONS

22. One early reference to tax sparing can be found in the 1953 report of the British Royal Commission (referred to by Prof. Surrey at the US Senate

hearings on 9 August 1957). The Commission examined the question of aiding British investment abroad through tax policy and recommended adoption of the concept of tax sparing. The Parliament debated the issue in 1953 and a second time in 1956. The Commission proposal was finally rejected by the Chancellor of the Exchequer in 1957. However, the debate on the issue continued in the following years and, in 1961, legislation was enacted enabling the UK to give relief to developing countries for taxes spared under foreign incentive programmes tailored to promote industrial, commercial, scientific, educational or other development.

23. Tax sparing appeared in a treaty context for the first time in 1957 in a treaty negotiated between the United States and Pakistan. The tax sparing provision of the US-Pakistan treaty is reproduced in Box III below:

Box III. **Pakistan-US (1957) – Article XV**

For the purposes of this credit there shall be deemed to have been paid by a United States domestic corporation the amount by which such Pakistan taxes (other than the business profits tax) have been reduced under the provisions of section 15B of the Income Tax Act, 1922 (XI of 1922) as in effect on the date of the signature of the present Convention: Provided, that any extension made by law of the period within which an industrial undertaking may be set up or commenced in order to obtain the reduction provided in section 15B shall be deemed to be in effect on the date of the signature of the present Convention. [...]

24. As regards the scope of benefits covered, the Pakistan-US treaty (1957) provided for temporary tax sparing on business (permanent establishment) income, derived by specified enterprises established during 1958 which were partially or fully exempt from tax by a certain Pakistani statute. As regards limitations, tax sparing was applied only to tax reductions or exemptions granted under the specified law that was in force at the date of the signature of the treaty. The tax sparing credit was available only for investment that earned no greater than a 5 per cent return.

25. The US Senate, however, firmly rejected the tax sparing provision in the proposed US-Pakistan treaty and refused to ratify the treaty in its original form because of the inclusion of the tax sparing provision. The United States has ever since steadfastly opposed the inclusion of tax sparing provisions in their treaties.

26. Notwithstanding the consistent US opposition to tax sparing, the inclusion of tax sparing provisions in treaties by other countries increased

world-wide throughout the 1960s and 1970s. Furthermore, the tax sparing provision of the non-ratified US-Pakistan treaty (as well as other tax sparing provisions in US treaties that were negotiated in the late 1950s but that never entered into force) came to influence the design of tax sparing provisions in other treaties, notably with respect to the scope of benefits covered and to limitations.

27. In some cases, the provisions were broader than the original proposals in the US treaties. For example, formulations that would allow continuation of tax sparing after amendment to the incentive provisions were added in a number of treaties (a) clarifying the continued application in the case of minor modification of the specified measures [*e.g.* Pakistan-UK 1961], (b) allowing the possibility to agree bilaterally to extend tax sparing to subsequent substantially similar measures [*e.g.* Pakistan-UK (1961)] or (c) allowing broad possibilities for expansion [*e.g.* Italy-Zambia (1972)].

28. The benefits of tax sparing were also expanded to include reduction of tax in a source country by agreed treaty rates applicable to the payments of dividends, interests and royalties [*e.g.* France-Israel (1963), Japan-Korea (1970)].

29. Another development was that the amount of withholding tax "deemed paid" on the payment of dividend, interest and royalties was fixed in a number of tax treaties [*e.g.* Germany-Indonesia (1977), Brazil-Japan Protocol (1976].

30. Time limitations were also introduced, generally in one of the following two types: *a)* limiting the application of tax sparing benefits to a specified number of years in respect of a particular source [*e.g.* UK-Indonesia (1974)] or *b)* limiting the effect of the tax sparing provisions ("sunset" clause) by providing for the expiration of the provision [*e.g.* Sweden-Philippines (1966)] or by applying mandatory review [*e.g.* the Australia-Singapore treaty signed in 1969 would have expired in 1974 had there been no agreement by the governments in the form of an Exchange of Notes]. The issue of introducing "sunset" clauses was raised relatively early, but their use did not seem to spread until the mid-1980s.

31. A discussion of the tax sparing issue was inserted in the Commentary on Article 23 of the 1963 Draft Double Taxation Convention. This discussion was expanded in the 1977 Model Tax Convention. The Commentary refers to various formulations by a brief description of their nature. (paragraphs 72-78 of the Commentary on Article 23 of the Model are reproduced in Annex VII).

III. TRADITIONAL COUNTRY POSITIONS ON THE ISSUE OF TAX SPARING

32. Many OECD member countries that have been critical to or opposed the inclusion of tax sparing provisions in treaties apply the credit method to avoid

double taxation. These countries generally take the view that the overall tax system of a particular country should be neutral so that the tax consequences of investment decisions ought to be the same regardless of whether the investment is made at home or abroad. Tax considerations should not influence investors' decisions to invest domestically or abroad.

33. To satisfy this objective, many such countries apply the foreign tax credit method in taxing foreign source income. Tax sparing provisions are incompatible with the policy behind the credit method in that they preserve the effectiveness of foreign tax incentives, making it more favourable, with respect to taxation, to invest abroad than at home.

34. With the exception of the United States, developed countries have nevertheless granted tax sparing to developing countries in treaties. The reasons are several.

35. Most member countries have traditionally viewed tax sparing as part of the foreign aid policy and granted it with a view to promoting industrial, commercial, scientific, or other development in developing countries. Some member countries have granted tax sparing as a matter of tax policy. This policy has partly been prompted by a fear that a consistent application of the credit method would put their resident investors at a competitive disadvantage compared to local or other foreign investors able to fully benefit from tax incentives in the host country.

36. Tax sparing is also frequently used as a bargaining chip in treaty negotiations. Some member countries are prepared to offer tax sparing in exchange for other benefits; for example, lower withholding taxes on dividends, interest, and royalties. Furthermore, some developing countries simply refuse to conclude treaties unless tax sparing is granted. Many OECD member countries have therefore accepted the necessity of granting tax sparing in order to have treaties with certain developing countries (however, see Section II, paragraph 5 for the position of the United States).

37. Tax sparing is also an issue for countries that are usually categorised as "exemption countries" to the extent that these countries still apply the foreign tax credit method to certain categories of foreign income, typically passive, portfolio income, and/or operate a general exemption system which provides for the possibility to switch-over to the credit method in particular situations (anti-avoidance rules may provide that foreign direct investment dividends or business income are exempt only if the income has been subject to a certain minimum taxation in the foreign country).

38. The exemption-oriented countries usually attach more importance to creating a tax environment where their MNEs can operate on equal terms with local investors in foreign markets than creating a tax neutral environment in relation to other resident investors. This is particularly so for smaller

countries that have small domestic markets, but relatively large numbers of companies operating globally. In these countries, foreign investment tends to supplement rather than constitute a substitute for domestic investment, as the domestic markets provide few investment opportunities for their resident MNEs.

39. These countries have often been more willing to grant tax sparing to developing countries. In part, they have been influenced by the considerations mentioned in paragraphs 4 and 5 of this section. In part, it has simply been considered consistent with their overall tax policy objectives to grant tax sparing.

IV. TAX SPARING: AN EMERGING CONSENSUS ON THE NEED FOR A RE-EVALUATION

40. A re-evaluation of the benefits of tax sparing is underway in many countries, both within and outside of the OECD area. This re-evaluation has been prompted by the trends referred to in Section I of this paper, by a greater awareness of the potential for abuse of tax sparing provisions and a greater awareness on the ineffectiveness of tax incentives to promote economic development.

a) The new global economic framework

The increasing economic strength of non-member countries

41. Over the years, the primary policy rationale for granting tax sparing has been the necessity to promote economic development in developing countries. Some countries which were developing countries in the 1960s and 1970s, are now economically much more sophisticated. Certain non-members have today reached an economic level which is equivalent or even superior to that of some member countries. These developments have made many OECD member countries more reluctant to grant tax sparing provisions in new or renegotiated treaties.

The repercussions on the resident countries of granting tax sparing

42. The tax sparing device was developed at a time when the size of global trade and investment was relatively modest, national markets were heavily regulated and where there were extensive controls on inward and outward investment. As globalisation has radically increased the amount of cross-border trade and investment and lowered or eliminated traditional barriers on such activities, the potentially adverse effects on the resident country economy of granting tax sparing have become more evident in recent years.

Because of the difficulty of limiting tax sparing to typically domestic activities, parts of the industry of the resident country may inadvertently end up competing with enterprises falling under incentive legislation in the host country (indirectly) benefiting from tax sparing (as regards economic distortions and abuse, see below).

b) Tax sparing as an instrument of foreign aid

43. As can be seen from the criteria used by countries to grant tax sparing, foreign aid considerations are taken into account.

44. Direct foreign aid is a relatively transparent means of providing assistance to developing countries. The recipient(s), the amount, and the anticipated use of the foreign aid can generally be established in relatively precise terms. Many of the control mechanisms associated with foreign aid are missing from tax sparing. The resident country is not usually involved in the identification, assessment, design, implementation, monitoring and evaluation of tax spared projects. Tax sparing viewed as aid is also subject to the traditional criticism attached to any form of tied aid; the assistance is linked to companies resident in the country providing the tax sparing. Generally speaking there are no limits on the amount of tax sparing provided. The only limit is the amount of income generated by investors in the host country. Often, it is impossible for the home country to assess accurately the tax revenue cost of its tax sparing arrangements. Furthermore, tax treaty negotiators mostly grant tax sparing without considering the nature and extent of other direct aid flowing to that developing country. The value of the tax sparing to the investors fluctuates with the rates of tax in the host and home country. Some commentators have agreed, however, that tax sparing has the advantage of being an automatic transfer of resources and one which promotes directly private sector development (for a more general discussion on the advantages and disadvantages of assistance provided directly or by means of the tax system, see Section IB of the 1984 OECD report, "Tax Expenditures. A Review of the issues and Current Practices").

c) Tax Sparing may encourage an excessive repatriation of profits

45. The purpose of tax incentives for which tax sparing is typically required is to attract foreign direct investment. Tax sparing provisions may have a counterproductive effect in this regard in that they provide an encouragement for foreign investors to repatriate an excessive percentage of their profits rather than to re-invest these profits in the source country to consolidate or to expand the original investment, and thereby further promoting that country's economic development. Indeed, in the case of foreign investment through a local subsidiary, which is by far the most common form of foreign direct investment, tax credit countries typically defer tax on subsidiary profits until

those profits are distributed. When those distributed profits bring with them a tax sparing credit, the effects of tax sparing are perverse since it encourages the return of profits to the residence country rather than the re-investment of these profits in the country of operation. Consequently, source countries, particularly those wishing to encourage re-investment, need to give careful consideration to achieving a proper balance between the need to attract new investment and the need to encourage re-investment of profits made by existing foreign investors. Tax sparing risks upsetting this balance.

Box IV

In renegotiating expired tax sparing provisions, OECD member countries are often presented with figures of the actual flows of dividends and other income out of the host country to illustrate the amounts that would be immediately taxed in the residence country in the absence of the tax sparing provision. However, these figures are often necessarily inflated, because they are premised on the existence of a clear incentive (the provision of tax sparing relief) to repatriate profits early. Regardless of the existence of any tax sparing provision, it is recognised that companies operating in countries with high rates of inflation tend to have their profits from those operations repatriated as quickly as possible.

d) The basic assumption underlying tax sparing is invalid

46. The preceding comments also point to a deficiency in the basic assumption underlying tax sparing, *i.e.* that without tax sparing, the tax foregone through the granting of a tax incentive will accrue to the treasury of the country of residence of the investor. This assumption requires that the income that has benefited from the tax incentive be taxed also in the country of residence of the investor. However, companies tend to maximise the tax benefits derived from incentives even in the absence of tax sparing. Taxation in the country of residence may either never occur or may occur only after a number of years.

47. First, as already noted, in the case of foreign investment through a local subsidiary, which is by far the most common form of foreign direct investment, tax credit countries will not tax the subsidiary's profits until those profits are distributed as dividends.[1] Yet a large part of profits of companies are never distributed as dividends, but re-invested in the country of origin or abroad.

48. Also, since dividends may be paid only many years after the underlying profits are earned, if one wanted to determine to what extent the tax imposed

in the country of residence offsets the tax foregone in the source country through the tax incentive, one would need to discount the amount of residence tax to reflect its present value at the time the income is earned.

49. Finally, one should also take account of the particular features of foreign tax credit systems. When tax sparing is not granted and the foreign profits which have not borne local tax because of a tax incentive provision are repatriated (or included in the tax base currently in the case of branch operations), it is not the case, as if often assumed, that the residence country will automatically increase its share of tax revenues from the local investment. Almost all credit-based residence countries allow a broad "averaging" of income and income tax rates for active business income. Thus the repatriation or accrual of low-taxed or untaxed foreign income will often simply allow the investor to utilise credits for "excess" taxes already paid with respect to other higher-taxed investments. As a result of the general lowering of tax rates in OECD member countries in recent years, the large majority of corporate investors appear to be in "excess" credit positions and can thus effectively utilise tax-free foreign income. As a result, in most cases, the investor and not the residence country in effect benefits from the local tax incentive.

50. The foregoing point may be illustrated by the experience of the United Kingdom. The UK allows credit for foreign tax paid on an item of income only against the UK tax otherwise payable on the same item of income. Foreign tax that cannot be credited in this way cannot be relieved in another year. Many UK groups seek to circumvent these restrictions by using so-called "mixer companies". The mixer company will be the immediate subsidiary of a UK company and it will in turn hold investments in a number of other companies. Some of these will be in high tax jurisdictions and others in low tax jurisdictions. The mixer company may, for example, receive from one subsidiary gross dividends of 100 in respect of which no foreign tax is paid and gross dividends of 100 from another subsidiary in respect of which foreign tax (underlying or indirect tax as well as withholding tax) of 66 is paid. Out of those two separate streams of income the mixer company will pay a single gross dividend of 134 to the UK. If the mixer company is resident in another EC member State, no withholding tax will be deducted from the dividend paid to the UK company. The latter will be regarded for UK tax purposes as having received a gross dividend of 200 in respect of which credit relief of 66 is available. This is exactly the amount required to cancel UK tax liability on the dividend at 33 per cent. In the Finance Act 1997, the UK Parliament enacted legislation to counter avoidance schemes that took the abusive use of mixer

companies beyond acceptable limits, for example by buying-in highly-taxed foreign income from a previously unconnected group.

Box V

The US business community, established in foreign countries that have been unwilling to conclude tax treaties with the US without tax sparing, has in recent years encouraged those countries to enter into treaty negotiations with the US, notwithstanding the consistent US opposition to granting tax sparing. Many US companies have acknowledged that they do not need tax sparing to invest in a developing country. These companies recognise that it is rather the absence of a tax treaty, not the absence of tax sparing, that deters further investment.

e) Effectiveness of tax incentives

51. As discussed below, another reason for the growing opposition to the use of tax sparing is the overall disappointing experience of OECD member countries and other countries with the use of tax incentives. Tax incentives are viewed by a growing number of countries as distortive and as an inappropriate tool for economic development (see the 1995 OECD report, "Taxation and Foreign Direct Investment. The Experience of the Economics in Transition"). During the past decade, the policy of most OECD member countries has therefore been to move away from the use of tax incentives and instead broaden the income tax base and reduce the tax rates. While developing countries are of course free to set their own policies regarding tax incentive devices, member countries are also free to question the effect that such devices can have on their own tax base through tax sparing.

52. Whilst all OECD member countries continue to use some form of tax incentives, these incentives are increasingly focused on specific areas, particularly where there are significant externalities. Thus many countries provide specific tax incentives for Research and Development and for environmental purposes. Nevertheless the general trend has been to move away from general tax incentives to promote economic development. The following paragraphs summarise the experience of OECD countries and of the former Socialist countries with the use of tax incentives. These experiences may also apply to other countries. A full description of these experiences can be found in the 1995 OECD report referred to in the previous paragraph.

Costs and gains

53. The direct cost of a tax incentive is the resulting foregone tax revenues. The expectation is that a small contribution of public funds will induce a substantial increase in private sector funds for investment. However, most empirical evidence suggests that the foregone tax revenue exceeds the increase in the desired investment (*e.g.* the Canadian experience suggests that a dollar of revenue foregone yields only 80 cents of new investment that would not have been undertaken in the absence of the incentive). The reason is that it is very difficult to target exclusively incremental investment. Therefore, a substantial amount of the incentives generates investment that would have occurred in any event.

Targeting

54. It is difficult to ensure that the companies which are intended to use the incentives are able to do so with any degree of confidence. But it is even more difficult, as most developing countries have found, to ensure that taxpayers who are intended to be excluded are effectively precluded from taking advantage of the incentives. Taxpayers naturally arrange their affairs to qualify for the incentives. For example, where tax concessions are available only to foreign investors, domestic investors may, to become eligible for the tax concessions, establish a foreign subsidiary and then route purely domestic investments through that foreign company. The negative impact of tax planning alone may neutralise the public benefits otherwise flowing from the incentives. Anti-avoidance rules are therefore often required. These rules are inevitably complicated and frequently work against the certainty that is required if there is to be any positive effect from the measure.

55. Furthermore, because foreign investors have difficulty in knowing how long tax incentives will be maintained, the incentives tend to attract companies engaged in sectors such as the retail trade and the service sector. These categories of activities are, however, highly mobile ("footloose" companies). Therefore, when the incentives expire, the activities often move to other jurisdictions offering the same type of incentives. The mobility of the activity that makes the company responsive to the incentive also acts to limit the benefit to the host country. This uncertainty sometimes also induces companies established in the host country to extract profits from the country rather than re-invest them there.

Complexity

56. Another problem with incentives is the complexity they introduce into the tax system. Incentives require definitions of the eligible activities. This in itself complicates the tax legislation. This is particularly so where the

incentives attempt to attract special classes of activities, such as high technology or R&D activities. The legislation must be sufficiently precise to allow taxpayers to predict accurately whether or not they qualify for the provision. If it is not, taxpayers cannot plan their affairs on the assumption that they will receive the incentive. In this case its receipt is simply a windfall to them, with no positive impact on their behaviour.

Tax competition

57. The use of tax incentives has also the potential of triggering competition, particularly among countries in the same region or among countries having similar industry structures. For example, a country may be tempted to use tax incentives to attract so called footloose manufacturing companies or to offer substantial tax cuts to global companies willing to establish a regional base (including Headquarters companies) in its country for manufacturing and supply. The response of the country that views itself as being in competition with the country offering incentives is to introduce some form of off-setting incentive. In the end, the tax incentives offered by the countries do nothing to alter the relative incentive to invest between the two countries. The only result of the competition is that both countries receive lower tax revenues.

Non-tax factors versus tax factors

58. When planning and making investment decisions, enterprises base their decisions on a wide range of different factors, such as political stability, size and location of markets, profitability, security of tenure, availability and cost of skilled labour and of raw materials, exchange control regulations, availability of roads, railways, harbours and other transport facilities, a trained and efficient civil service and the tax consequences of the investment. Thus, taxation is only one of many factors affecting the investment behaviour of enterprises. To the extent that companies do take tax factors into account, they generally attach greater importance to the overall structure and administration of the tax system than to the existence of tax incentives.

Lobbying

59. Another general problem with incentives is that their adoption into a tax system leads to pressure from other deserving sectors for special treatment. Whenever incentives are provided to one type of activity there will be other activities which are closely related to the preferred activity that do not qualify for the incentive. They will be able to argue that they are disadvantaged in competing with the companies receiving the incentives. A similar argument is often raised where incentives target only foreign investors. The question is then asked why the government should disadvantage domestic companies

relative to foreign-owned companies? This kind of lobbying is very difficult to withstand once some targeted incentives have been given. The general experience is that incentives over time spread to other activities and that it is politically difficult to remove them, notwithstanding the reason for their introduction may be gone long ago. While any one targeted incentive may not involve a significant revenue cost, the total for all the resulting incentives can sharply erode government revenues from the business sector.

f) Abuse of tax sparing provisions

60. A growing criticism raised against tax sparing is based on the realisation that tax sparing provisions in treaties in themselves offer wide opportunities for tax planning and tax avoidance. Not only may residents inappropriately exploit tax sparing provisions, but the residence country may also be used as a conduit by third country residents (treaty shopping). The cost of such tax avoidance schemes to the residence country may be huge – particularly where the country is being used as a conduit. The source country may also find that its revenue base is eroded in unintended ways.

61. The most common tax avoidance schemes involving tax sparing provisions may be divided into four different groups:

Transfer pricing abuse

62. Tax sparing provisions provide an inherent incentive to affiliated companies in the residence country (or third countries) to inflate the profits in the host country through transfer pricing abuse. This leads to a loss of tax in the residence country and requires valuable resources to be devoted to identifying and investigating such cases. Although the OECD Transfer Pricing Guidelines (OECD 1995) are intended to limit the scope for such abuse, the effectiveness of counteracting measures very much depend on the efficiency of the administration. Furthermore, although transfer pricing and expense allocation rules are tailored to deal with such avoidance schemes, they are unlikely to act as an effective counter in all cases.

Conduit situations

63. In a typical conduit situation, a third country investor attempts to exploit the existence of tax sparing in the treaty between the resident country and the source country. The third country investor, wishing to invest in the source country, establishes a company (or several companies) in the resident country with a view to channelling the investment to the source country through the resident company. The conduit company thereby becomes eligible for the tax sparing benefits granted in the treaty (for an example of conduit scheme, see Annex IV).

Routing

64. Routing is particularly common in situations where the resident country has agreed under a tax treaty to spare withholding tax on interest or royalties. For example, a resident bank making a loan to a foreign investor may be tempted to route the transaction through a financial institution in a developing country to benefit from tax sparing granted in respect of withholding tax on interest in the treaty between the resident country and the developing country (for an example of a routing scheme, see Annex V).

Potential government abuse of tax sparing

65. Tax sparing provisions also create an incentive for host countries to maintain artificially high rates of tax. In some cases "special" tax rates appear to have been designed primarily to secure greater tax sparing credit benefits for foreign investors of credit countries.

g) Administrative difficulties

66. Many OECD member countries have encountered administrative difficulties in applying tax sparing provisions. For example, where the tax sparing provision refers to particular sections of the law of the host country under which that country's tax is waived or reduced for the purpose of promoting economic development, it is often difficult, if not impossible, to establish whether the taxpayer has really benefited from the incentives identified in those sections. Often, the taxpayer is unable to verify it, and the competent authority of the host country is unwilling or unable to provide assistance.

V. RECENT TRENDS IN TAX SPARING PROVISIONS

67. Over the past 15 years, the number and variety of tax sparing provisions have increased considerably. In an attempt to deal with some of the problems described above, the provisions have generally become more targeted.

68. Some of the new features found in tax sparing provisions in recent years relate to the categories of taxpayers, countries or income eligible, the limits on the deemed paid tax, the period of availability, and the need to combat abuse.

a) Categories of taxpayers

69. Where the scope of taxpayers is not limited and the tax sparing includes interest and dividends, purely private loans and investment would also be covered, *e.g.* income received by individuals [*e.g.* Canada-Thailand (1984)]. A number of recent treaties therefore limit the application of tax sparing to

companies and/or to investments made by taxpayers with substantial holdings [*e.g.*, Canada-Argentina (1993)].

b) *Categories of income*

70. The categories of income covered by tax sparing provisions vary between different treaties. References are often made to the relevant provisions of the law of the source country. Typically, the scope of the tax sparing provision is limited to income derived from tax incentives designed to promote economic development in the host country. Many countries now add additional conditions, for example, to prevent investment income (*i.e.* interest and capital gain) from being included in the business income [*e.g.* Denmark-Poland Protocol (1994)].

71. Income from corporate activities do not generally require a tax sparing provision to avoid taxation in the residence country insofar as the corporate earnings are re-invested in the host country. When tax sparing is given also on corporate income, dividends paid by foreign subsidiaries out of eligible income are exempt from residence taxation to preserve the effect of the host country exemption from or reduction of tax.

72. Tax sparing on interest income has posed a number of problems, perhaps because funds are highly mobile and the amount of "deemed withholding tax paid" is calculated on the gross amount of interest, not all of which is necessarily attributable to the host country. A number of different approaches have been adopted to reduce or eliminate such problems. Apart from not extending tax sparing to interest income [*e.g.* the provisions in Japan-Bulgaria (1991) and Japan-Vietnam (1995) provide for tax sparing on dividends and royalties, but not on interest income], many countries limit tax sparing to interest income that seem unlikely to attract abuse [*e.g.* scope of lenders and borrowers limited to non-financial enterprises, *i.e.* manufacturers, *e.g.* Argentina-Canada (1993)].

c) *Limitation of the "deemed paid tax"*

73. The overall benefit of tax sparing obtainable by taxpayers resident in countries applying the credit method in their tax treaties is determined by the combination of the scope of the provision and the amount of "spared" tax. Whilst the former is generally specified in the treaty, the latter could be increased by unilateral changes of the general tax rate in the host country. A number of safeguards have been inserted in recent treaties to restrict the ability of the host country from unilaterally changing the rate of deemed paid tax.

74. Such safeguards may, for example, limit the benefits under the tax sparing provision to the tax incentives available on the date of signature of the treaty. This might, however, be difficult to administer in practice.

75. Another way is to fix in the treaty the percentage amount of deemed paid tax. For example, the treaty may specify the applicable percentage rates [*e.g.* Canada-China (1986)]. The rate may be fixed at (a) the ceiling rate provided for in the treaty [*e.g.* Germany-Indonesia (1977) and this is also the effect of the tax sparing provisions in UK treaties], (b) above the treaty rates [*e.g.* Brazil-Japan Protocol (1976] or (c) below the treaty rates [*e.g.* Japan-Bangladesh (1991)].

76. Other safeguard provisions of this kind ensure that the amount of "deemed paid tax" fixed in the treaty does not exceed the amount of tax under the general tax regime by incorporating rules that limit the amount of deemed paid tax to the level of taxation under the general taxation law of the source country [*e.g.* France-Turkey (1987) and Bangladesh-Netherlands (1993)].

d) Duration of tax sparing

77. Many treaties limit the availability of the tax sparing relief for each source [in UK treaties]. As mentioned previously, a time limitation may also be applied to the tax sparing provision itself. It has become more common in recent years to insert "sunset" clauses in the tax sparing provisions [*e.g.* Bulgaria-Japan (1991), Australia-China (1988), Denmark-Poland (1994), and Mongolia-UK (1996)].

e) Types of countries

78. Many OECD countries that agreed to insert tax sparing provisions in treaties concluded in the 1960's and 1970's with non-member countries, which have now reached a certain level of economic development, wish to remove or renegotiate the tax sparing provisions considering that the economic justification for such provisions has ceased. In certain cases, these countries have repealed the tax sparing provisions by agreeing to treaty changes. In other cases a "sunset" clause has been added. Some countries have begun to use objective criteria to define countries eligible for tax sparing. Only countries the economic level of which is below a certain benchmark is considered for tax sparing. For example, Japan uses the graduation standard of the World Bank as a reference to define eligible countries.

f) General anti-abuse provisions

79. Some recent treaties also contain a specific anti-abuse provision to reduce the potential of abuse [*e.g.* New Zealand-Singapore (1993)]. Section IV and Annex VI provide more details.

VI. BEST PRACTICES IN DESIGNING TAX SPARING PROVISIONS

80. The following paragraphs describe a number of additional features that have been used in the design of tax sparing provisions and which may help the countries that decide to use tax sparing to achieve a better targeting of the provision and reducing the potential for abuse in both the residence and source country.

a) Definition of tax incentives

81. Many countries have determined that the tax incentives covered by the tax sparing provision should be defined precisely – typically through a specification of eligible incentives – to ensure that tax sparing is granted only for agreed concessions. These countries have concluded that general references to "*special incentive laws designed to promote economic development*" provide the host country with too much discretionary authority to determine the kind and size of the tax sparing aid to be provided by the residence country. This is commonly done through a direct reference to domestic legislation. The reference is typically "static" (*i.e.* a reference is made to domestic legislation as drafted on the date of signature) to avoid the host country from subsequently extending the scope of the tax sparing provision. To avoid the risk, however, that such limitation would prevent minor amendments being made to the tax incentive provisions, some treaties permit minor modifications of the incentive legislation to be made provided that its general character is not affected. Many of those treaties also include a clause that accepts new incentives of a substantially similar character [*e.g.* Article 25(4) of Spain-India Convention (1993)]. The competent authorities of the Contracting States must sometimes agree that the new incentives are substantially of the same character [*e.g.* Article 23(5) of the Australia-Vietnam Convention (1992)].

82. Yet another possibility would be to ensure that tax sparing not be given to general and widely applicable incentive features such as broadly based tax holidays.

83. As noted in Section V(b) above, tax sparing provisions often do not apply to passive income such as interest and royalties and relatively few provisions give a "matching credit" (*i.e.* providing that a foreign tax credit will be granted at a fixed rate specified in the treaty regardless of the actual rate of withholding tax levied in the source country). This seems to reflect concerns about tax incentives directed at passive investment as well as concerns about the potential for abuse (see Section IV(f) above) involved with these forms of tax sparing.

b) Definition of activities

84. Where particular tax incentive legislation is defined in broad terms or where the incentive legislation might conceivably apply to inappropriate activities, it has sometimes been found necessary to limit the applicability of the tax sparing provision to certain specified activities, *e.g.* enumerated *active* business activities, excluding financial intermediation activities such as banking and insurance, or activities that assist in the development of the host country's capital base, such as public infrastructure, plant, equipment, skills, and knowledge [*e.g.* Article 24(2) of the Norway-Mexico Convention (1995)]. Furthermore, to avoid that export-oriented businesses in developing countries compete on "no tax" terms with businesses in other countries which have to pay tax at full rates, tax sparing relief has been given only to typically domestic-oriented activities [*e.g.* Article 23(3)(b) of the United Kingdom-Papua New Guinea Convention (1991) and Article 22(2) of the Sweden-Malta Convention (1995)].

c) Tax rates

85. Where tax sparing credits are based on the host country's *domestic tax rate*, it has in some cases been agreed to limit the maximum domestic rate that could apply for tax sparing credits in order to prevent increases of tax with limited application aimed at increasing the value of the tax spared credits [*e.g.* Article 23(4) of the Australia-Vietnam Convention (1992)].

86. Similarly, in some cases where the Contracting countries have agreed on a maximum tax rate or a deemed paid tax rate that the host country may impose on particular types of income, it has been found inappropriate to allow these rates, for the purposes of calculating tax sparing credits, to be higher than those set under domestic law. In some cases, it has been clarified in the treaty that the domestic rate applies where this rate is lower than the specified treaty rate [*e.g.* Article 23(1) of the German-Turkey Convention (1985)].

87. Tax sparing credits may also be based on maximum treaty rates. For example, where the Convention limits the withholding tax on dividends to 5 per cent, and the host country gives up its withholding tax on dividends entirely under incentive legislation recognised under the Convention, the rate of tax for which the residence country will give tax sparing credit is then limited to 5 per cent.

d) Income exempt under domestic law or treaty

88. Some OECD member countries apply the credit method to only particular types of income. For example, while the credit method may be used on income derived by resident companies through foreign permanent

establishments; dividends paid by foreign subsidiaries may be exempt under domestic law or under the treaty. Tax sparing should never be considered in regard to the latter type of income. The most a country can do is to exempt foreign income from taxation. No additional tax sparing credit should be granted in such a case.

e) Anti-abuse clause

89. Recent experience has shown that tax sparing provisions are very vulnerable to abuse (see Annex IV and Annex V). A number of treaties now include a tax sparing anti-abuse clause [*e.g.* Article 23(1) of the Spain-Argentina Convention (1992), Article 23(7) of the Australia-Vietnam Convention (1992), see also Annex VI]. Alternatively, where the resident country has an existing anti-abuse rule within its domestic tax law, the Contracting countries may expressly agree to make the tax sparing provision in the treaty subject to that domestic anti-abuse rule.

f) Time limitation

Investor level

90. Tax incentives are generally intended to encourage the start-up of new operations. It has therefore been found appropriate in some treaties to place a time limit on the availability of the tax sparing relief for each taxpayer, thereby preventing tax sparing from becoming a permanent concession [*e.g.* Article 21(3) of UK-Indonesia Convention (1993)]. Furthermore, to prevent taxpayers from abusing this rule by simply transferring the activity to a different legal entity before each time limit expires, it may be appropriate to provide that the duration should be measured having regard also to associated entities undertaking the same or similar activities. As previously noted, many tax sparing provisions today also contain traditional sunset clauses applicable to all taxpayers [see *e.g.* Article 25(5) of Mongolia-UK Convention (1996), see also Section V(d) above].

Country's economic development level

91. Tax sparing is primarily an instrument to encourage economic development in developing countries. Where the developing country has reached a certain degree of development, countries have sometimes agreed to have the tax sparing provision removed from the treaty at a certain date [see Article 22(5) of Japan-Vietnam Convention (1991)]. Many countries have found it more effective, however, to grant tax sparing only for limited periods ("sunset" clause), for example, for 5 or 10 years [*e.g.* Article 25(5) of the Spain-

India Convention (1993), see also Section V(d) above] which may facilitate the removal of the clause once its original purpose has been fulfilled.

92. However, provision of tax sparing for defined periods may raise additional practical problems. When tax sparing commences there is the possibility that contracts could be rewritten to bring the income within the tax sparing period. Furthermore, when tax sparing is expiring, contracts (particularly loan agreements) could be drafted so that income is derived before the date of expiry by, for example, by use of prepayments or cancellation fees. An interpretative provision could be included in tax treaties to ensure that the tax sparing period relates only to income accrued during the period, or the domestic law of the residence country could possibly contain rules for allocation of income to the tax sparing period.

g) Controlled foreign company legislation

93. Controlled foreign company (CFC) legislation has been enacted by fifteen OECD countries in response to regulatory reform and the growing use of tax havens and preferential tax regimes to defer or avoid taxation.[2] While foreign investment that is targeted by CFC legislation generally is excluded from the scope of applicable tax sparing provisions, CFC and tax sparing rules may in certain instances apply concurrently. The rules of the CFC legislation may then conflict with those of the tax sparing provisions. To remove any doubt, an interpretative provision could be included in the treaty providing that CFC legislation will prevail in these situations.

VII. RECOMMENDATIONS

94. This report has identified a number of concerns that put into question the usefulness of the granting of tax sparing relief by OECD member countries. These concerns relate in particular to:

- the potential for abuse offered by tax sparing;
- the effectiveness of tax sparing as an instrument of foreign aid; and
- general concerns with the way in which tax sparing may encourage countries to use tax incentives.

95. The Report has shown that tax sparing is very vulnerable to taxpayer abuse, which can be very costly in terms of lost revenue to both the residence and source country. Experience has shown that this kind of abuse is difficult to detect. In addition, even where it is detected, it is difficult for residence countries to react quickly against such abuse. The process of persuading treaty partners of the necessity to remove or modify existing tax sparing provisions to prevent such abuses may be slow and cumbersome.

96. The emerging change in attitude among countries towards tax sparing has to be seen also in the context of the increasing problem with harmful tax competition. The continued, and in recent years accelerating, integration of national economies has made many segments of the national tax bases increasingly geographically mobile. These developments have induced some countries to adopt tax regimes that have as their primary purpose the erosion of the tax bases of other countries. These types of tax incentives are specifically tailored to target highly mobile financial and other services that are particularly sensitive to tax differentials. The potentially harmful effects of such regimes may be aggravated by the existence of ill-designed tax sparing provisions in treaties. This is particularly so where a country adopts a tax regime subsequent to the conclusion of treaties and tailors this regime so as to ensure that it is covered by the scope of the existing tax sparing provision.

97. This report has also shown that tax sparing is not necessarily an adequate tool to promote economic development. Countries that have traditionally sought to obtain tax sparing benefits in treaties may have good reasons to reconsider their position on the issue. The report not only challenges the assumption generally underlying tax sparing, but it also suggests that tax sparing, by promoting the repatriation of profits, provides an inherent incentive to the foreign investor to engage in short-term investment projects and a disincentive to operate in the source country on a long-term basis.

98. The argument that tax sparing is needed to prevent that the granting of a tax incentive by a host country merely results in a transfer of tax revenues to the country of residence of the investor ignores the fact that this revenue transfer will occur only to the extent that profits are repatriated. No nullification will occur if there is no repatriation. But, even if profits are repatriated, the features of foreign tax credit systems, which all allow some form of pooling of foreign income, may be structured in such a way that tax may not necessarily be levied in the country of residence notwithstanding that no or low tax is imposed in the country of source.

99. The analysis of this report does not suggest that OECD and other countries which have traditionally granted tax sparing should necessarily cease to do so. In bilateral negotiations between member and non-member countries, some countries will, for what they see as legitimate reasons, continue to press for such provisions. But the strength of their case will need to be assessed in the course of their negotiation or renegotiation of bilateral treaties. In addition, it may now be an appropriate time to consider how OECD member countries working together with non-member countries can develop a more coherent position towards the granting of tax sparing. This may enable member countries to reassess the need to give tax sparing, particularly to countries that have reached a certain level of economic development. In judging whether there is a case for continuing to provide tax sparing,

countries will need to balance the considerations discussed in the preceding sections, particularly the scope for abuse and the role which tax sparing has played in encouraging tax competition. This would also assist countries that chose to grant tax sparing to achieve a better targeting of the provisions and to reduce the potential for abuse. Non-member countries that have traditionally requested tax sparing should reconsider whether this is an appropriate instrument to promote economic development and whether tax sparing serves their long-term economic interests.

100. The Committee on Fiscal Affairs recommends that if a member country chooses to give tax sparing credits, tax sparing should be considered only in regard to countries the economic level of which is considerably below that of OECD member countries. member countries should employ objective economic criteria to define countries eligible for tax sparing. Where countries agree to insert a tax sparing provision, they are encouraged to follow the guidance set out in Section VI of this report. The use of these "best practices" will minimise the potential for abuse of such provisions by ensuring that they apply exclusively to genuine investments aimed at developing the domestic infrastructure of the source country (see Section VI(b) above). A narrow provision applying to real investment would also discourage harmful tax competition for geographically mobile activities.

Notes

1. The current report is focused primarily on foreign investment activities carried on through a subsidiary. Since foreign branches of companies are generally taxed on a current basis in the residence country, some of the arguments raised in this and other sub-sections would not be directly relevant to branch-situations. This fact does not necessarily affect the conclusions of this report. First, the bulk of foreign operations of multinationals are carried out through subsidiaries. Second, the decision to establish foreign activities through a branch is often taken in cases where the resident company anticipates that the foreign operations initially will generate substantial losses. The use of a branch enables the resident company to offset those losses against other income derived by the company. When the branch operations later begin to generate income, the residence company often reorganises the branch into a subsidiary to benefit from deferral.
2. For a general overview of the CFC regimes in the OECD member countries, see the OECD report, Controlled Foreign Company Legislation, Studies in Taxation of Foreign Source Income (1996).

ANNEX I

MEMBER COUNTRY TAX SPARING PROVISIONS REFERRED TO IN THE REPORT

Below is reproduced in alphabetical order the member country tax sparing provisions referred to in the report.

Australia – China (1988) Article 23

4. For the purpose of paragraphs 2 and 3, Chinese tax paid shall include an amount equivalent to the amount of any Chinese tax forgone.

5. In paragraph 4, the term "Chinese tax foregone" means, subject to paragraph 6, an amount which, under the law of China relating to Chinese tax and in accordance with this Agreement, would have been payable as Chinese tax on income but for an exemption from, or reduction of, Chinese tax on that income in accordance with:

R (14)

a) Articles 5 and 6 of the Income Tax Law of the People's Republic of China concerning Joint Ventures with Chinese and Foreign Investment and Article 3 of the Detailed *Rules* and Regulations for the Implementation of the Income Tax Law of the People's Republic of China concerning Joint Ventures with Chinese and Foreign Investment;

b) Articles 4 and 5 of the Income Tax Law of the People's Republic of China concerning Foreign Enterprises;

c) Articles I, II, III, IV and X of Part I, Articles I, II, III and IV of Part II and Articles I, II and III of Part III of the interim provisions of the State Council of the People's Republic of China on reduction in or exemption from enterprise income tax and the consolidated industrial and commercial tax for special economic zones and fourteen coastal cities;

d) Articles 12 and 19 of the State Council Regulations for the Encouragement of Investment in the Development of Hainan Island;

e) Articles 8, 9 and 10 of the State Council Regulations concerning the Encouragement of Foreign Investment; and

f) Articles 1, 2 and 3 of the interim provisions of the Ministry of Finance of the People's Republic of China regarding (reduction in or exemption from) enterprise income tax and industrial and commercial consolidated tax for encouraging foreign investment in the coastal open economic areas; insofar as they were in force on, and have not been modified since, the date of signature of this Agreement, or have been modified only in minor respects so as not to affect their general

character and any other provision which may subsequently be made granting an exemption from or reduction of tax which the Treasurer of Australia and the Commissioner of the State Taxation Administration of China agree from time to time in letters exchanged for this purpose to be of a substantially similar character, if that provision has not been modified thereafter or has been modified only in minor respects so as not to affect its general character.

6. In the application of paragraph 5 in relation to dividend, interest and royalty income to which Articles 10, 11 and 12 respectively apply, the amount of Chinese tax shall be deemed to be the amount equal to:

a) in the case of dividends, 15 per cent of the gross amount of those dividends;

b) in the case of interest, 10 per cent of the gross amount of that interest; and

c) in the case of royalties, 15 per cent of the gross amount of those royalties, but only where the rate of tax levied under the law of China, other than a provision specified in paragraph 5, is not less than 15 per cent.

7. Paragraphs 4, 5 and 6 shall apply only in relation to income derived in any of the first ten years of income in relation to which this Agreement has effect by virtue of sub-paragraph (a)(ii) of Article 27 and in any later year of income that may be agreed by the Treasurer of Australia and the Commissioner of the State Taxation Administration of China in letters exchanged for this purpose.

Australia – Vietnam (1996) Exchange of Notes

The Exchange of Notes refers to Article 23 of the Convention (1992).

4. Paragraphs 5 and 6, the total amount which, under the law of Vietnam relating to Vietnamese tax and in accordance with this Agreement, would have been payable as Vietnamese tax on income but for an exemption from, or reduction of, Vietnamese tax on that income (which total amount shall be deemed to be no greater than 20 per cent of the Vietnamese taxable income that relates to the income the subject of the exemption or reduction), less the actual amount of Vietnamese tax payable on that income.

5. Paragraph 4 shall apply only in respect of exemptions or reductions resulting from the operation of:

a)

i) Articles 26, 27, 28 or 32 of the Law on Foreign Investment in Vietnam 1987; or

ii) Articles 66, 67, 68, 69 or 72 of Decree N° 18-CP on implementing regulations of the Law on Foreign Investment in Vietnam dated 16 April 1993; or

iii) Circular N° 48-TC-TCT on Profits Tax Rates and Exemption from and Reduction of Profits Tax dated 30 June 1993; or

iv) Part A of Part II of Circular N° 51-TC-TCT on Taxation of Foreign Investment in Vietnam dated 3 July 1993; or

v) Decree N° 87-CP on Build-Operate-Transfer (BOT) Contracts dated 23 November 1993 and the regulations issued with that Decree,

to the extent those provisions were in force on, and have not been modified since, the date of this Note, or have been modified only in minor respects so as not to affect their general character; or

b) any other provision which may subsequently be made granting an exemption from, or reduction of, Vietnamese tax which the Treasurer of Australia and the Minister of Finance of Vietnam determine from time to time in letters exchanged for this purpose to be provisions to which this paragraph applies. Subject to its terms, such a determination of applicable provisions shall be valid for as long as those provisions are not modified after the date of that determination or have been modified only in minor respects so as not to affect their general character.

6. Paragraph 4 shall apply only to the extent that the exemption or reduction is granted in respect of Vietnamese tax on income from the following activities:

a) construction of infrastructure facilities including communications, power production and supply, construction of infrastructure facilities for the export processing and industry intensive zones and information and telecommunication facilities in mountainous areas in which natural and socio economically difficult conditions exist; or

b) plantation of new forests for commercial exploitation; or

c) extremely important activities listed in the investment portfolio announced by the Vietnamese State Committee for Co-operation and Investment for each period; or

d) exploitation of natural resources except oil, gas or rare and precious natural resources; or

e) heavy industry projects including metallurgy, mechanical engineering production, base chemical production, cement production, electrical and electronic materials manufacturing, fertiliser manufacturing and anti epidemic medicines for use in animal production or forestry; or

f) plantation of long term industrial crops; or

g) activities in mountainous areas in which naturally and socio economically difficult conditions exist including hotel undertaking projects; or

h) any project satisfying at least 2 of the following criteria:

i) employing at least 500 Vietnamese; or

ii) applying advanced technology which satisfies the requirements listed in Article 4 of the Ordinance on the Transfer of Foreign Technology dated 5 December 1988, subject to the approval of the Ministry of Science and Technology and Environment; or

iii) exporting at least 8 per cent of the products manufactured by the project itself; or

iv) the prescribed capital or contributed capital for the implementation of the business co-operation contract is at least US $ 10 million dollars; or

i) projects carrying out infrastructure activities within a definite time period in which the foreign partner transfers the infrastructure to the Vietnamese Government without any compensation.

7. Notwithstanding the operation of paragraph 4, Vietnamese tax forgone shall not be deemed to have been paid in respect of income derived from:

a) banking, insurance, consulting, accounting, auditing and commercial services of any kind; or

b) the operation of ships or aircraft, other than ships or aircraft operated principally from places in Vietnam and used solely in carrying on a business in Vietnam; or

c) any scheme entered into by an Australian resident with the purpose of using Vietnam as a conduit for income or as a location of property in order to evade or avoid Australian tax through the exploitation of the Australian foreign tax credit provisions or to confer a benefit on a person who is neither a resident of Australia, nor of Vietnam.

8. Paragraphs 4, 5, 6 and 7 shall not apply in relation to income derived in any year of income after the year of income that ends on:

a) 30 June 2003; or

b) any later date that may be agreed by the Treasurer of Australia and the Minister of Finance of Vietnam in letters exchanged for this purpose.

"whichever is the later in time occurring".

Canada – Argentina (1993) Article 23

2. For the purpose of sub-paragraph (a) of paragraph 1, tax payable in Argentina by a company engaged primarily in the manufacturing or natural resources sector which is a resident of Canada in respect of:

a) interest, other than interest which is exempted in Argentina in accordance with paragraph 3 of Article 11, or

b) industrial royalties referred to in paragraph 3 of Article 12 paid by a company engaged primarily in the same sector which is a resident of Argentina shall be deemed to have been paid at the rate of 12.5 per cent in the case of interest and at the rate of 15 per cent in the case of royalties. The provisions of this paragraph shall apply for the first five years for which the Convention is effective, but the competent authorities of the Contracting States may consult with each other to determine whether this period shall be extended.

Canada – China (1986) Article 21

2. For the purposes of paragraph 1(a), tax payable in the People's Republic of China by a company which is a resident of Canada shall be deemed to include any amount which would have been payable as Chinese tax for any year but for an exemption from, or reduction of, tax granted for that year or any part thereof under any of the following provisions of Chinese law:

a) Articles 5 and 6 of the Income Tax Law of the People's Republic of China concerning Joint Venture with Chinese and Foreign Investment and Article 3 of the Detailed Rules and Regulations for the Implementation of the Income Tax Law of the People's Republic of China concerning Joint Ventures with Chinese and Foreign Investment;

b) Articles 4 and 5 of the Income Tax Law of the People's Republic of China concerning Foreign Enterprises;

c) Articles I, II, III, IV and X of Part 1, Articles I, II, III and IV of Part II and Articles I, II and III of Part III of the interim provisions of the State Council of the People's Republic of China concerning reduction or exemption from enterprise income tax in special economic zones and coastal cities; so far as they were in force on, and have not been modified since, the date of signature of this Agreement, or have been modified only in minor respects so as not to affect their general character; or

d) any other provision which may subsequently be made granting an exemption or reduction of tax which is agreed by the competent authorities of the Contracting States to be of a substantially similar

character, if it has not been modified thereafter or has been modified only in minor respects so as not to affect its general character;

Canada – Thailand (1984) Article 22

3. For the purposes of paragraph 1(a), the term "tax payable in Thailand" shall be deemed to include any amount which would have been payable as Thai tax for any year but for an exemption or reduction of tax granted with a view to promoting industrial, commercial, scientific, educational or other development in Thailand, for that year or any part thereof under:

a) the provisions of the Special Incentive Laws designed to promote economic development in Thailand so far as they were in force on, and have not been modified since, the date of signature of this Convention, or have been modified only in minor respects so as not to affect their general character; or

b) any other provision which may subsequently be made granting an exemption or reduction of tax which is agreed by the competent authorities of the Contracting States to be of a substantially similar character, if it has not been modified thereafter or has been modified only in minor respects so as not affect its general character. Provided that relief from Canadian tax shall not be given by virtue of this paragraph in respect of income from any source if the income arises in a period starting more than ten years after the exemption from or reduction of Thai tax was first granted in respects of that source. Provided further that any deduction from Canadian tax granted in accordance with the provision of this paragraph in respect of dividends or interest paid to an individual shall not exceed 15 per cent of the gross amount thereof; and in respect of dividends paid to a company, other than a company referred to in paragraph 3 of Article 10, or in respect of interest paid to a company shall not exceed 20 per cent of the gross amount thereof.

Denmark – Poland (1994) Protocol

Article III

After Article 23, paragraph 2, subparagraph (c), the following subparagraphs shall be inserted:

d) "where in accordance with the laws of a Contracting State a reduction of tax on the profits of an enterprise is granted for the purpose of encouraging economic development in that State, the references in paragraph 1 and paragraph 2, subparagraphs (a) and (b) of this Article, to 'taxes paid' or 'income tax paid' shall be deemed to include any amount which would have been payable as tax in accordance with

this Agreement for any year but for a reduction of tax granted for that year, provided that such an enterprise (being a permanent establishment) is engaged in the manufacture or sale of goods or merchandise or services (other than services in the financial sector) and that no more than 25 per cent of the enterprise's income arises from interest and gains from the alienation of shares and bonds;

e) where dividends are paid by a company which is a resident of Poland to a person (being a company) which is a resident of Denmark, and which owns directly or indirectly not less than 25 per cent of the share capital of the first-mentioned company then such dividends shall be exempt from Danish tax, provided that the company paying the dividends is engaged in the manufacture or sale of goods or merchandise or services (other than services in the financial sector) and that no more than 25 per cent of the company's income arises from interest and alienation of shares and bonds;

f) the provisions in subparagraphs (d) and (e) shall apply for the first five years for which the Protocol amending the original Agreement between Poland and Denmark is effective. The competent authorities shall consult each other in order to determine whether this period shall be extended. Any such extension shall take effect from such date and subject to such modifications and conditions, including conditions as to termination, as may be specified and agreed between the Contracting States in notes to be exchanged through diplomatic channels or in any other manner in accordance with their constitutional procedures."

Germany – Indonesia (1977) Article 22(1)

c) If in the cases (aa), (bb) and (cc) of subparagraph (b) above, Indonesian tax on dividends on interest, or on royalties is wholly relieved or reduced below the rates of tax provided for in Article 9 paragraph 2, Article 10 paragraph 2, or Article 11 paragraph 2, by special incentive measures under Indonesian Law designed to promote economic development in Indonesia, there shall be allowed as a credit against German income tax and corporation tax, including the surcharge thereon, on such dividends, interest or royalties, an amount corresponding to the rate of tax provided for in the foregoing mentioned provisions of this Agreement. The credit allowed under the foregoing sentence, shall, however, not exceed the amount of Indonesian tax which would have been payable but for such reduction.

Germany – Turkey (1985) Article 23(1)

(d) Where dividends, interest and royalties mentioned in subparagraph (b) are taxed under special measures introduced in Turkish law for the purpose of promoting the economic development of the Republic of Turkey, at rates of tax which are reduced below 10 per cent, there shall under the conditions provided in subparagraph (b) be allowed as a deduction from the tax paid in the Federal Republic of Germany on such income an amount equal to at least 10 per cent of the gross amount of such income. However, the deduction shall not exceed the tax paid in the Republic of Turkey in the absence of such measures.

Japan – Bangladesh (1991) Article 23

3. For the purposes of the credit referred to in subparagraph (a) of paragraph 1 above, where an amount of tax paid in Bangladesh on dividends or royalties to which the provisions of paragraph 2 of Article 10 or paragraph 2 of Article 12, as the case may be, apply, is less than 10 per cent of the gross amount thereof, Bangladesh tax shall be deemed to have been paid at the rate of 10 per cent of the gross amount of such dividends or royalties.

4. For the purposes of the credit referred to in subparagraph (a) of paragraph 1 above, where an amount of tax paid in Bangladesh on interest to which the provisions of paragraph 2 of Article 11 apply is less than 5 per cent of the gross amount thereof, Bangladesh tax shall be deemed to have been paid at the rate of 5 per cent of the gross amount of such interest, if such interest is subject to:

a) the provisions of paragraphs (a), (b), (c), (d), (e), (f) and (g) of Notification number S.R.O. 417A-L/76 dated 29 November 1976; or

b) any provision referred to in (a) above as modified after the date of signature of this Convention or any other special incentive measure designed to promote economic development in Bangladesh which may be introduced in future in the Bangladesh tax laws in modification of, or in addition to, the existing measures referred to in (a) above, provided that an agreement is made between the two Governments in respect of the scope of the benefit accorded to the taxpayer by the said provision so modified or the said measure. The provisions of this paragraph shall not apply to interest to which the provisions of paragraph 3 of Article 11 apply.

5. For the purposes of the credit referred to in paragraph 1 above, the term "Bangladesh tax payable" shall be deemed to include the amount of the

Bangladesh tax which would have been paid under the laws of Bangladesh if the Bangladesh tax had not been reduced or exempted in accordance with:

a) the provisions of Notification number S.R.O. 289-L/89 dated 17 August 1989 (relating to exemption from tax for industry set-up in any Export Processing Zone); or

b) any provision referred to in (a) above as modified after the date of signature of this Convention or any other special incentive measure designed to promote economic development in Bangladesh which may be introduced in future in the Bangladesh tax laws in modification of, or in addition to, the existing measures referred to in (a) above, provided that an agreement is made between the two Governments in respect of the scope of the benefit accorded to the taxpayer by the said provision so modified or the said measure.

Japan – Brazil (1976) Protocol

Sub-paragraphs (a), (b) and (e) of paragraph (2) of article 22 shall be deleted and replaced by the following:

a)

i) Where a resident of Japan derives income from Brazil which may be taxed in Brazil in accordance with the provisions of this Convention, the amount of the Brazilian tax payable in respect of that income shall be allowed as a credit against the Japanese tax imposed on that resident. The amount of credit, however, shall not exceed that part of the Japanese tax which is appropriate to that income.

ii) Where the income derived from Brazil is a dividend paid by a company which is a resident of Brazil to a company which is a resident of Japan and which owns at least 10 per cent either of the voting shares of the company paying such dividend, or of the total shares issued by that company, the credit referred to in (i) above shall take into account the Brazilian tax payable by the company paying the dividend in respect of its income.

b)

i) For the purposes of the credit referred to in sub-paragraph (a) (i) above, Brazilian tax shall always be considered as having been paid:

A) At the rate of 25 per cent in the case of dividends to which the provisions of paragraphs (2) and (5) of article 9 apply, and of royalties to which the provisions of sub-paragraphs (b) and (c) of paragraph (2) of article 11 apply;

B) At the rate of 20 per cent in the case of interest to which the provisions of paragraph (2) of article 10 apply.

ii) For the purposes of the credit referred to in sub-paragraph (a) above, Brazilian tax shall be deemed to include the amount of Brazilian tax which would have been paid if the Brazilian tax had not been exempted or reduced in accordance with the special incentive measures designed to promote economic development in Brazil, which are effective on March 23, 1976, or which may be introduced thereafter in the Brazilian tax laws in modification of, or in addition to, the existing measures, provided that the scope of the benefit accorded to the taxpayer by those measures shall be agreed to by the Governments of both Contracting States.

c) In the application of the provisions of sub-paragraph (b)(ii) above, there shall not, in any event, be deemed to have been paid an amount of tax higher than that which, but for the exemption or reduction of tax due to the special incentive measures, would result from the application of the Brazilian tax laws effective on 23 March 1976."

Japan – Bulgaria (1991) Article 23

3. For the purposes of the credit referred to in subparagraph (a) of paragraph 2 above, where an amount of tax paid in Bulgaria on dividends or royalties to which the provisions of paragraph 2 of Article 10 or paragraph 2 of Article 12, as the case may be, apply is less than 10 per cent of the gross amount thereof. Bulgarian tax shall be deemed to have been paid at the rate of 10 per cent of the gross amount of such dividends or royalties.

4. For the purposes of the credit referred to in paragraph 2 above, the term "Bulgarian tax payable" shall be deemed to include the amount of the Bulgarian tax which would have been paid under the laws of Bulgaria if the Bulgarian tax had not been reduced or exempted in accordance with the special incentive measures designed to promote economic development in Bulgaria, provided that an agreement is made between the two Governments in respect of the scope of the benefit accorded to the taxpayer by the said measures.

5. The provisions of paragraphs 3 and 4 shall not apply in respect of income derived by a resident of Japan in any taxable year beginning on or after the first day of January of 2002.

Japan – Vietnam (1995) Article 22

3. For the purposes of the credit referred to in paragraph 2, taking into account the stage of economic development of Vietnam, there shall be deemed to have been paid by the taxpayer the amount which would have been

paid as Vietnamese tax under the laws of Vietnam and in accordance with this Agreement if the Vietnamese tax had not been reduced or relieved in accordance with the special incentive measures designed to promote economic development in Vietnam, effective on the date of signature of this Agreement or which may be introduced in the future in the Vietnamese tax laws in modification of or in addition to the existing measures, provided that an agreement is made between the two Governments in respect of the scope of the benefit accorded to the taxpayer by the said measures.

4. For the purposes of the credit referred to in sub-paragraph (a) of paragraph 2, the Vietnamese tax shall always be considered as having been paid at the rate of 10 per cent of the gross amount in the case of dividends to which the provisions of paragraph 2 of Article 10 apply and of royalties or proceeds to which the provisions of paragraph 2 or 5 of Article 12 apply.

5. The provisions of paragraphs 3 and 4 of this Article shall not apply in respect of income derived by a resident of Japan in any taxable year beginning after 31 December of the fifteenth calendar year next following the calendar year in which this Agreement enters into force.

The Netherlands – Bangladesh (1993) Article 23

4. Where, by reason of special relief given under the provisions of Bangladesh law for the purpose of encouraging investment in Bangladesh the Bangladesh tax actually levied on interest and royalties arising in Bangladesh is lower than the tax Bangladesh may levy according to paragraph 2 of Article 11 and paragraph 2 of Article 12, then the amount of the tax paid in Bangladesh on such interest and royalties shall be deemed to have been paid at the rates of tax mentioned in the said provisions. However, if the general tax rates under Bangladesh law applicable to the afore-mentioned interest and royalties are reduced below those mentioned in the foregoing sentence these lower rates shall apply for the purposes of that sentence.

The provisions of the two foregoing sentences shall only apply for a period of 10 years after the date on which the Convention became effective. This period may be extended by mutual agreement between the competent authorities.

New Zealand – Singapore (1993) Protocol

Article I

Notwithstanding paragraph 3 of Article 19 of the Agreement, a New Zealand resident deriving income from Singapore, being income referred to in that paragraph, shall not be deemed to have paid Singapore tax in respect of such income where the competent authority of New Zealand considers, after

consultation with the competent authority of Singapore, that it is inappropriate to do so having regard to:

a) whether any arrangements have been entered into by any person for the purpose of taking advantage of paragraph 3 of Article 19 for the benefit of that person or any other person;

b) whether any benefit accrues or may accrue to a person who is neither a New Zealand resident nor a Singapore resident;

c) the prevention of fraud or the avoidance of the taxes to which the Agreement applies;

d) any other matter which the competent authorities consider relevant in the particular circumstances of the case including any submissions from the New Zealand resident concerned.

Article II

Article I of this Second Protocol shall apply to income derived on or after 1 July 1993.

Spain – India (1993) Article 25

4. For the purposes of deduction referred to in paragraph 3, the term "income-tax paid in India" shall be deemed to include any amount which would have been payable as Indian tax under the laws of India and in accordance with this Convention for any year but for an exemption from, or reduction of, tax granted for that year under:

i) Sections 10(4), 10(15)(iv), 10A, 10B, 32A, 32AB, 80HH, 80HHC and 80I of the Income-tax Act, 1961 (43 of 1961) so far as they were in force on, and have not been modified since, the date of the signature of this Convention, or have been modified only in minor respects so as not to affect their general character; or

ii) any other provision which may be enacted hereafter granting a deduction in computing the taxable income or an exemption or reduction from tax which the competent authorities of the Contracting States agree to be of a substantially similar character if it has not been modified only in minor respects so as not to affect its general character.

5. The provision of paragraph 4 shall apply for the first 10 years for which this Convention is effective but the competent authorities of the Contracting States may consult each other to determine whether this period shall be extended.

Sweden – Malta (1995) Article 22(2)

d) For the purposes of sub-paragraph (a) of this paragraph the term "Malta tax paid" shall be deemed to include the Malta tax which would have been paid but for any time-limited exemption or reduction of tax granted under incentive provisions contained in the Malta law designed to promote economic development to the extent that such exemption or reduction is granted for profits from industrial or manufacturing activities or from agriculture, fishing or tourism (including restaurants and hotels) provided that the activities have been carried out within Malta. For the purposes of sub-paragraph (c) of this paragraph a tax of 15 per cent calculated on a Swedish tax base shall be considered to have been paid for such activities under those conditions mentioned in the previous sentence. The competent authorities may agree to extend the application of this provision also to other activities.

e) The provisions of sub-paragraph (d) of this paragraph shall apply for the first ten years during which this Convention is effective. This period may be extended by a mutual agreement between the competent authorities.

United Kingdom – Indonesia (1993) Article 21

3. For the purposes of paragraph (1) of this Article, the term "Indonesian tax payable" shall be deemed to include any amount which would have been payable as Indonesian tax for any year but for an exemption or reduction of tax granted for the year or any part thereof under Article 15(5) and Article 16(1) and (2) of Law No 1 of 1967 of Indonesia to the extent that these provisions continue in force by virtue of Article 33(2)(a) of Act No 7 of 1983 of Indonesia. Provided that relief from United Kingdom tax shall not be given by virtue of this paragraph in respect of income from any source if the income arises in a period starting more than 10 years after the exemption from, or reduction of, Indonesian tax was first granted in respect of that source.

United Kingdom – Mongolia (1996) Article 24

4. For the purposes of paragraph 1 of this Article, the term "Mongolian tax payable" shall be deemed to include any amount which would have been payable as Mongolian tax for any year but for a reduction of tax granted for that year or any part thereof as a result of the application of the following provisions of Mongolian law:

a) sub-paragraph (i) of paragraph 1 of Article 20 of the Foreign Investment Law of Mongolia so far as it was in force on, and has not been modified since, the date of signature of this Convention, or has

been modified only in minor respects so as not to affect its general character; or

b) any other provision which may subsequently be made granting a reduction of tax which is agreed by the competent authorities of the Contracting States to be of a substantially similar character, if it has not been modified thereafter or has been modified only in minor respects so as not to affect its general character.

5. Relief from United Kingdom tax by virtue of paragraph 4 of this Article shall not be given where the profits, income or chargeable gains in respect of which tax would have been payable but for the exemption or reduction of tax granted under the provisions referred to in that paragraph arise or accrue more than ten years after the date on which this Convention enters into force.

6. The period referred to in paragraph 5 of this Article may be extended by agreement between the Contracting States.

United Kingdom – Papua New Guinea (1991) Article 23

3. For the purposes of paragraph 1 of this Article, the term "Papua New Guinea tax payable" shall be deemed to include any amount which would have been payable as Papua New Guinea tax for any year but for an exemption or reduction of tax granted for that year on any part thereof under any of the following provisions of Papua New Guinea law:

a) Sections 45L, 73(9), 97 or 97A of the Papua New Guinea Income Tax Act 1959 as amended, so far as they were in force on, and have not been modified since, the date of signature of this Convention, or have been modified only in minor respects so as not to affect their general character; or

b) Sections 72A(3), 73(3) or 73(7) of the Papua New Guinea Income Tax Act 1959 as amended, so far as they were in force on, and have not been modified since, the date of signature of this Convention, or have been modified only in minor respects so as not to affect their general character: and provided always that the competent authority of Papua New Guinea has certified that any such exemption or relief from Papua New Guinea tax given under these Sections has been granted in order to promote industrial, commercial, scientific, educational or other development in Papua New Guinea and the competent authority of the United Kingdom has accepted that such exemption or relief has been granted for such purpose; or

c) any other provision which may subsequently be made granting an exemption or reduction of tax which is agreed by the competent authorities of the Contracting States to be of a substantially similar

character, if it has not been modified thereafter or has been modified only in minor respects so as not to affect its general character. Provided that relief from United Kingdom tax shall not be given by virtue of this paragraph in respect of income from any source if the income arises in a period starting more than 10 years after the exemption from, or reduction of, Papua New Guinea tax was first granted in respect of that source.

ANNEX IV

TAX AVOIDANCE SCHEME I

The conduit-scheme example described below has been reproduced from the New Zealand note SG/EMEF/CFA(96)18 to the EMEF meeting in Paris on 26-27 September 1996.

The following scheme is designed effectively to offset tax sparing credits against tax liabilities that do not relate to the foreign investment which gave rise to the tax sparing credit. The scheme has particular application in situations where the taxpayer has excess tax sparing credits. The scheme came to New Zealand's attention three years ago and precipitated renegotiation of the tax sparing provision in six of New Zealand's treaties to include an anti-avoidance rule to stop the scheme. Two of the schemes discovered involved loans of hundreds of millions of US dollars. More recently, during an audit of an international financial institution, we discovered correspondence confirming that the scheme is being used in Asia.

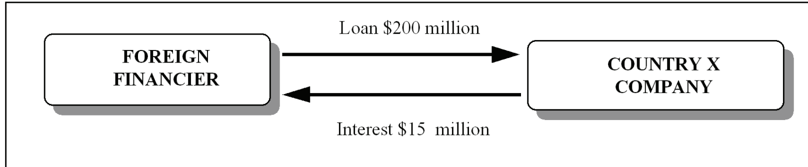
Tax sparing provisions in tax treaties are intended to prevent the home country clawing back a tax incentive by the host country. Where there is no tax liability in the home country in respect of the income that is spared by the host country, the tax sparing credits should not, in principle, be available to offset the tax liability on other unrelated income. New Zealand's tax law does not allow foreign tax credits (including tax sparing credits) to offset liabilities on other non-related income. However, as the examples below will show, this effect may be achieved by allocating the income and expenditure through different legal entities. As a result, this scheme exposes countries that give tax sparing to being used as conduits for loans destined for developing countries. The scheme can erode their existing tax bases by an amount equal to the value of the tax spared by the host country.

The scheme is illustrated using three scenarios. They assume a company resident in a developing country (Country X) requires a loan of $200 million to fund a development project that is approved under that country's various economic expansion incentives. An international financier ("Foreign Financier") agrees to lend the money at a rate of 7.5 per cent per annum.

Scenario one – direct loan from Foreign Financier to Country X Company

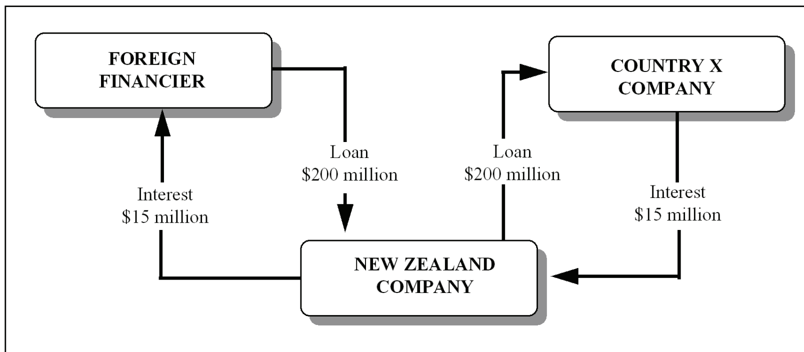
This scenario illustrates the substance of the transactions that are outlined in the examples that follow: $200 million is loaned by Foreign Financier to "Country X Company", a company resident in Country X which offers a number of tax concessions, including a tax exemption for interest paid to non-residents.

Under this scenario $15 million interest is paid by Country X Company to Foreign Financier. No tax is imposed in Country X since the interest is exempt under one of Country X's economic expansion incentives. Foreign Financier may or may not be taxed on the $15 million interest income, depending on the tax system in the country in which it is resident.



Scenario two – loan from Foreign Financier to Country X Company, but loan is channelled through a New Zealand company

This is similar to scenar io one, except the loan is channelled through New Zealand. The New Zealand part of the transaction is essentially a back-to-back loan arrangement. "New Zealand Company" earns $15 million interest income but is entitled to a tax deduction of the $15 million interest expense that relates to the income. We assume that New Zealand has granted tax sparing to Country X on this interest income at a rate of 10 per cent, being the maximum tax on gross interest typically set under our tax treaties.



The tax consequences are as follows:

- Country X: No Country X tax is imposed because the tax is spared under one of Country X's economic expansion incentives.
- New Zealand: New Zealand Company pays no New Zealand tax since its net profit is nil (interest income equals its interest expenses). Tax credits for tax spared under the New Zealand/Country X tax treaty are not used, therefore, as there is no New Zealand tax liability.
- The interest income paid from New Zealand to Foreign Financier may be subject to either interest withholding tax of 10 per cent to 15 per cent, or a 2 per cent levy.[1]

1. The rate may be set by a tax treaty or domestic law and some instruments are exempt from income tax but subject to a levy.

- Foreign Country: Foreign Financier may or may not be subject to tax, depending on the tax system in the country in which it is resident.

In summary, nothing is gained by using New Zealand as a conduit for a simple back-to-back financing arrangement.

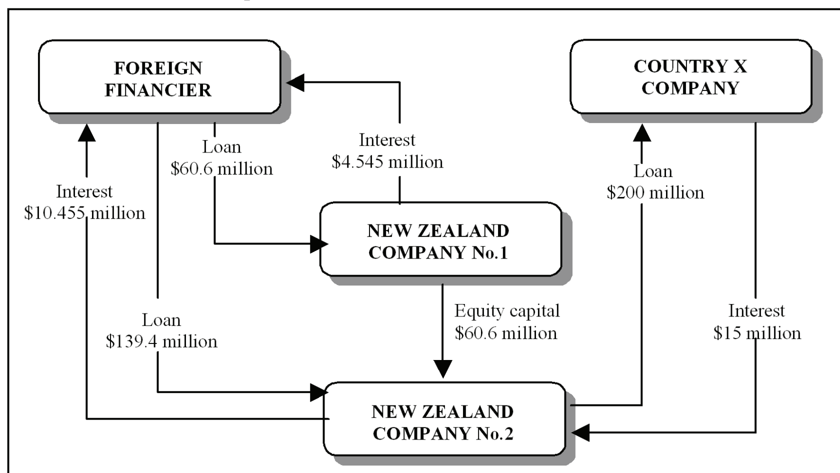
Scenario three – similar to scenario two, except two New Zealand companies are used – one to soak up the tax sparing credits and the other to accumulate tax losses

A tax-effective structure ensures that the tax spared credits are soaked up by the recipient company. This is done by splitting the interest expenditure (and loans) between two companies to create a profit in the credit soak-up company. The interest expenses (not required by the tax credit soak-up company) are passed (typically sold) to a profitable New Zealand company that can offset them against other income or accumulate them as tax losses for future use.

As illustrated below, the $200 million loan from Foreign Financier is split between the two New Zealand companies in the following proportions:

- "New Zealand Company No. 1" (NZ Co 1) – $60.6 million; and
- "New Zealand Company No. 2" (NZ Co 2) – $139.4 million.

NZ Co 1 passes the funds that it borrowed ($60.6 million) on to NZ Co 2 by way of an equity capital injection (for example, a purchase of shares in NZ Co 2). NZ Co 2 then lends the full $200 million to Country X Company. We assume again that New Zealand has granted tax sparing to Country X on this interest income at a rate of 10 per cent.



Country X Company pays $15 million interest to NZ Co 2. NZ Co 2 is taxed in New Zealand as follows:

Interest income	15 000 000
Interest expenses	10 454 545
Net profit	4 545 455
Tax on net profit (33 per cent)	1 500 000
Tax sparing credits (10 per cent x $15 million)	(1 500 000)
Tax to pay	Nil

NZ Co 1 has incurred an interest expense of $4,545,455. This translates to a net loss of the same amount on this transaction because it receives no current taxable income from its equity investment in NZ Co 2. This loss can be offset against other income of NZ Co 1 or offset against the income of another company in the same group of companies.

The tax consequences are as follows:

- Country X: No Country X tax is imposed since the tax is spared under one of Country X's economic expansion incentives.
- New Zealand: NZ Co 2 pays no New Zealand tax because its $1 500 000 tax liability is eliminated by a tax sparing credit.

NZ Co 1 is left with a tax loss of $4 545 455 which may be offset against other New Zealand income. The tax benefit of this loss – which is borne by the New Zealand tax base – is $1 500 000 ($4 545 455 x 33 per cent). This is equivalent to the amount of the tax sparing credit.

The interest income paid from New Zealand to Foreign Financier may be subject to either interest withholding tax of 10 per cent to 15 per cent, or a 2 per cent levy

- Foreign Country: Foreign Financier may or may not be subject to tax, depending on the tax system in the country in which it is resident.

By channelling debt investments through a country that grants tax sparing credits, and ensuring that an appropriately tax-planned structure is used to soak up the spared foreign tax credits, a tax benefit equal to the value of the tax spared credits can be obtained. This is contrary to the purpose of tax sparing, which is intended to prevent the home country clawing back the tax incentive of the developing country. It is not there to give a cash subsidy equal to the value of the tax spared by the developing country.

The example has been presented in a simplified form so that the concept can be understood. In the actual schemes that we have encountered, the tax benefit was shared between the foreign financier, a New Zealand company and the company in the developing country (which was to receive a

discounted rate of interest). The schemes did not proceed because New Zealand and the treaty partners concerned quickly inserted an anti-avoidance rule in the treaties which permit the New Zealand competent authority to deny tax sparing credit claims if the provision is being abused. This anti-avoidance rule is discussed in more detail later in this paper. We also considered amending New Zealand's domestic law to counter the scheme, but we could not find a suitable remedy. The tax treaty solution appears to have deterred international financiers from using the treaties concerned, although some financiers have advised that they will instead run the scheme through other countries with tax sparing provisions.

We also became aware of schemes that were to use a structure similar to the one outlined above, except the debt funding was to flow from the developing country to New Zealand and then back to the developing country. The sole purpose of this circular flow of funds would be to exploit the tax sparing provision in the tax treaty. We suspect that the lender and borrower in the developing country were either the same entity or associated entities.

ANNEX V

TAX AVOIDANCE SCHEME II

The routing-scheme example described below has been reproduced from the Australian note SG/EMEF/CFA(96)17 to the EMEF meeting in Paris on 26-27 September 1996.

The largest scheme so far encountered in Australia involves a circular flow of funds. A series of loans were to be purportedly made by an Australian financial institution to a major foreign bank via an intermediary finance company resident in a developing country with which Australia had agreed under a tax treaty to tax spare interest withholding tax forgone by that country under a particular development incentive tax concession. The foreign bank then effectively was to pay the loan moneys back to the Australian financial institution. Interest on such loans were normally subject to 10 per cent interest withholding tax by the developing country. However, the Finance Minister of that country agreed to reduce the interest withholding tax rate on these loans to 1.5 per cent under the relevant development incentive.

Judged against a test of commercial reality, the proposed scheme was artificial and contrived, with the transactions being intended to take place in the space of 30 minutes. Although ostensibly the proposed transactions involved funds of several billion Australian dollars, the transactions were to use only approximately $A 200m, which was to be made available to the intermediary finance company and most of that amount would have been returned immediately to the Australian financial institution in the form of prepaid interest. The scheme would have enabled that financial institution to incur a notional loss which was approximately sufficient in amount to offset the interest income it had earned. The “tax spared” foreign tax credit in respect of the interest withholding tax was to be offset against the tax payable on other foreign income of the financial institution. Over the duration of the scheme the cost to Australian revenue would have been in the order of $A 100m. It was only by means of strong representations to its treaty partner that Australia was able to prevent the scheme from being implemented.

ANNEX VI

ANTI-ABUSE PROVISIONS

Country model tax sparing anti-abuse provisions

New Zealand: Notwithstanding paragraph (...) of Article ... [tax sparing provision in the Elimination of Double Taxation Article] of the Agreement, a New Zealand resident deriving income from [other country], being income referred to in that paragraph, shall not be deemed to have paid [other country] tax in respect of such income where the competent authority of New Zealand considers, after consultation with the competent authority of [other country], that it is inappropriate to do so having regard to:

a) whether any arrangements have been entered into by any person for the purpose of taking advantage of paragraph (...) of Article ... for the benefit of that person or any other person;

b) whether any benefit accrues or may accrue to a person who is neither a New Zealand resident nor a resident of [other country];

c) the prevention of fraud, evasion, or avoidance of the taxes to which the Agreement applies;

d) any other matter which the competent authorities consider relevant in the particular circumstances of the case including any submissions from the New Zealand resident concerned.

Australia: (Host country) tax forgone shall not be deemed to have been paid in respect of income derived from any scheme entered into by an Australian resident with the purpose of using [host country] as a conduit for income or as a location of property in order to evade or avoid Australian tax through the exploitation of the Australian foreign tax credit provisions, or to confer a benefit on a person who is neither a resident of Australia, nor of (the host country).

ANNEX VII

ARTICLE 23 B OF THE COMMENTARY TO THE OECD MODEL TAX CONVENTION

C. The relation in special cases between the taxation in the State of source and the ordinary credit method

1. In certain cases a State, especially a developing country, may for particular reasons give concessions to taxpayers, *e.g.* tax incentive reliefs to encourage industrial output. In a similar way, a State may exempt from tax certain kinds of income, *e.g.* pensions to war wounded soldiers.

2. When such a State concludes a convention with a State which applies the exemption method, no restriction of the relief given to the taxpayers arises, because that other State must give exemption regardless of the amount of tax, if any, imposed in the State of source (see Section III, paragraph 3). But when the other State applies the credit method, the concession may be nullified to the extent that such other State will allow a deduction only of the tax paid in the State of source. By reason of the concessions, that other State secures what may be called an uncovenanted gain for its own Exchequer.

3. Should the two States agree that the benefit of the concessions given to the taxpayers in the State of source are not to be nullified, a derogation from paragraph 2 of Article 23 A, or from Article 23 B will be necessary.

4. Various formulae can be used to this effect, as for example:

a) the State of residence will allow as a deduction the amount of tax which the State of source could have imposed in accordance with its general legislation or such amount as limited by the Convention (*e.g.* limitations of rates provided for dividends and interest in Articles 10 and 11) even if the State of source, as a developing country, has waived all or part of that tax under special provisions for the promotion of its economic development;

b) as a counterpart for the tax sacrifice which the developing country makes by reducing in a general way its tax at the source, the State of residence agrees to allow a deduction against its own tax of an amount (in part fictitious) fixed at a higher rate;

c) the State of residence exempts the income which has benefited from tax incentives in the developing country.

Contracting States are free to devise other formulae in the course of bilateral negotiations.

5. If a Contracting State agrees to stimulate especially investments in the other State being a developing country, the above provisions will generally be accompanied by guarantees for the investors, that is to say, the Convention

will limit the rate of tax which can be imposed in the State of source on dividends, interest and royalties.

6. Moreover, time restrictions or time limits can be provided for the application of the advantages referred to in formula *a*), and possibly *c*), above: the extended credit (or the exemption) may be granted only in respect of incentives applied temporarily in developing countries, or only for investments made or contracts concluded in the future (for instance, from the date of entry into force of the Convention) or for a determined period of time.

7. Thus, there exists a considerable number of solutions to this problem. In fact, the concrete effects of the provisions concerned can also vary as a result of other factors such as the amount to be included in the taxable income in the State of residence (formulae *a*) and *b*) above); it may be the net income derived (after deduction of the tax effectively paid in the State of source), or the net income grossed-up by an amount equal to the tax effectively paid in the State of source, or to the tax which could have been levied in accordance with the Convention (rates provided for in Articles 10 and 11) or to the tax which the State of residence agrees to allow as a deduction.

ANNEX VIII

RECOMMENDATION OF THE COUNCIL ON THE GRANTING AND DESIGN OF TAX SPARING IN TAX CONVENTIONS

THE COUNCIL,

Having regard to Article 5 b) of the Convention on the Organisation for Economic Co-operation and Development of 14 December 1960;

Having regard to the Recommendation of the Council of 23 October 1997 concerning the Model Tax Convention on Income and on Capital C(97)195;

Having regard to the Report on tax sparing: "Tax Sparing: A Reconsideration" [DAFFE/CFA(97)3/REV2], hereafter referred to as the Report;

Considering that the granting of tax sparing in tax conventions may offer wide opportunities for tax planning and tax avoidance;

Considering that the granting of tax sparing in tax conventions may have the effect of provoking harmful tax competition between countries;

Having regard to the need to develop a more coherent approach among member countries and non-member countries towards the granting and design of tax sparing in tax conventions;

I. RECOMMENDS to the Governments of member countries that, in negotiating and concluding tax treaties, they follow the recommendations set out in the Report on the use and design of tax sparing provisions, as it may be amended from time to time; and

II. INVITES the Governments of member countries to inform, as appropriate, the Committee on Fiscal Affairs of any modification in their policy on the use and design of tax sparing provisions;

III. INSTRUCTS the Committee on Fiscal Affairs:

1. to pursue its work on issues pertinent to tax sparing; and
2. to develop a dialogue with non-member countries that request tax sparing, with the aim of developing a more coherent position on the granting and design of tax sparing.

The Application of the OECD Model Tax Convention to Partnerships

(adopted by the OECD Committee on Fiscal Affairs on 20 January 1999)

Foreword

This publication, the sixth in the series "Issues in International Taxation", includes the report entitled "The Application of the OECD Model Tax Convention to Partnerships" which the Committee on Fiscal Affairs adopted, and decided to make available to the public, on 20 January 1999.

The report deals with the application of the provisions of the OECD Model Tax Convention, and indirectly of bilateral tax conventions based on that Model, to partnerships. It puts forward a number of changes to the Model Tax Convention which will be included in the next update to the Model.

At the time of adopting the report, the delegations for France, Germany, the Netherlands, Portugal and Switzerland have expressed reservations on various aspects of it. These reservations are reproduced in Annex II.

I. INTRODUCTION

I.1 Background

1. In 1993, the Committee formed a Working Group to study the application of the Model Tax Convention to partnerships, trusts, and other non-corporate entities. This first report by the Working Group, which the Committee adopted on 20 January 1999, focuses exclusively on partnerships. The Committee recognises, however, that many of the principles discussed in its report may also apply with respect to other non-corporate entities and therefore intends to now examine the application of the Model Tax Convention to these other entities in light of this report.

2. In this respect, it should also be noted that the references to "partnerships" in this report cover entities that qualify as such under civil or commercial law as opposed to tax law. Thus the term "partnership", as used in this report, does not imply anything about the tax treatment of the relevant entity and should not be confused with a reference to entities, whether partnerships or not, which are treated as transparent for tax purposes.

3. At the beginning of the work on this topic, it was decided that this work should generally focus on practical cases and an approach based on the discussion of factual examples was therefore adopted. It was quickly found that many of the problems that were brought to the attention of the Committee arose from so-called "conflicts of qualification" – cases where the treaty partners interpret or apply the treaty in different ways. The Committee agreed that while this broader issue extended beyond the treatment of partnerships under tax conventions, it should nevertheless be dealt with in the context of this work on partnerships.

I.2 Organisation of the report

4. As previously indicated, this report focuses on specific factual examples. For each example, the facts and, where applicable, relevant aspects of domestic tax laws are described. The Committee's analysis of how the OECD Model Tax Convention applies in the example is then presented and, where appropriate, changes to the Model Tax Convention are put forward.

5. Section II discusses various aspects of the application of tax conventions by the State of source where partnerships are involved. It includes a discussion of the entitlement to treaty benefits of partners and partnerships in various circumstances.

6. Section III addresses issues arising from the application of tax conventions by the State of residence. Section III.1 discusses problems related to conflicts of qualification while Section III.2 discusses problems related to

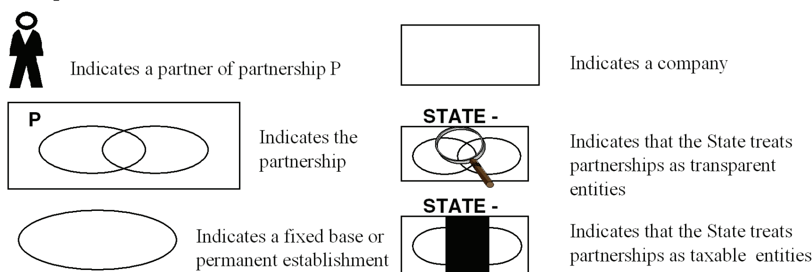
conflicts of income allocation.

7. Annex I includes changes to the Model Tax Convention which are either specifically included in the report or reflect its contents. Annex II includes general observations by France, Germany, the Netherlands, Portugal and Switzerland. Annex III includes a list of entities found in the countries that have co-operated to the preparation of this report.

8. The following abbreviations are used in this report:

- P = The partnership
- A and B = Partners in P
- State P = The State in which P is located
- State R = The State of residence of one or all the partners
- State S = The State of source, *i.e.* the State in which income arises, where three States are involved

9. Similarly, the following symbols are used in the various diagrams used in this report:



II. APPLICATION OF TAX CONVENTIONS BY THE STATE OF SOURCE

II.1 Preliminary remarks on the tax treatment of foreign entities

10. In addressing the issue of how tax conventions apply to partnerships, a useful starting point is to examine how foreign entities are treated for purposes of the taxation, by the State of source, of income derived from its territory.

11. In most member countries, as a matter of principle, tax laws apply on the basis of the legal relationship deriving from other branches of the law. Thus the tax laws of these countries, when referring to partnerships, will, absent special tax definitions, refer to those entities that constitute partnerships according to domestic civil or commercial law.

12. Difficulties often arise, however, where income is derived by an entity organised under the laws of another jurisdiction. In that case, the entity will

have to be classified for purposes of the application of the tax laws of the country where the income is derived, regardless of whether or not that classification is compatible with the civil or commercial law system of the jurisdiction from which the entity derives its legal status.

13. For example, if the tax system of a country recognises only individuals, companies and partnerships (but not trusts) as taxpayers and provides for a different tax treatment for these three types of taxpayers, that country will have to "force" foreign entities in one or the other of these categories (with more or less difficulty depending on the similarity of the civil and commercial law of the countries concerned) for purposes of applying its tax system to domestic income derived by these foreign entities.

14. In doing so, the practice of most countries is to adopt the same approach as the one they apply in a purely domestic context. They will therefore apply their domestic tax classification to foreign entities on the basis of the foreign law's legal characteristics of the entity. In the previous example, the country, for the purposes of taxing the domestic income of a trust established under the law of a foreign jurisdiction, will typically examine the legal characteristics of the trust as they derive from the trust law of the foreign jurisdiction in order to determine whom it should tax and whether that person should be taxed as an individual, company or partnership, which are the only categories recognised under its tax law.

15. In a system of international taxation where income taxes are levied on the basis of both residence and source, this means that, in addition to the well-known problem of the same item of income being taxed in the State of residence and the State of source, there will be risks of double-taxation or non-taxation associated with:

- the different classification of a given entity in the State of residence and the State of source,
- the different tax treatment, in these States, of a given entity despite common classification.

These risks, which are further analysed in the next two subsections, are compounded when the participants in the entity (*e.g.* the partners of a partnership) reside in a different State from that in which the entity has been established. Section II.2 discusses how these differences are particularly important for partnerships.

II.2 Differences that affect the tax treatment of partnerships

a) Different classification

16. While most, if not all, member countries recognise the concepts of company and of partnership for tax purposes, their definitions of these two concepts may vary.

17. In most cases, the similarities between the legal systems of the member countries will be sufficient to ensure that what is a company or a partnership in the country where it has been established is recognised as such, for tax purposes, in other countries. Entities, however, that are not widespread in the civil or commercial laws of the member countries will create difficulties if they cannot easily be classified in one of these categories but need to be so classified for tax purposes. In that case, it is possible that one country will treat the entity as a partnership while the other will treat it as a company, with completely different tax results.

b) Different treatment

18. Problems will also arise, however, where two countries classify a given entity in the same way but treat that entity in different ways.

19. These problems are particularly important for partnerships and most of the examples in this report are based on these problems. A well-known difficulty is that while some countries treat partnerships as transparent entities, imposing no tax on the partnership itself but taxing each partners on its share of the partnership's income, others treat the partnership as a taxable entity, usually taxing the partnership on its income as if it were a company.

20. There are, however, many other possible differences which may result in double taxation or non-taxation, some of which are discussed in this report. For instance, while some countries accept that a partner may also be a creditor of the partnership and may therefore derive interest income from the partnership, others consider that no interest may be paid to a partner, any payment of what purports to be interest being treated as a distribution of the income of the partnership.

21. Other differences relate to how countries apply the transparency approach. The mere fact that the income of the partnership is taxed at the partners' level does not, in itself, address all issues related to the computation of the tax to be paid on that income. Tax rules often differ depending on the nature of the taxpayer or on the relationship between the taxpayer and another party to a transaction. Countries may have different views as to what extent the partnership should be ignored in applying rules based on the nature of the taxpayer or on its relationship with another person (the question of the extent to which a transparent partnership should be ignored for the

purposes of the application of the provisions of tax conventions is discussed in Section II.6 below).

22. To assist countries in identifying cases where these differences may create problems, the Committee has decided to develop a list that describes the tax treatment of entities established under the laws of each country and commonly used for commercial and investment purposes. That list is included in Annex III.

c) The effect on tax conventions

23. The differences described above create a number of difficulties with respect to the application of the provisions of tax conventions.

24. The Commentary on Article 1 of the Model Tax Convention already refers to the problem described in paragraph 19 above in the following words:

> The domestic laws of the various OECD member countries differ in the treatment of partnerships. The main issue of such differences is founded on the fact that some countries treat partnerships as taxable units (sometimes even as companies) whereas other countries disregard the partnership and tax only the individual partners on their share of the partnership income.

25. The difficulties that this and other differences create in the context of the application of the provisions of tax conventions are discussed throughout this report. This section focuses on the problems that the differences described above create for the application of the Convention by the State of source, including the determination of who is entitled to the benefits of a tax convention in relation to income derived by a partnership (Section II.3) and the application of the provisions of the Convention that are dependent upon certain characteristics or attributes of the taxpayer (Section II.6). Section III deals with the problems related to the application of the Convention by the State of residence, focusing on conflicts of qualification (Section III.1) and conflicts of income allocation (Section III.2).

26. The Committee believes that many of these difficulties may be solved through a better co-ordination in the application and interpretation of some of the provisions of tax conventions. This report puts forwards a number of suggestions in that respect.

II.3 When is a partnership entitled to the benefits of a tax convention?

27. Where income is derived from a particular State, the determination of the tax consequences in that State will first require the application of the domestic tax laws of that State. It is the provisions of these laws that will determine who may be subjected to tax on that income in that State. The

provisions of tax conventions, however, may then intervene to restrict or eliminate the taxing rights originating from domestic law where a person, usually but not necessarily the taxpayer identified under domestic law, is eligible for the benefits of the tax convention in relation to that income.

28. The clear rule of Article 1 of the Model Tax Convention is that only persons who are residents of the Contracting States are entitled to the benefits of the tax Convention entered into by these States. Where income is earned by a partnership, the issue of whether the partnership itself is entitled to the benefits of the Convention will depend on whether the partnership qualifies as a person who is a resident of a Contracting State under the definitions of Article 3 and of paragraph 1 of Article 4.

a) Is a partnership a "person"?

29. For a partnership, entitlement to treaty benefits will therefore first depend on whether it qualifies as a "person". Subparagraph 1 *a*) of Article 3 of the Model defines a "person" for purposes of the Convention as "an individual, a company and any other body of persons". Paragraph 2 of the Commentary on Article 3 provides:

> The definition of the term 'person' given in subparagraph *a*) is not exhaustive and should be read as indicating that the term 'person' is used in a very wide sense (*cf.* especially Articles 1 and 4). The definition explicitly mentions individuals, companies and other bodies of persons. From the meaning assigned to the term 'company' by the definition contained in subparagraph*b*) it follows that, in addition, the term 'person' includes any entity which, although itself not a body of persons, is treated as a body corporate for tax purposes. Thus, *e.g.* a foundation (*fondation, Stiftung*) may fall within the meaning of the term 'person. Special considerations for the application of the Convention to partnerships are found in paragraphs 2 to 6 of the Commentary on Article 1.

30. The Commentary on Article 1, however, does not discuss the issue of whether a partnership is a "person" within the meaning of Article 3. While the practices of member countries are not entirely uniform in this respect, the Committee has determined that partnerships should be considered to be "persons" within the meaning of the definition found in Article 3. In most countries, partnerships (as well as the individual partners) will be considered to be "persons" within the meaning of Article 3 either because the partnerships fall within the definition of company or because they are bodies of persons. The Committee has therefore decided to delete the last sentence

of paragraph 2 of the Commentary on Article 3 and to replace it with the following sentence:

> Partnerships will also be considered to be 'persons' either because they fall within the definition of 'company' or, where this is not the case, because they constitute other bodies of persons.

31. The Committee has noted, however, that the definition of the term "national" in subdivision 1 *f*) (*ii*) of Article 3 may give rise to an implication that partnerships are not "persons" for purposes of the Convention. That definition provides that the term "national" includes "any legal person, partnership or association deriving its status as such from the laws in force in a Contracting State". As a matter of grammar and logic, a specific term that is included within a broader general term is not ordinarily given separate mention in a list that contains the general term.[1]

32. In order to avoid any confusion that may result from that definition, the Committee has agreed to add the following paragraph to the Commentary on Article 3:

> The separate mention of partnerships in sub-paragraph 1 *f*) is not inconsistent with the status of a partnership as a person under sub-paragraph 1 *a*). Under the domestic laws of some countries, it is possible for an entity to be a 'person' but not a 'legal person' for tax purposes. The explicit statement is necessary to avoid confusion.

b) Is a partnership a "resident of a Contracting State"?

33. Paragraph 3 of the Commentary on Article 1 deals specifically with the problem of whether a partnership qualifies as a "resident" for treaty purposes. The Commentary states:

> First, the question arises whether a partnership as such may invoke the provisions of the Convention. Where a partnership is treated as a company or taxed in the same way, it may reasonably be argued that the partnership is a resident of the Contracting State taxing the partnership on the grounds mentioned in paragraph 1 of Article 4 and therefore, falling under the scope of the Convention, is entitled to the benefits of the Convention. In the other instances mentioned in paragraph 2 above, the application of the Convention to the partnership as such might be refused, at least if no special rule is provided for in the Convention covering partnerships.

34. The Committee discussed this paragraph and concluded that its analysis is correct. If the State in which a partnership has been organised treats that partnership as fiscally transparent, then the partnership is not "liable to tax" in that State within the meaning of Article 4, and so cannot be a resident for purposes of the Convention. Although inconvenient at times (*e.g.*

paragraph 89 below), there appears to be little scope for a contrary argument under the current wording of Article 4.

35. To clarify this point, the Committee has agreed to delete the last sentence of paragraph 3 of the Commentary on Article 1 and to replace it with the following sentences:

> Where, however, a partnership is treated as fiscally transparent in a State, the partnership is not 'liable to tax' in that State within the meaning of paragraph 1 of Article 4, and so cannot be a resident thereof for purposes of the Convention. In such a case, the application of the Convention to the partnership as such would be refused, unless a special rule covering partnerships were provided for in the Convention. Where the application of the Convention is so refused, the partners are entitled, with respect to their share of the income of the partnership, to the benefits provided by the Conventions entered into by the States of which they are residents to the extent that the partnership's income is allocated to them for the purposes of taxation in their State of residence (see paragraph 8.2 of the Commentary on Article 4).

36. The Committee recognised that the determination of whether a partnership is "liable to tax" in a given State may present practical difficulties having regard to the different systems that countries use to impose tax on partnerships' income. It believes that the list referred to in paragraph 22 above, which is included in Annex III, would assist countries in dealing with these difficulties.

37. The Committee discussed in detail how the concept of "liable to tax" should be understood in the context of different systems for taxing partnerships' income. The Committee first discussed cases where domestic tax laws create intermediary situations where a partnership is partly treated as a taxable unit and partly disregarded for tax purposes. While this may create practical difficulties with respect to a very limited number of partnerships, it is a more important problem in the case of other entities such as trusts. For this reason, the Committee decided to deal with this issue in the context of follow-up work to this report.

38. The Committee then examined two common approaches to taxation of partnerships. In many countries, the tax laws provide that income derived by a partnership from a particular source must be computed at the partnership level as if the partnership were a distinct taxpayer. Each partner is then allocated his share of that income which retains its character and is added to his income for purposes of determining his taxable income. His taxable income, including his share of the partnership's income is then reduced by the personal allowances and deductions to which he is entitled and tax is then

determined, assessed and paid at the partner's level. In such cases, it is clear that the partnership is not itself liable to tax.

39. In other countries, the income and the tax payable is computed in a similar way, but the tax payable by the partners is then aggregated at the level of the partnership which is then assessed for the total amount of the tax. In these cases, the assessment of the tax in the hands of the partnership is a collection technique that does not change the fact that the tax payable on the income of the partnership is determined at each partner's level taking into account the other income of that partner, the personal allowances to which he is entitled and the tax rate applicable to him (which may vary depending on his total income or his nature). In such cases, the partnership is also not liable to tax.

40. The Committee agreed that for purposes of determining whether a partnership is liable to tax, the real question is whether the amount of tax payable on the partnership income is determined in relation to the personal characteristics of the partners (whether the partners are taxable or not, what other income they have, what are the personal allowances to which they are entitled and what is the tax rate applicable to them). If the answer to that question is yes, then the partnership should not itself be considered to be liable to tax. The fact that the income is computed at the level of the partnership before being allocated to the partners, that the tax is technically paid by the partnership or that it is assessed on the partnership as described in the preceding paragraph will not change that result.

41. The fact that a partnership may be said to be liable to tax in a State will not, however, be sufficient for it to be considered a resident of that State for purposes of tax conventions. Paragraph 1 of Article 4 also requires that the liability to tax in that State be caused by one of the criteria listed therein (*e.g.* residence, domicile etc.). Thus, for a partnership to be a resident of a Contracting State, it has to be liable to tax in that State by reason of one of these criteria.

42. The provisions of tax conventions will apply differently depending on whether or not a partnership qualifies as a resident. Where a partnership does not so qualify because it is the partners who are liable to tax on the partnership's income, the income derived by the partnership should be considered to keep the nature and source that it had in the hands of the partnership for purposes of the provisions of a tax convention. This corresponds to the situation that is generally provided for under the domestic laws of the countries that do not treat partnerships as taxable entities. Thus, where a partnership is treated as transparent for purposes of tax conventions because it is the partners rather than the partnerships who are liable to tax on the partnership's income, that income will, when applying the relevant

Convention, keep the nature and source that it had in the hands of the partnership for purposes of taxation in the hands of the partners.[2]

43. While the Convention generally does not apply to partnerships that are treated as fiscally transparent since they do not meet the criteria of paragraph 1 of Article 4, some countries have included partnerships within the coverage of their Conventions in certain circumstances. In specially negotiated provisions, the partnership is treated as a resident to the extent that its income is subject to tax in the hands of the partners. This can come about because the partners are resident in the State in which the partnership is organised or because, in the case of non-resident partners, the partnership maintains a permanent establishment in the State of organisation and the income is attributable to the permanent establishment. If all of the income of the partnership is attributed to either resident partners or to a permanent establishment when non-resident partners are present, the partnership would be treated in the same way as a resident company which was subject to worldwide tax liability. The following text from the Protocol to the Convention between Germany and Italy illustrates the use of such specially negotiated provisions:

> A partnership is deemed to be a resident of a Contracting State in the sense of paragraph 1 of Article 4 if it has been established in accordance with the law of that State or if the main object of its activities is in that State. However, the limitations to the right to tax of the other Contracting State as provided in Articles 6 to 23 apply only insofar as the income derived from that State or the capital situated therein is subject to tax in the first-mentioned State.

44. One justification for such special provisions treating the partnership itself as resident is that they are viewed by some countries as avoiding the administrative problems involved in requiring that all partners establish that they are entitled to treaty benefits. In addition, in some cases, the provisions originated where one of the Contracting States treated partnerships as taxable entities and the other State, though applying a fiscal transparency approach, insisted on reciprocal treatment. Finally, since the income will necessarily be subject to tax in the State of organisation, providing treaty benefits will not result in double non-taxation or in the reduction of source State taxation where there is no tax in the State where the partnership has been formed.

45. On the other hand, there are some substantial problems and issues which such an approach raises. In the first place, it may be difficult to determine when the source State income is in fact attributable to a permanent establishment in the State of organisation. If the income was attributable to a third State's permanent establishment, for example, in a tax haven, the source State relief would not necessarily be matched with taxation in the State of

organisation. Secondly, where the source State relief takes the form of a reduction in withholding tax, it is not clear how the reduction should be calculated where only a "part" of the partnership is treated as a treaty resident. The reduction might inure indirectly to the benefit of a partner not otherwise entitled to benefits. In addition, the existence of the partnership allows income which is attributed to a permanent establishment in the State of organisation to qualify for treaty benefits for a third State partner where the existence of a direct permanent establishment would not give rise to similar benefits.[3]

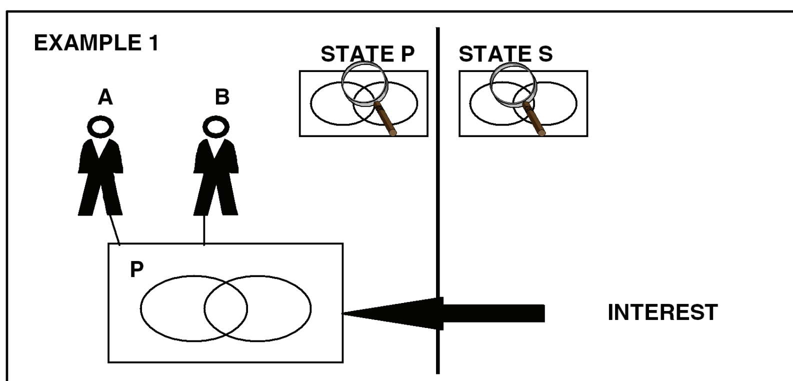
46. Given these difficulties, the Committee did not feel that the approach was promising enough to attempt to develop an alternative provision.

II.4 The partners' entitlement to treaty benefits when the partnership is not a resident

47. Where the partnership as such does not qualify as a resident under the principles developed in the preceding section, the Committee agrees that the partners should be entitled to the benefits provided by the Conventions entered into by the countries of which they are residents to the extent that they are liable to tax on their share of the partnership income in those countries. The following introductory examples illustrate the results which the Committee believes are appropriate in some commonly recurring situations. It is important to note that the solutions developed in this report do not exclude the possibility that member countries may in their bilateral relations develop different solutions to the problems of double taxation which may arise in connection with partnerships.

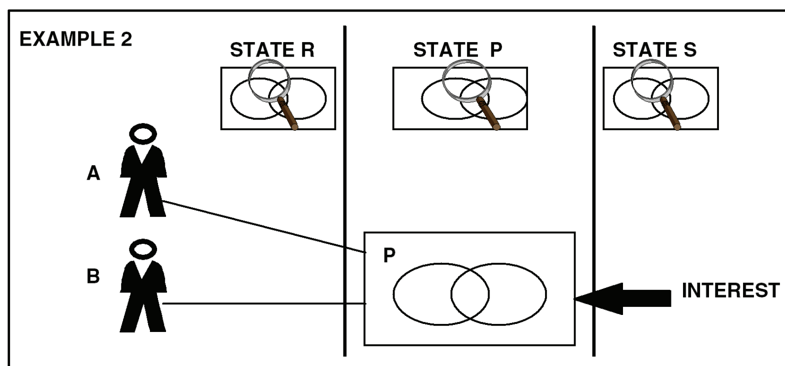
R (15)

Example 1 : *P is a partnership established in State P. A and B are P's partners who reside in State P. Both States P and S treat P as a transparent entity. P derives interest income from State S that is not attributable to a permanent establishment in State S.*



48. In this example, State S would likely determine that, under its domestic law, the relevant taxpayers are A and B. After applying its domestic law, it would then consider the application of the S-P tax Convention and, in particular, Article 11. Under paragraph 1 of Article 11, the Article applies to interest that is "paid to a resident of another state". In these circumstances, the income is appropriately viewed as paid to A and B since it is to them and not to the partnership that the income is allocated for purposes of determining their tax liability in State P. They thus have derived the income in the sense which is relevant for the application of the treaty. In effect, the source State should view the income as having "flowed through" the transparent partnership to the partners who are liable to tax on that income in the state of their residence.

Example 2: *P is an entity established in State P. A and B are P's partners who reside in State R. States R, P and S all treat P as a transparent entity. P derives interest income from State S that is not attributable to a permanent establishment in State S.*

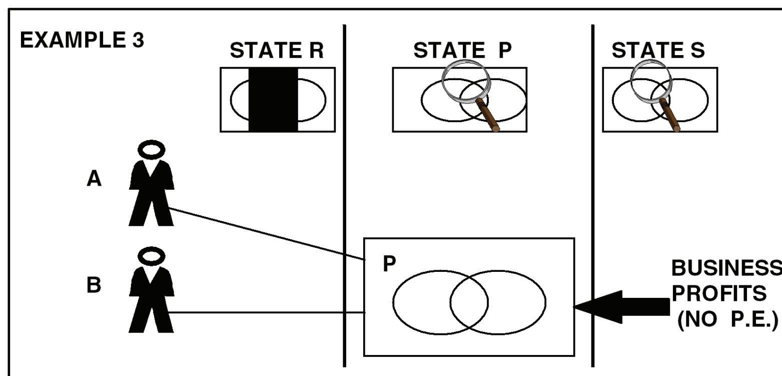


49. This example extends the basic principle illustrated in example 1 to a more complex situation involving three countries and two Conventions. As regards State S, again it will begin the analysis by determining that under its domestic law, the relevant taxpayers are A and B. In applying the S-R treaty, it would likewise determine that A and B have been allocated the income by State R and thus are liable to tax on that income for purposes of determining their entitlement to benefits under the Convention. By contrast, P may not claim benefits under the S-P Convention since it is not a resident of State P (it is not liable to tax in that State).

50. Such cases, in which the partners are not residents in the State where the partnership has been organised, raise additional difficulties for tax authorities wishing to verify a taxpayer's entitlement to treaty benefits. Clearly, states should not be expected to grant the benefits of tax conventions in cases where they cannot verify whether a person is truly entitled to these

benefits. Thus, the application of the provisions of the S-R Convention will be conditional on State S being able to obtain all the necessary information.

Example 3: *P is an entity established in State P. A and B are P's partners who reside in State R. States P and S both treat P as a transparent entity but State R treats it as taxable entity. P derives business profits from State S that is not attributable to a permanent establishment in State S.*



51. Here, unlike the first two examples, there is a difference in the allocation of the income involved among the countries. State S under its domestic law treats A and B as the relevant taxpayers. However, when it comes to apply the S-R treaty, it is crucial that State R, while it generally treats A and B as residents, does not allocate to them the income arising in State S since, under the domestic law of State R, that income is allocated to P, an entity which is not resident, *i.e.* not liable to tax in State R. Thus in these circumstances, State S would not be required to extend the benefits of the Convention to the income which State R allocates to P for purposes of determining the liability to State R's tax on that income, a conclusion which may be reached by a number of different routes as explained below. Correspondingly, for purposes of applying the S-R Convention, the treatment of P in State P is not relevant, though of course it would be important in the application of the S-P Convention as will be discussed in subsequent examples.

52. The Committee views the outcome in the above examples as resulting from an application of the Convention that takes account of the basic purposes of the Convention: to eliminate double taxation and to prevent double non-taxation. As discussed in the introductory section of this report, it recognises that the existing Convention and its Commentary do not deal explicitly with many of the issues which arise in the treatment of partnerships under the Convention. Under a literal application of the provisions of the Convention, a partnership that is not itself liable to tax would not be entitled to the benefits of the Convention and to the extent that the income derived by

R (15)

or paid to the partnership would not be considered to be derived by or paid to the partners themselves, the partners would also be precluded from claiming the benefits of the Convention with respect to the partnership's income. To avoid the result that the provisions of tax conventions do not apply to the income of a transparent partnership, it is therefore necessary to determine whether and how it would be possible to obtain the desired results under the structure of the existing Convention.

53. One broadly based approach would be to recognise as implicit in the structure of the Convention the principle that the source State, in applying the Convention where partnerships are involved, should take into account, as part of the factual context in which the Convention is to be applied, the way in which an item of income arising in its jurisdiction is treated in the jurisdiction of the taxpayer claiming the benefits of the treaty as a resident. If that State "flows through" the income to the partner, then the partner should be considered liable to tax and entitled to the benefits of the Convention of the State of which he is a resident. It may be observed, in that respect, that a partner is still to be considered liable to tax on the income which "flows through" to him where, in the State of residence, tax is not imposed on that income by virtue of, *e.g.* a participation exemption in the case of dividends or the application of the exemption method for the relief of double taxation in the case of income attributable to a permanent establishment. On the other hand, if the income, though allocated to the taxpayer under the laws of the source State, is not similarly allocated for purposes of determining the liability to tax on that item of income in the State of residence of the taxpayer claiming the benefits of the Convention, then the source State should not grant benefits under the Convention. In these latter circumstances, the underlying factual premise on which the allocation of taxing rights is based, that is, that the source State is only obliged to reduce its domestic law tax claim where the income in question is potentially liable to tax in the hands of a resident of the treaty partner, is simply not present. This interpretation, which looks at how the partnership's income is taxed by the State of residence, avoids denying the benefits of tax conventions to a partnership's income on the basis that neither the partnership, because it is not a resident, nor the partners, because the income is not directly paid to them or derived by them, can claim the benefits of the Convention with respect to that income.

54. Another approach would involve consideration of the terms of the distributive rules in the relevant Articles of the Convention. Under that analysis, in the case of dividends, interest and royalties, the inquiry would be whether or not the recipient of the item of income was the beneficial owner of the income under the laws of the State of residence of the taxpayer claiming treaty benefits and thus the taxpayer in relation to the income. In the case of a partnership treated as transparent under the laws of the source State but as

a taxable entity under the laws of the residence State, the entity itself and not the partners would be treated as the beneficial owner. Because of the treatment of the income in the State of residence, the partners would not be the beneficial owners of the income for purposes of the treaty. Thus the partners would not be entitled to treaty benefits in those circumstances and whether the entity was so entitled would depend on whether it independently qualified as a resident. Similarly, where business profits are involved, the determination of whether the profits were attributable to an enterprise "of" the residence State of the taxpayer claiming the benefits would be determined by the source State on the basis of the treatment of the situation in the residence State. Again, if the partnership was treated as an entity by that latter State, it, and not the partners, would be the relevant party which would be required to establish a claim from treaty benefits.

55. Finally, some countries would feel constrained to follow the allocation of the income under their principles of domestic law, even when that results in the income being subject to taxation in the State of source and taxation in the hands of the partners under the law of their state of residence. Even those countries, however, recognise the desirability of some mechanism to relieve the resulting double taxation and either provide for the situation in special provisions in their Conventions or at least show a willingness to relieve the double taxation through the mechanism of the mutual agreement procedure, particularly where a distribution of partnership income is made in the year in which the income is realised.

56. In the light of the preceding analysis, the Committee has therefore agreed to add the following paragraph to the Commentary to Article 4:

> 8.2 Where a State disregards a partnership for tax purposes and treats it as fiscally transparent, taxing the partners on their share of the partnership income, the partnership itself is not liable to tax and may not, therefore, be considered to be a resident of that State. In such a case, since the income of the partnership 'flows through' to the partners under the domestic law of that State, the partners are the persons who are liable to tax on that income and are thus the appropriate persons to claim the benefits of the Conventions concluded by the States of which they are residents. This latter result will obtain even if, under the domestic law of the State of source, the income is attributed to a partnership which is treated as a separate taxable entity. For States which could not agree with this interpretation of the Article, it would be possible to provide for this result in a special provision which would avoid the resulting potential double taxation where the income of the partnership is differently allocated by the two States.

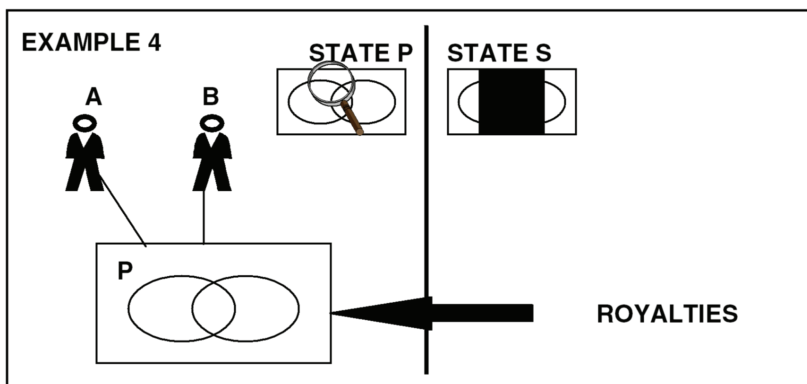
57. The following examples examine some of the implications of this general approach, as outlined in paragraphs 52 and 53, and the results that it would generate in a variety of situations.

II.5 Entitlement to treaty benefits when one State treats the partnership as a taxable entity

58. The first set of situations involve cases where one of the States treats the partnership as a taxable entity and another State views it as fiscally transparent. This question is considered first in a bilateral setting then where triangular relations are present.

a) Bilateral cases

Example 4: *P is a partnership established in State P. A and B are P's partners who reside in State P. State P treats P as a transparent entity while State S treats it as a taxable entity. P derives royalty income from State S that is not attributable to a permanent establishment in State S.*



59. This example involves the fundamental difference in the tax treatment of partnerships that has already been referred to in paragraph 19 onwards above. The question is how the State S should apply the provisions of the Convention in such a case.

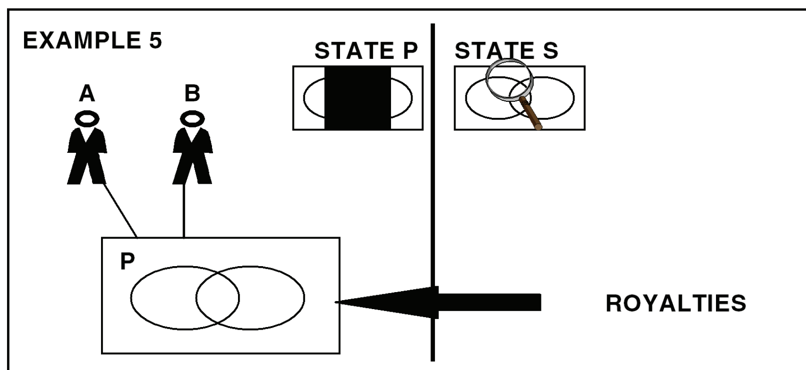
60. Under State S domestic law, the taxpayer will be partnership P. State S could then argue that since partnership P is not entitled to the benefits of the treaty, it can tax the income derived by P regardless of the provisions of the S-P Convention. This, however, would mean that the income on which A and B are liable to tax in State P would be subjected to tax in State S regardless of the Convention, a result that seems in direct conflict with the object and purpose of the Convention.

61. The Committee compared that approach, under which State S applies the provisions of the Convention by reference to the treatment of the

partnership under its domestic law, with another approach, under which State S considers the entitlement to treaty benefits of A and B, both residents of State P, under the principles put forward above. Under the latter approach, State S would determine that the provisions of the Convention should be applied to prevent it from taxing the royalties since, under these principles, the income must be considered to be paid to A and B, two residents of State P, who should also be considered to be the beneficial owners of such income as these are the persons liable to tax on such income in State P. The Committee concluded that this approach was the correct one as it is more likely to ensure that the benefits of the Convention accrue to the persons who are liable to tax on the income.

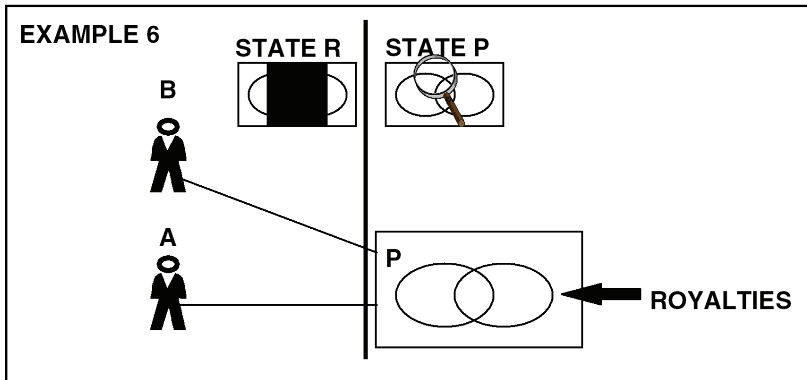
62. The Committee did not consider this approach to be inconsistent with the provisions of paragraph 2 of Article 3, under which terms not defined in the Convention have, unless the context provides otherwise, the meaning which they have under the domestic law of the Contracting State that applies the Convention. In the example, the tax treatment of the partnership in State P is part of the facts on the basis of which the terms of the Convention are to be applied. Thus, by referring to that tax treatment, State S does not adopt a particular interpretation of the terms of the Convention put forward by State P; it merely takes into account of facts required for the application of these terms. The Committee concluded that, in any event, if an interpretation based on domestic law would lead to cases where the income taxed in the hands of residents of one State would not get the benefits of the Convention, a result that would be contrary to the object and purpose of the Convention, the context of the Convention would require a different interpretation.

Example 5: *The facts are the same as in example 4 but the tax treatment of the partnership in State P and S is reversed. P is a partnership established in State P. A and B are P's partners who reside in State P. State P treats P as a taxable entity while State S treats it as a transparent entity. P derives royalty income from State S that is not attributable to a permanent establishment in State S.*



63. In this situation, in following its domestic law rules for allocating the income of the partnership, State S would treat A and B as the relevant taxpayers. However, in applying the treaty, the principles developed in Section II.4 would require that it takes into consideration that State P had allocated the income of the partnership to P. Thus, for purposes of the Convention, P would be the taxpayer entitled to claim the benefits of the Convention since it is liable to tax in State P on the income of the partnership. While, in the particular circumstances of this example, it does not make a difference whether State S considers the treaty entitlements of the partners or of the partnership, this would matter, as shown in subsequent examples, if the partners, or one of them, were not residents of State P.

Example 6: *P is a partnership established in State P. A and B are P's partners who reside in State R. State P treats P as a transparent entity while State R treats it as a taxable entity. P derives royalty income from State P that is not attributable to a permanent establishment in that state*



64. While the Committee agrees that in this situation State P should not be required to give the benefits of the Convention with respect to the royalty income, several different approaches are used to support this result. Using one approach, partners A and B, though residents as such of State R are not liable to tax on the partnership income under the allocation rules applied by State R, consequently they are not entitled to benefits under the Convention in respect of that income. P is not a resident of State R for purposes of the Convention since, from the perspective of State R, it is not a domestic taxpayer in any sense. Thus again, State P's right to tax the partnership income would not be restricted under the Convention.

65. Alternatively, as discussed in paragraph 54 above, the partners would not be entitled to benefits under the Convention because they would not be considered as beneficial owners of the income for purposes of the Convention. Adopting a more literal approach, State P might simply focus on the fact that,

under its allocation rules, the income has been paid to P and P would not qualify as a resident either of State R or State P. Here the treatment of A and B would not be relevant.

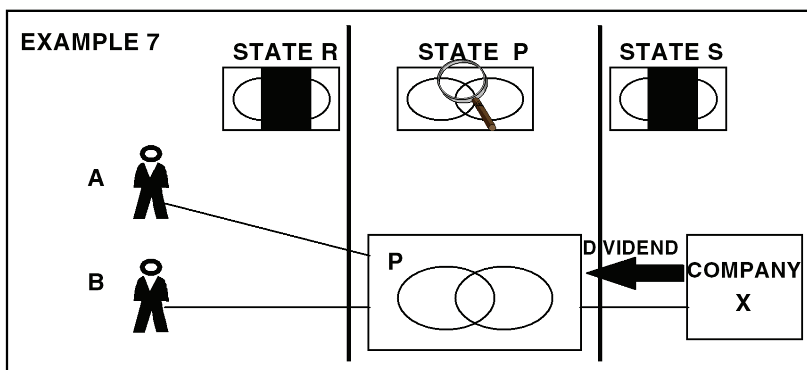
66. Finally, some countries would deny treaty benefits to A and B based on concepts of bad faith or abuse of treaty rights. The distributive rules of the Convention are based on the underlying assumption that A and B would be attributed the income on which treaty relief would be granted and where that is not the case, these general concepts would allow State P to resist any claims by A or B for benefits.

67. Example 18 below deals with the tax treatment of the subsequent distribution by P of the partnership profits to A and B.

b) Triangular cases

68. Triangular cases pose difficult problems with respect to the determination of the entitlement to treaty benefits. The Committee believes, however, that these problems may be solved through the application of the same principles put forward in paragraphs 52 and 53 above. The following examples discuss how these principles should be applied in different situations involving three states.

Example 7: *P is a partnership established in State P. A and B are P's partners who reside in State R. P owns shares in X, a company that is a resident of State S. X pays a dividend to P. States R and S treat P as a taxable entity while State P treats it as fiscally transparent.*

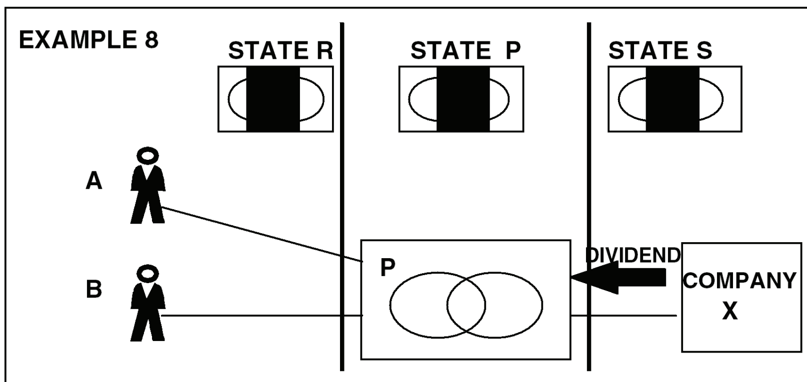


69. In this situation, the partnership is not liable to tax in State P and is therefore not a resident of that state for purposes of the P-S Convention. Similarly, though P is treated as the taxpayer for purposes of the domestic law of State S and the income is allocated to P under the domestic laws of R, P is not liable to tax in State R because it is not treated as a resident. Finally, though A and B are potentially liable to tax as residents in State R, under R's

allocation rules, the income is not allocated to them but to P. Thus P is not a resident of State R and A and B are not entitled to benefit from the R-S Convention with respect to the partnership's income. State S would thus be entitled to tax the income without restriction.

70. It should be noted that, in this example (as in the following examples), the tax treatment of partnerships in State S does not have any impact on the entitlement to treaty benefits. Thus, the S-R and S-P Conventions would still not be applicable with respect to the dividends if State S treated partnerships as transparent rather than taxable entities.

Example 8: *The facts are the same as in example 7 except that the tax treatment of the partnership in State P is reversed. P is a partnership established in State P. A and B are P's partners who reside in State R. P owns shares in X, a company that is a resident of State S. X pays a dividend to P. All States treat P as a taxable entity.*

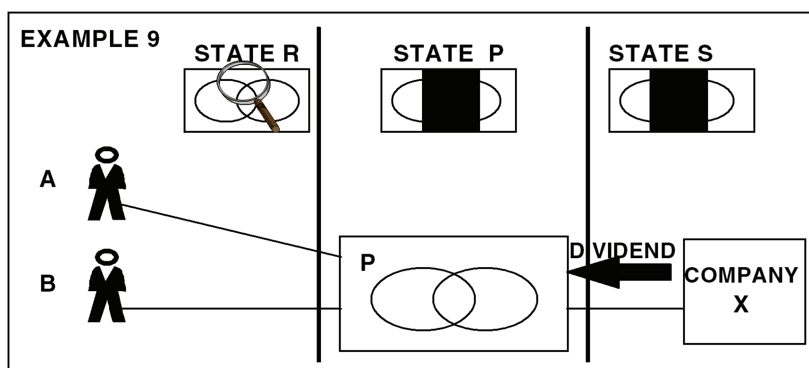


R (15)

71. In this example, partnership P is a resident of State P as it is liable to tax therein. Partners A and B should not be considered to be entitled to the benefits of the S-R Convention with respect to the partnership income as they are not liable to tax on that income. Conversely, P should be considered by State S to be entitled to the benefits of the S-P Convention in relation with the dividends it derives from that State as it is liable to tax on those dividends and should therefore be considered to be the recipient and beneficial owner of that income. Thus the S-P Convention will restrict State S right to tax the dividends, even if State S taxes the dividends in the hands of partners A and B under its domestic rules applicable to the taxation of partnerships. It should be noted, however, that since P is a partnership, it will not get the benefits of the reduced rate of tax provided for in subparagraph 2*a)* of Article 10 of the Model Tax Convention (the subparagraph expressly excludes partnerships from its application) unless the two Contracting States agree to modify subparagraph 2a) to give the benefits of the reduced rate to a partnership treated as a body corporate (*cf.* paragraph 11 of the Commentary on Article 10).

72. As already mentioned, the tax treatment of partnerships in State S does not have any impact on the entitlement to treaty benefits in this case. Thus, the S-P Convention would still be the only relevant one if State S treated partnerships as transparent rather than taxable entities.

Example 9: *The facts are the same as in example 8 except that the tax treatment of the partnership in State R is reversed. P is a partnership established in State P. A and B are P's partners who reside in State R. P owns shares in X, a company that is a resident of State S. X pays a dividend to P. State P and State S treat P as a taxable entity while State R treats it as fiscally transparent.*



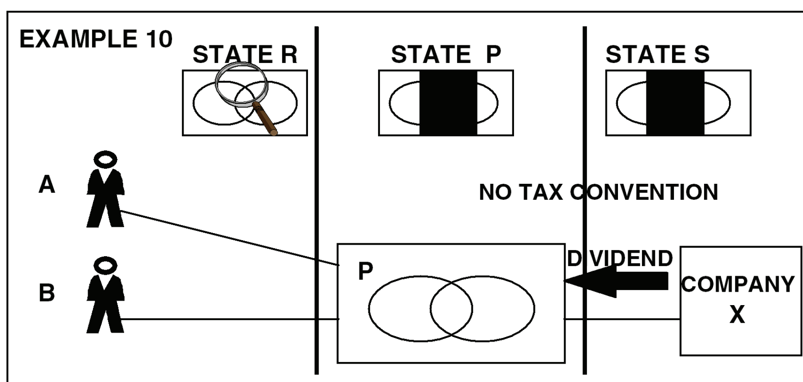
73. This example presents a case where there will be a double entitlement to treaty benefits with respect to the same income. As in the previous example, partnership P is a resident of State P as it is liable to tax therein. P should again be considered by State S to be entitled to the benefits of the S-P Convention in relation with the dividends it derives from that State as it is liable to tax on those dividends and should therefore be considered to be the recipient and beneficial owner of that income. In contrast to the previous example, however, partners A and B should also be considered to be entitled to the benefits of the S-R Convention with respect to the partnership income as they are also liable to tax on that income. Thus both the S-P and S-R Conventions will restrict State S right to tax the dividends, regardless of whether State S taxes these dividends in the hands of the partnership or of partners A and B (under its domestic rules applicable to the taxation of partnerships, it will likely tax them in the hands of the partnership). Again, the tax treatment of partnerships in State S will not have any impact on this result so that both conventions would still be applicable if State S treated partnerships as transparent rather than taxable entities.

74. The Committee agreed that this double entitlement to treaty benefits will be satisfied by State S imposing the lowest amount of tax allowed under the two treaties. Thus, if the S-R Convention restricts to 15% of the gross amount of the dividends the tax that can be levied by State S while the S-P

treaty restricts the tax to 10% of that amount, the obligations imposed on State S under both conventions will be satisfied if the tax imposed by State S does not exceed 10% of the dividends.

75. While the Committee agreed on that approach, it recognized the administrative difficulties that its implementation would generate in the case of a partnership that would have a large number of partners who would be residents of different States.

Example 10: *The facts are the same as in example 9 except that there is no tax convention between States S and P.*



R (15)

76. The Committee also discussed how the principles and conclusions formulated in its analysis of the previous examples would apply if the partnership were a resident of a state with which the State of source did not have a tax convention, including the case where the partnership was a resident of a tax haven. It concluded that same conclusions should apply as concerns the application of the Convention between the State of source and the State of residence of the partners.

77. Thus, in this example, partners A and B should be considered to be entitled to the benefits of the S-R Convention in respect of the dividends as they are both taxable in State R on these dividends.

78. As already noted, States should not, however, be expected to grant the benefits of a tax convention in cases where they cannot verify whether a person is truly entitled to these benefits. Thus if State P is a tax haven from which State S cannot obtain tax information, the application of the provisions of the S-R Convention will be conditional on State S being able to obtain all the necessary information from the partners or from State R. In such cases, State S might well decide to use the refund mechanism for the purposes of applying the limitation of tax provided for in Article 10 even though it normally applies this limitation at the time of the payment.

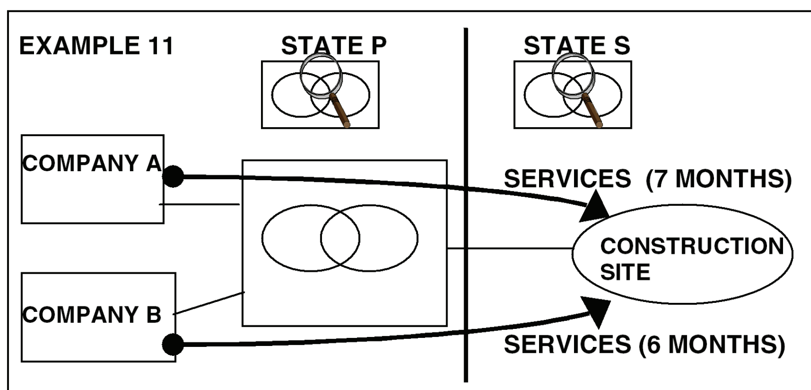
II.6 *Application of the Convention where the benefits are dependent upon certain characteristics or attributes of the taxpayer*

79. As indicated in paragraph 21 above, differences in how States apply the transparency approach may create difficulties for the application of tax conventions. Where a State considers that a partnership does not qualify as a resident because it is not liable to tax and the partners are liable to tax in their State of residence on their share of the partnership's income, it is expected that that State will apply the provisions of the Convention as if the partners had earned the income directly so that the classification of the income for purposes of the allocative rules of Articles 6 to 21 will not be modified by the fact that the income flows-through the partnership.

80. Difficulties may arise, however, in the application of provisions which refer to the activities of the taxpayer, the nature of the taxpayer, the relationship between the taxpayer and another party to a transaction. States may have different views as to what extent the partnership should be ignored in applying such rules. The following subsections describe how the Committee believes that some of the provisions of the Convention should be applied in that respect.

a) Construction activities

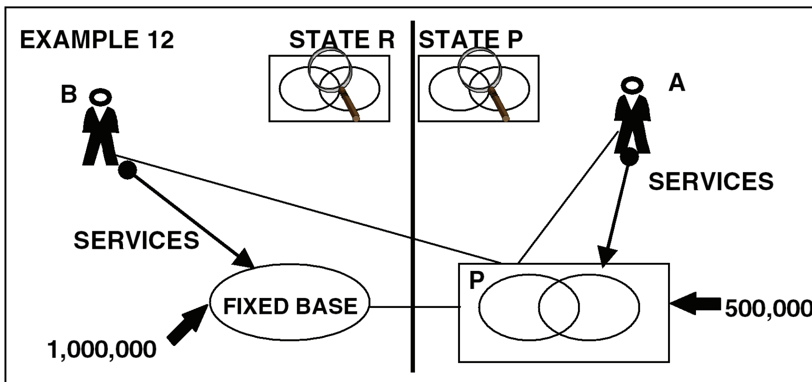
Example 11: *Company A carries on a business of engineering and company B carries on a business of electrical installation. Both companies are residents of State P. They have established a partnership P in State P for the purpose of a contract to design and install the electrical equipment in a nuclear reactor being built in State S. As part of the obligations of P under the contract, employees of Company A will be present on the construction site from 1 January to June 10 and employees of Company B will be there from 10 June to 1 February. When performing their duties, these employees will act as employees of the respective companies, each company acting as agent for the partnership.*



81. In this example, the Committee concluded that the period of time spent by the two partners should be aggregated at the partnership level with the result that the 12 month limit of paragraph 3 of Article 5 is exceeded. The enterprise carried on by the partnership will therefore be considered to have a permanent establishment in State S so that each partner will be considered to have a permanent establishment in State S for purposes of the taxation of their share of the business profits derived by the partnership from State S. This conclusion would not hold good if the relationship between A and B constituted merely a joint venture or consortium rather than a partnership.

b) Income attributable to the fixed base of a partnership

Example 12: *Partnership P, which has been established in State P, has a fixed base in State R. Partner A is a resident of State P and partner B is a resident of State R. They have agreed to divide the profits of the partnership equally. P earns 1,500,000 during the taxable period. 1,000,000 of that amount is attributable to the services performed by B from the State R fixed base. The remaining 500,000 is attributable to services performed by A in State P. Both States treat partnerships as transparent entities.*



82. This example raises the question of the extent to which a transparent partnership should be ignored for purposes of the application of Articles 7 and 14. The Committee agreed that under Article 14, P's fixed base in State R should be considered to be a fixed base of both A and B and that the same is true for a permanent establishment under Article 7.

83. The Committee then considered to what extent the activities of the partnership could be similarly allocated to each of the partners for the purposes of applying paragraph 1 of Article 14, which require that the fixed base be regularly available to a person "for the purpose of performing his activities".

84. Two views were expressed. Under the first view, the reference to "his activities" in paragraph 1 of Article 14 refer to the personal activities of each

partner and the partnership's activities cannot be flowed-through to the partners. According to that view, Article 14 would not allow State R to tax partner A on his share of the income attributable to the fixed base (500,000) since the fixed base was not regularly available to A for the purposes of his own personal activities.

85. The majority, however, agreed with the different view that the activities of the partnership should be allocated to the partners to the same extent that the fixed base of the partnership is attributed to each of them. Applying this approach to the above example, State R would be allowed, as a source State, to tax partners A and partner B on their respective share of the income attributable to the fixed base located therein. State R will also be allowed, as the residence State, to tax partner B's share of any other partnership income. Similarly, State P will be allowed, as a source State, to tax all the partnership's income attributable to the fixed base of the partnership that is located in that State.

86. The Committee realised, however, that cases in the real world are rarely as simple as this example. The partnership agreement may specifically allocate the income from various States to particular partners. Entities that may be considered as partnerships for some purposes may not be partnerships for tax purposes; many international partnerships grant considerable autonomy, both managerial and financial, to their in-country subsidiary organisations. Both taxpayers and tax authorities strive to avoid administratively unmanageable results.

87. The Committee decided that these issues would more appropriately be dealt with in the context of its work on issues related to Article 14. It noted, however, that there should not be differences in result whether Article 7 or 14 applied and that a different conclusion would give rise to difficulties.

c) Determination of "employer" for purposes of Article 15

88. During its discussion of whether partnerships qualify as residents for purposes of tax conventions, the Committee also examined a related issue arising from the reference to the concept of resident in subparagraph 2*b*) of Article 15. Paragraph 2 of Article 15 exempts employment income earned by a resident of a Contracting State in the other State from tax by that other State if a number of conditions apply. One such condition is that the employer must not be a resident of the state in which the employment income is earned. The application of this rule may be problematic when the employer is a partnership.

89. As discussed above, a partnership that is treated as a transparent entity by a Contracting State does not qualify as a resident of that State under Article 4. While it is clear that a partnership that is treated as a transparent

entity could qualify as an "employer" (especially under the domestic law definitions of the term in some countries, *e.g.* where an employer is defined as a person liable for a wage tax), the application of the condition imposed by subparagraph 2*b*) of Article 15 at the level of the partnership regardless of the situation of the partners would render the condition totally meaningless because the partnership cannot possibly qualify as a resident by virtue of its transparent status.

90. The Committee examined this result in the context of Article 15 and in light of the object and purpose of subparagraphs 2*b*) and *c*) of that Article. In its view, the conditions imposed by these subparagraphs aim at avoiding the source taxation of short-term employments to the extent that the employment income is not allowed as a deductible expense in the State of source because the employer is not taxable in that State since he is not resident nor has a permanent establishment therein. These subparagraphs can also be justified by the fact that imposing source deduction requirements with respect to short-term employments in a given State may be considered to be constitute an excessive administrative burden where the employer neither resides nor has a permanent establishment in that State.[4]

91. On that basis, the Committee concluded that in order to achieve a meaningful interpretation that would accord with the context and the object of paragraph 2 of Article 15, subparagraph 2*b*) should, in the case of partnerships treated as transparent entities, be considered to refer to the partners of such a partnership. Thus, the Committee favours an interpretation where the concepts of "employer" and "resident", as found in subparagraph 2*b*), are applied at the level of the partners rather than at the level of the partnership. This approach is fully consistent with that put forward in paragraphs 81 and 85 above, under which certain provisions of tax conventions must be applied at the partners' level rather than at that of the partnership in order to avoid absurd or unreasonable results.

92. The Committee realised that this interpretation would create difficulties where the partners resided in different States. Such difficulties, however, could be addressed through the mutual agreement procedure by reference, for example, to the State in which the partners who own the majority of the interests in the partnership reside (*i.e.* the State in which the greatest part of the deduction will be claimed).

III. APPLICATION OF TAX CONVENTIONS BY THE STATE OF RESIDENCE

93. Where partnerships are involved, the application of tax conventions by the State of residence also raise difficulties, primarily with respect to the

application of Article 23 on Elimination of Double Taxation. This Chapter examines some of these difficulties. Section III.1 focuses on the particular problem of conflicts of qualification while Section III.2 focuses on other problems that conflicts of income allocation may create for the State of residence.

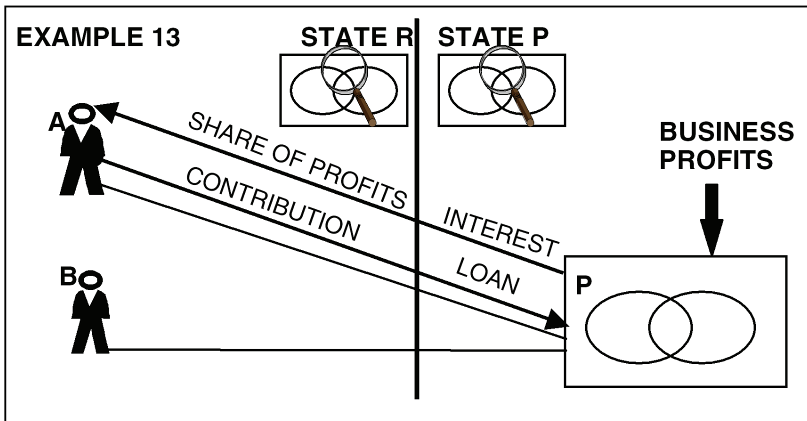
III.1 Conflicts of qualification

a) Description of the problem

94. The Committee has found that a number of difficulties relating to the application of tax conventions to partnerships fall in the broader category of so-called "conflicts of qualification", where the residence and source States apply different articles of the Convention on the basis of differences in their domestic law. Example 13 below illustrates such a conflict.

95. Subsection *b*) presents the conclusions reached by the Committee. Subsection *c*) discusses various cases of conflicts of qualification involving partnerships on the basis of these conclusions, presenting the answer to example 13 in paragraph 119.

Example 13: *Partner A makes a loan to partnership P, which has been established in State P where it carries on a business through a permanent establishment. P pays interest to A. State P recognizes loans between partners and partnerships; under its domestic legislation State P allows P a tax deduction for the interest. State R does not recognize loans between partners and partnerships under its domestic law. Both States treat partnerships as transparent entities and apply Article 7 to the income of P, but State P applies Article 11 to the interest payment and State R does not.*



96. In this example, while partner A is clearly entitled to the benefits of the R-P Convention, there is disagreement between States P and R as to which provisions of the Convention are applicable. State P, being the State of source

of the income, applies its domestic laws for the purposes of taxing the income of and from the partnership. It accordingly determines that partner A receives interest from the partnership and that Article 11 of the Convention applies to restrict to 10% the tax that it can impose on the interest. Under the domestic law of State R, there has been no loan and consequently A has no interest income. State R, however, will consider that the payment from P to A is a distribution of A's share of the business profits of the partnership which has been taxed upon realisation under Article 7.

97. The position of State P is in accordance with the provisions of the Convention. Pursuant to paragraph 2 of Article 3, State P has interpreted the word "debt-claims of every kind", which are found in paragraph 3 of Article 11, in accordance with its domestic law and has therefore concluded that a loan by a partner qualifies as a debt-claim on which interest may be paid. It has applied Article 11 of the Convention accordingly.

98. The consequences of the position taken by State P must, however, be examined in relation to the taxation of partner A in State R. One must distinguish, in that respect, the case where State R eliminates double taxation through the exemption method from that where it applies the credit method.

(i) State R uses the exemption method

99. Under the domestic law of State R, there is no debt-claim between partner A and the partnership and A therefore does not derive interest from State P. If State R follows that position when considering its obligation to eliminate double taxation under Article 23 A, that could lead it to consider that the payment made to partner A is a distribution of the partnership's business profits which is attributable to a permanent establishment situated in State P which constitutes income that must be exempted under paragraph 1 of Article 23 A. To the extent that State P would have interpreted the Convention as obliging it to limit its tax to 10% of the gross amount of the payment, the result would be partial non-taxation (it would be total non-taxation if Article 11 of the R-P Convention did not provide for any source taxation of interest).

100. It must be noted that, regardless of the Convention, State R may still be obliged to exempt the income under its domestic tax rules related to the elimination of double taxation as these rules may require an other approach to be followed. This, however, would be a problem that could only be solved through an amendment to State R's domestic tax laws.

(ii) State R uses the credit method

101. Under the domestic law of State R, there is no debt-claim between partner A and the partnership and A therefore does not derive interest from

State P. Even if State R follows that position when considering its obligation to eliminate double taxation under Article 23 B, it should still tax any share of the partnership's income attributed to A so that non-taxation will be avoided.

b) Analysis of the application of tax conventions in cases of conflicts of qualification

102. The Committee agreed that, in addressing conflicts of qualification problems faced by the State of residence, a useful starting point is the recognition of the principle that the domestic law of the State applying its tax governs all matters regarding how and in the hands of whom an item of income is taxed. The effect of tax conventions can only be to limit or eliminate the taxing rights of the Contracting States. In the case of the source State, the right to tax items of income is limited by provisions based on Articles 6 through 21 of the Model Tax Convention. In the case of the residence State, while provisions based on Articles such as 8 and 19 might be relevant, the primary restriction would arise from the provisions of the Article on Elimination of Double Taxation (Article 23 in the Model Tax Convention), by which the residence State agrees to either exempt income that the source State may tax under the Convention or to give a credit for the tax levied by the source State on that item of income.

103. When taxing an item of income, the source State therefore applies its domestic law, subject to the restrictions and limitations imposed on it by the provisions of its tax conventions. The way that the State of residence qualifies an item of income for treaty purposes has no relevance on how and in the hands of whom the State of source taxes that item of income. The reverse, however, is not true. The way the State of residence eliminates double taxation will depend, to some extent, on how the Convention has been applied by the State of source.

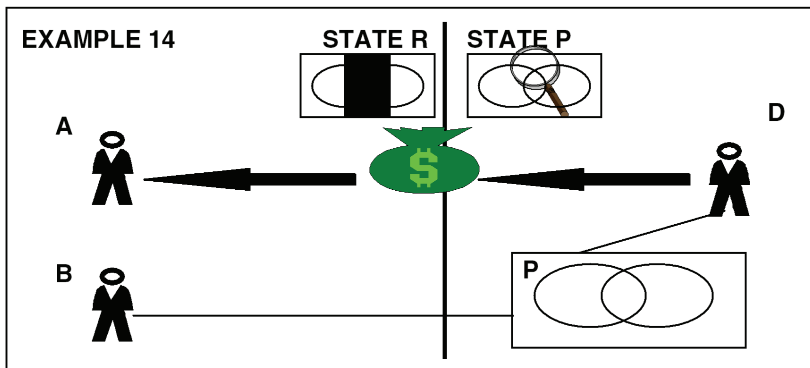
104. The wording of Article 23 of the OECD Model Tax Convention is crucial in that respect. That article requires that relief be granted, either through the exemption or credit system, where an item of income may be taxed "in accordance with the provisions of the Convention". Thus, the State of residence has a treaty obligation to apply the exemption or credit method vis-à-vis any item of income where the tax convention authorizes taxation of that item of income by the State of source.

105. The meaning of the phrase "in accordance with the provisions of this Convention, may be taxed" needs to be clarified in that respect. Where, due to differences in the domestic law between the State of source and the State of residence, the former applies, with respect to a particular item of income, provisions of the Convention that are different from those that the State of residence would have applied to the same item of income, the income is still

being taxed in accordance with the provisions of the Convention, in this case as interpreted by the State of source. In such a case, therefore, Article 23 requires that relief from double taxation be granted by the State of residence notwithstanding the conflict of qualification resulting from these differences in domestic law.

106. It may be useful to consider the following example to examine the results of that approach.

Example 14: *Partner A, a resident of State R, sells his interest in P to D, a resident of State P, for an amount that exceeds A's adjusted basis in the interest. Under State R's domestic law, State R treats P as a company and would regard the gain as a capital gain of* aresident of State R. *Under State P's domestic law, State P treats P as fiscally transparent and would regard the gain as attributable to a State P permanent establishment.*



R (15)

107. In this example, State P therefore considers that the alienation of the interest in the partnership is, for the purposes of its Convention with State R, an alienation by the partner of the underlying assets of the business carried on by the partnership, which may be taxed by State P according to paragraph 1 or 2 of Article 13. State R, as it treats the partnership as a corporate entity, considers that the alienation of the interest in the partnership is akin to the alienation of a share in a company, which could not be taxed by State P by reason of paragraph 4 of Article 13. In such a case, the conflict of qualification results exclusively from the different treatment of partnerships in the domestic laws of the two States and State P must be considered by State R to have taxed the gain from the alienation "in accordance with the provisions of the Convention" for purposes of the application of Article 23. State R must therefore grant an exemption or give a credit pursuant to Article 23 of the Model Tax Convention irrespective of the fact that, under its own domestic law, it treats the alienation gain as income from the disposition of shares in a corporate entity and that, if State's P qualification of the income were

consistent with that of State R, State R would not have to give relief under Article 23. No double taxation will therefore arise in such a case.

108. This does not mean that the wording of Article 23 requires the State of residence to eliminate double taxation in all cases where the State of source has imposed its tax by applying to an item of income a provision of the Convention that is different from that which the State of residence considers to be applicable. For instance, in the example above, if, for purposes of applying paragraph 2 of Article 13, State P considers that the partnership carried on business through a fixed place of business but State R argues that paragraph 4 applies because the partnership did not have a fixed place of business in State P, there is a legitimate dispute as to whether State P has taxed the income in accordance with the provisions of the Convention. The same may be said if State P, when applying paragraph 2 of Article 13, has interpreted the phrase "forming part of the business property" so as to include certain assets which would not fall within the meaning of that phrase according to the interpretation given to it by State R. Such conflicts resulting from different interpretation of facts or different interpretation of the provisions of the Convention must be distinguished from the conflicts of qualification described in the above paragraph where the divergence is based not on different interpretations of the provisions of the Convention, but on different provisions of domestic law. In the former case, the State of residence can argue that the State of source has not imposed its tax in accordance with the provisions of the Convention if it has applied its tax based on what the State of residence considers to be a wrong interpretation of the facts or a wrong interpretation of the Convention. States should use the provisions of Article 25 (Mutual Agreement Procedure), and in particular paragraph 3 thereof, in order to resolve this type of conflict when the difference in approaches would otherwise result in unrelieved double taxation.

109. In other situations, however, the phrase "in accordance with the provisions of this Convention, may be taxed" needs to be interpreted in relation to possible cases of double non-taxation involving residence States that follow the exemption method. Where the State of source considers that the provisions of the Convention preclude it from taxing an item of income which it would otherwise have taxed, the State of residence should, for purposes of applying paragraph 1 of Article 23 A, consider that the item of income may not be taxed by the State of source in accordance with the provisions of the Convention, even though the State of residence would have applied the Convention differently so as to tax that income if it had been the State of source. Thus the State of residence is not required by paragraph 1 to exempt the item of income, a result which is consistent with the basic function of Article 23 which is to eliminate double taxation.

110. This situation may be illustrated by reference to the facts of the above example. A business is carried on through a fixed place of business in State P by a partnership established in that State and a partner, resident in State R, alienates his interest in that partnership. Changing the facts of the example, however, it is now assumed that State P treats the partnership as a taxable entity whereas State R treats it as fiscally transparent; it is further assumed that State R is an exemption State. State P, as it treats the partnership as a corporate entity, considers that the alienation of the interest in the partnership is akin to the alienation of a share in a company, which it cannot tax by reason of paragraph 4 of Article 13. State R, on the other hand, considers that the alienation of the interest in the partnership should have been taxable by State P as an alienation by the partner of the underlying assets of the business carried on by the partnership to which paragraph 1 or 2 of Article 13 would have been applicable. In determining whether it has the obligation to exempt the income under paragraph 1 of Article 23 A, State R should nonetheless consider that, given the way that the provisions of the Convention apply in relation to the domestic law of State P, that State may not tax the income in accordance with the provisions of the Convention; State R is thus under no obligation to exempt the income.

111. Such cases should not be confused with cases where the provisions of a Convention grant to the source State the right to tax an item of income but that item of income is not taxed under the domestic law of the State of source. In such cases, the State of residence must still exempt that item of income under the provisions of paragraph 1 of Article 23 A (*cf*. paragraph 34 of the Commentary on Article 23).

112. Other cases that need to be distinguished are those where the double non-taxation results from disagreements between the State of residence and the State of source on the interpretation of the provisions of the Convention. In such cases, the State of residence does not agree that, in relation to the domestic law of the State of source, that State is precluded from taxing the item of income. The State of residence is therefore arguing that, to the extent that its interpretation of the Convention is correct, it has to grant exemption. Conversely, the source State is arguing that, if its interpretation of the Convention is the correct one, it cannot tax the income and the residence State should therefore not grant exemption. A similar problem could arise in the case of different interpretations of facts.

113. The Committee decided that the best way of addressing such cases of double non-taxation would be through a provision, to be added to Article 23 A, that would provide that the residence State does not have to grant exemption in these cases. Such a provision would deal with cases of double non-taxation resulting from different interpretations of the provisions of the Convention or

of the facts. The Committee therefore decided that the following paragraph 4 be added to Article 23 A of the Model Tax Convention:

> 4. The provisions of paragraph 1 shall not apply to income derived or capital owned by a resident of a Contracting State where the other Contracting State applies the provisions of this Convention to exempt such income or capital from tax or applies the provisions of paragraph 2 of Article 10 or 11 to such income.

114. This proposed provision would only apply to the extent that the State of source has applied the provisions of the Convention to exempt an item of income or capital or has applied the provisions of paragraph 2 of Article 10 or 11 to an item of income. The paragraph would therefore not apply where the State of source considers that it may tax an item of income or capital in accordance with the provisions of the Convention but where no tax is actually payable on such income or capital under the provisions of the domestic laws of the State of source. Similarly, where the source and residence States disagree not only with respect to the qualification of the income but also with respect to the amount of such income, paragraph 4 applies only to that part of the income that the State of source exempts from tax through the application of the Convention or to which that State applies paragraph 2 of Article 10 or 11.

115. The preceding comments concern the position of the residence State where the wording of the provisions on elimination of double taxation in the relevant bilateral Convention is similar to that of Article 23 of the Model Tax Convention. Where, however, the wording is different from that used in the Model Tax Convention, the result might also be different.

116. One variation that is often found in bilateral Convention is to begin the Article on elimination of double taxation by the words "[d]ouble taxation shall be avoided as follows: [...]". Where such wording is used, the conclusions presented in the preceding paragraphs would be reinforced since these words make it clear that the Article is intended to apply only where there is double taxation and the obligation imposed on the Contracting States to avoid double taxation will best be satisfied by adopting the approach described in this section.

117. In some Conventions, the Article on elimination of double taxation includes an explicit reference to internal law, *e.g.* requiring a credit for foreign taxes to be granted subject to the provisions of the domestic law regarding the crediting against domestic tax of tax payable in the other State but without affecting the general principle provided in the article. While the effect of these provisions has to be determined on the basis of their precise wording, such wording, which provides that the reference to domestic law should not affect the principle of the treaty article, will generally allow the application of the conclusions of the preceding paragraphs. In some Conventions, however, the reference to domestic law is not so limited, provided that any inconsistency

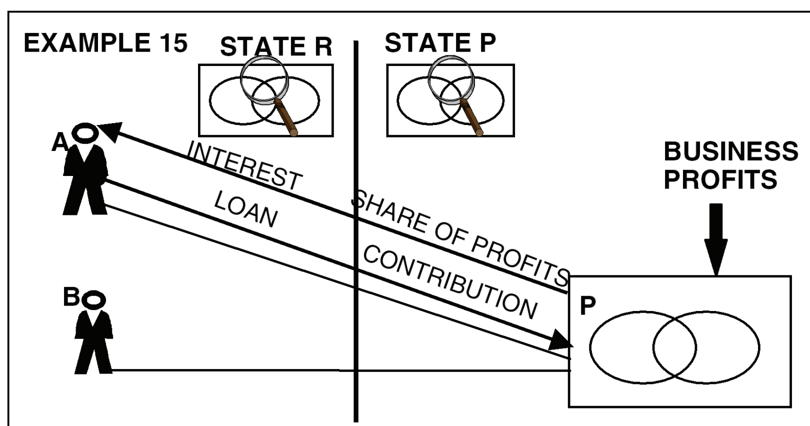
between the domestic law and the treaty rules existed at the time of signature of the Convention. To avoid confusion, Contracting States may wish to make clear the extent to which domestic law will control in situations existing at the time of entry into force of the Convention where the application of the domestic provision could be said to be inconsistent with the "general principle" of achieving double tax relief.

c) Cases of conflicts of qualification involving partnerships

118. The following examines how the general principles developed in the preceding subsection apply in some cases of conflicts of qualification involving partnerships.

119. Starting with example 13 (the facts of that example appear in subsection *a*)), it should be concluded that in that example, the partial non-taxation referred to in paragraph 99 above will be avoided since State R will not be required to exempt what State P considers as interest since it may be said that State P may, under its domestic law, tax that part of the income of the partnership under paragraph 2 of Article 11. State R will therefore apply the credit method in that case, either under paragraph 2 of Article 23 A (exemption method) or under paragraph 1 of Article 23 B (credit method).

Example 15: *The facts are the same as in example 13 except that the treatment of the loan in States P and R is reversed. Partner A makes a loan to partnership P, which has been established in State P where it carries on a business through a permanent establishment. P pays interest to A. State R recognizes loans between partners and partnerships but State P does not. Both States treat partnerships as transparent entities and apply Article 7 to the income of P, but State R considers that Article 11 should apply to the payment made to partner A.*



120. This example is a mirror image of the conflict of qualification presented in example 13. State P, as the State of source of the income, determines that

the payment is a distribution of partner A's share of the partnership business profits and that Article 7 of the Convention applies to allow it to tax that share without restriction. State R, however, considers that the payment from P to A is a payment of interest subject to the rules of Article 11.

121. Again, the position of State P is in accordance with the provisions of the Convention. Pursuant to paragraph 2 of Article 3, State P has interpreted the words "debt-claims of every kind", which are found in paragraph 3 of Article 11, in accordance with its domestic law and has concluded that the financial contribution made by partner A did not qualify as a debt-claim for purposes of determining whether the payment was interest.

122. As Articles 23 A and 23 B both provide for the credit method to be applied in relation to interest, it may be argued that the consequences of that position for State R will be the same whether that State eliminates double taxation predominantly through the exemption method or through the credit method. Under the domestic law of State R, there is a debt-claim and partner A derives interest from State P. If State R follows that position when considering its obligation to eliminate double taxation under Articles 23 A or 23 B, that could lead it to consider that the payment made to partner A is interest that it may tax, subject to giving a credit for any State P tax levied in accordance with paragraph 2 of Article 11. If the Convention does not allow for source taxation of interest, the result of that approach will be double taxation. If the Convention follows Article 11 of the Model Tax Convention, the application of paragraph 2 of Articles 23 A or of paragraph 1 of Article 23 B under that approach will likely result in some double taxation to the extent that State R may only give credit for the part of the State P tax that it considers to have been imposed in accordance with Article 11, *i.e.* 10% of the payment of the interest.

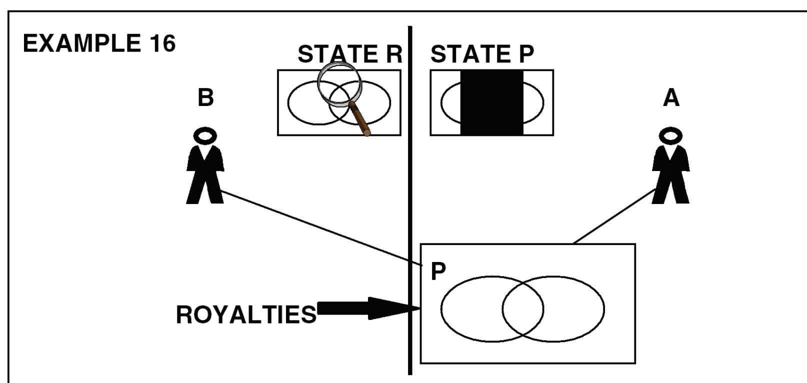
123. On the basis of the principles developed in subsection *b*), however, that result will be avoided since State R will be obliged either to exempt what it considers to be interest (if it applies the exemption method) or to give a credit for the full amount of tax levied by State P on that item of income (if it applies the credit method). This is because the tax which State P has levied under Article 7 has been levied in accordance with the provisions of Article 7 of the Convention, taking into account the qualification of the income in light of State P's domestic tax law.

III.2 Problems arising from conflicts of income allocation

124. As discussed in section II, conflicts of income allocation may result from the fact that two Contracting States classify the same entity differently so that one treats it as a partnership and the other does not or from the fact that one State taxes partnerships as taxable entities while the other treats them as

transparent entities for tax purposes. Such conflicts, where the income is taxed by the two States in the hands of different taxpayers, create particular problems for the State of residence. These problems are discussed under the following examples.

Example 16: *P is a partnership established in State P. Partner B is a resident of State R while partner A is a resident of State P. State P treats the partnership as a taxable entity while State R treats it as a transparent entity. P derives royalty income from State R that is not attributable to a permanent establishment in State R. P has an office in State P and may therefore be considered to have a permanent establishment in State P.*



125. In that example, P qualifies as a resident of State P as it is a person "liable to tax" therein according to the laws of State P. Under Article 12 of the P-R treaty, it is clear that State R cannot tax the partnership on the royalty. State R, however, would like to tax partner B, a resident, on his share of the income of the partnership.

126. Some delegates took the position that the R-P Convention prevents State R from taxing in that situation. On the basis of paragraph 1 of Article 12, which provides that royalties arising in State R and paid to a resident of State P are taxable only in State P if the resident is the beneficial owner thereof, they argued that because the partnership qualifies as a resident of State P and is the beneficial owner of the royalties, the conditions of the paragraph are met and the royalties may only be taxed in State P. The delegates who adopted that interpretation therefore concluded that unless the case fell under the application of CFC rules or the Convention included a special provision allowing State R to tax its residents in such circumstances (*e.g.* a specific provision applicable to partnerships or a so-called "saving clause" such as is found in Conventions concluded by the United States), the Convention would prevent State R from taxing partner B on his share of the royalties.

127. The majority, however, disagreed with that position. When taxing partner B, State R is taxing its own resident on income arising in its territory. Article 12 of the Convention does not affect taxation that is based on residence but only taxation that is based on source. When applying the Convention, State R may indeed consider, based on the principles developed in previous examples, that partner B may be considered to have received payment of his share of the royalties for the purposes of taxation in that State so that the limitation of Article 12 does not apply since that Article is only applicable where royalties arising in one State have been paid to a resident of the other State.

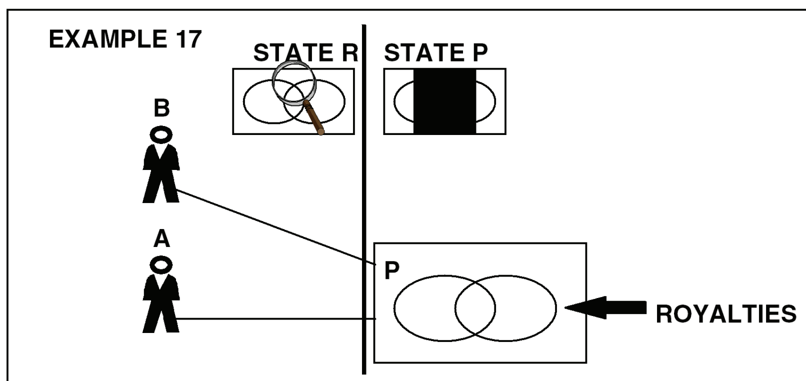
128. The Committee therefore decided that the Commentary on Article 1 be amended by adding the following paragraph thereto:

> Where a partnership is treated as a resident of a Contracting State, the provisions of the Convention that restrict the other Contracting State's right to tax the partnership on its income do not apply to restrict that other State's right to tax the partners who are its own residents on their share of the income of the partnership. Some states may wish to include in their conventions a provision that expressly confirms a Contracting State's right to tax resident partners on their share of the income of a partnership that is treated as a resident of the other State.

129. Since State R's right to tax partner B on his share of the income of the partnership derives from the partner's residence in that State, it follows that State R must also give the benefits of Article 23 to partner B. The fact that the partnership has a permanent establishment in State P is not relevant in that respect since, as discussed in subsection *b*), the tax levied by State P will still have been levied in accordance with the provisions of the Convention since State P is allowed to tax partnership P as its resident. The application of Article 23 by State R may, however, raise some difficulties because State P will levy its tax on the partnership rather than on the partners and because that tax may be levied both when the income is realized and when it is distributed (*i.e.* through a withholding tax on the distribution which State P may treat as a dividend). These difficulties are examined below in relation to example 18.

Example 17: *P is a partnership established in State P. A and B are P's partners who reside in State R. State P treats P as a taxable entity while State R treats it as a*

transparent entity. P derives royalty income from State P that is not attributable to a permanent establishment in that state.



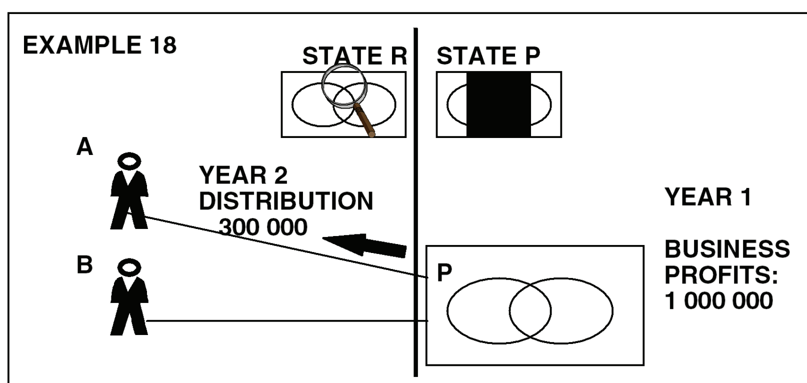
130. This example addresses a factual situation similar to that described in the preceding example but from the perspective of the State of residence of the partnership, *i.e.* State P. In this example, State P would, under its domestic law, impose tax on the royalties in the hands of the partnership. From its perspective, P is a resident taxpayer and as such liable to tax on its income arising in State P. Thus, Article 12 of the Convention would not apply since the royalties arise in State P and are paid to a resident of State P. However, because State R allocates the income to partners A and B, they are also liable to tax on the royalties in State R as residents. There would thus be double taxation on the same item of income because of the differing allocation rules in this situation.

131. The majority was of the view that, despite the general principles discussed in Section II.5 which would require the source State to take into consideration the treatment of the income in the State of the residence of the partners, in this situation State P would not be limited in its taxing rights by the P-R Convention. In its view, the situation involves a purely domestic matter from the perspective of State P; it is simply taxing the domestic source income of a resident taxpayer and nothing in the Convention can limit that right. The fact that double taxation results because of the differing income allocations of States R and P is not a reason to limit its right to tax its residents.

132. Some delegates, however, would continue to follow the principle that State P, in applying the Convention, should take into account the fact that, under the allocation of income rules in State R, the income would be liable to tax in the hands of A and B. Their position would be that State P is obliged to relieve the potential resulting double taxation by applying Article 12 to exempt the income in the hands of the partners, thus leaving the exclusive taxing right with State R.

133. Where P continues to tax the income in the hands of P, the possible application of Article 23 is discussed in Section III.1.

Example 18: *In Year 1, P, which is established and has a permanent establishment in State P, earns profits of 1 million. In Year 2, P distributes to A, a resident of State R, his share in the profits earned in Year 1 (300,000). Under State P's domestic law, P is a company, and the profits would be taxed in Year 1 at 40% (400,000). In year 2, a further withholding tax (30,000) on the distribution to A would be imposed (by treating it as a dividend). Under State R's domestic law, P is fiscally transparent, and State R would tax A in Year 1 on A's share in P's profits (500,000). State R would treat the distribution in year 2 as having no tax effect.*



134. In this example, the conflict in income allocation that results from the different treatment of partnerships in States P and R raises the following various difficulties with respect to the elimination of double taxation by State R:

- the fact that State P taxes two different events (the earning of the profits and their distribution) while State R only taxes one event (the earning of the profits);
- the timing mismatch that results from the fact that State P taxes the distribution in year 2 but State R imposes its tax in year 1;
- the fact that the State P tax which is levied when the profits are earned is paid by the partnership while the State R tax is levied on the partners.

135. The first difficulty relates to whether State R should provide credit for the tax levied by State P upon the distribution. This is an issue that concerns equally States applying the exemption method and States applying the credit method. If State R applies the exemption method, it must refrain from taxing the partnership's business profits derived from State P in year 1 (it is, of course, entitled to take the excluded income into account in determining the rate of tax on A's remaining income pursuant to paragraph 3 of Article 23 A); if it is a credit State, it must give credit for State P's tax levied on these profits in

year 1. In both cases, however, the Convention theoretically requires that it should provide a credit for State P's tax levied on the distribution against its tax on such a distribution (paragraph 2 of Article 23 A and paragraph 1 of Article 23 B).

136. Since, however, State R does not tax the distribution, there is no tax levied by State R against which to credit State P's tax levied upon the distribution. While the Convention would allow State R to tax the profit distribution made in year 2, such taxation would be inconsistent with State R's treatment of partnership and is therefore not allowed by its domestic law. Under that law, the income may be taxed (subject to any relief from double taxation) only in the year it was earned, *i.e.* year 1. The manner in which taxation rights allowed by a treaty are exercised is, of course, a matter of domestic law.

137. A clear distinction must be made between the generation of profits and the distribution of those profits. State R, if it is an exemption State, has to exempt from tax the generation of profits in year 1 and therefore is not permitted under the Convention to tax the profits when earned on the basis that Article 10 would allow them to be taxed when distributed. Similarly, however, State R (if it is a credit State) should not be expected to credit the tax levied by State P upon distribution against its own tax levied upon generation.

138. Once it is agreed that State R does not levy tax on the distribution, the second difficulty, *i.e.* the timing mismatch, is no longer relevant. While timing mismatches frequently create problems for foreign tax credit purposes, which leads States to adopt rules allowing for the carry-back or carry-forward of foreign tax credits, the issue does not arise in this example since there is no double taxation of the distribution.

139. The third difficulty concerns only States that apply the credit method and relates to the fact that both States impose tax upon the same income, but on different taxpayers. The issue is therefore whether State R, which taxes partner A on his share in the partnership profits, is obliged, under the Convention, to give credit for the source tax that is levied in State P on partnership P, which State P treats as a separate taxable entity. The answer to that question must be affirmative. To the extent that State R flows-through the income of the partnership to the partners for the purpose of taxing them, it should be consistent and flow-through the tax paid by the partnership for the purposes of eliminating double taxation arising from its taxation of the partners. In other words, if the corporate status given to the partnership by State P is ignored for purposes of taxing the share in the profits, it should likewise be ignored for purposes of giving access to the foreign tax credit.

Notes and References

1. Since partnerships qualify as "persons", they should be entitled, under paragraph 1 of Article 25, to have recourse to the mutual agreement procedure. Where, however, a partnership does not qualify as a "resident of a Contracting State" (see below), paragraph 1 of Article 25 does not indicate to which competent authority it should present its case. The Committee believes that this procedural hurdle should not prevent the partnership from presenting its case to the competent authority of the State of residence of its partners since the same result could be obtained, albeit in a more cumbersome way, if each of the partners presented the case himself.

ANNEX I

PROPOSED CHANGES TO THE OECD MODEL TAX CONVENTION

The following are the changes to the Model Tax Convention resulting from the report (changes to the existing text of the Commentary are indicated by ***bold italics*** and ~~strikethrough~~):

Articles of the Model

1. Add the following paragraph 4 to Article 23 A of the Model Tax Convention:

> ***4. The provisions of paragraph 1 shall not apply to income derived or capital owned by a resident of a Contracting State where the other Contracting State applies the provisions of this Convention to exempt such income or capital from tax or applies the provisions of paragraph 2 of Article 10 or 11 to such income.***

Commentary

2. Delete paragraphs 2 to 6 of the Commentary on Article 1 and replace them by the following:

> ***2. Domestic laws differ in the treatment of partnerships. These differences create various difficulties when applying tax Conventions in relation to partnerships. These difficulties are analysed in the report by the Committee on Fiscal Affairs entitled The application of the OECD Model Tax Convention to Partnerships, the conclusions of which have been incorporated below and in the Commentary on various other provisions of the Model Tax Convention.***
>
> 3. [FROM PARA. 2] ***As discussed in that report, a main source of difficulties is*** the fact that some countries treat partnerships as taxable units (sometimes even as companies) whereas other countries ***adopt what may be referred to as the fiscally transparent approach, under which the partnership is ignored for tax purposes*** and the individual partners ***are taxed*** on their respective share of the partnership's income.
>
> 4. ***A first difficulty is the extent to which a partnership is entitled as such to the benefits of the provisions of the Convention***. ***Under Article 1, only persons who are residents of the Contracting States are entitled to the benefits of the tax Convention entered into by these States. While paragraph 2 of the Commentary on Article 3 explains why a partnership constitutes a person, a partnership does not necessarily qualify as a resident of a Contracting State under Article 4.***

MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

5. [FROM PARA. 3] Where a partnership is treated as a company or taxed in the same way, it ~~may reasonably be argued that the partnership~~ is a resident of the Contracting State ~~taxing~~***that taxes*** the partnership on the grounds mentioned in paragraph 1 of Article 4 and, therefore, ~~falling under the scope of the Convention,~~**it** is entitled to the benefits of the Convention. ~~In the other instances mentioned in paragraph 2 above, the application of the Convention to the partnership as such might be refused, at least if no special rule covering partnerships is provided for in the Convention~~. ***Where, however, a partnership is treated as fiscally transparent in a State, the partnership is not "liable to tax" in that State within the meaning of paragraph 1 of Article 4, and so cannot be a resident thereof for purposes of the Convention. In such a case, the application of the Convention to the partnership as such would be refused, unless a special rule covering partnerships were provided for in the Convention. Where the application of the Convention is so refused, the partners should be entitled, with respect to their share of the income of the partnership, to the benefits provided by the Conventions entered into by the States of which they are residents to the extent that the partnership's income is allocated to them for the purposes of taxation in their State of residence (cf. paragraph 8.2 of the Commentary on Article 4).***

6. The relationship between the partnership's entitlement to the benefits of a tax Convention and that of the partners raises other questions.

6.1 One issue is the effect that the application of the provisions of the Convention to a partnership can have on the taxation of the partners. Where a partnership is treated as a resident of a Contracting State, the provisions of the Convention that restrict the other Contracting State's right to tax the partnership on its income do not apply to restrict that other State's right to tax the partners who are its own residents on their share of the income of the partnership. Some states may wish to include in their conventions a provision that expressly confirms a Contracting State's right to tax resident partners on their share of the income of a partnership that is treated as a resident of the other State.

6.2 Another issue is that of the effect of the provisions of the Convention on a Contracting State's right to tax income arising on its territory where the entitlement to the benefits of one, or more than one, Conventions is different for the partners and the partnership. Where, for instance, the State of source treats a domestic partnership as fiscally transparent and therefore taxes the partners on their share of the income of the partnership, a partner that is resident of a State that taxes partnerships as companies would not be able to claim the benefits of the Convention between the two States with respect to the share of the partnership's income that the State of source taxes in his hands since that income, though allocated to the person

claiming the benefits of the Convention under the laws of the State of source, is not similarly allocated for purposes of determining the liability to tax on that item of income in the State of residence of that person.

6.3 The results described in the preceding paragraph should obtain even if, as a matter of the domestic law of the State of source, the partnership would not be regarded as transparent for tax purposes but as a separate taxable entity to which the income would be attributed, provided that the partnership is not actually considered as a resident of the State of source. This conclusion is founded upon the principle that the State of source should take into account, as part of the factual context in which the Convention is to be applied, the way in which an item of income, arising in its jurisdiction, is treated in the jurisdiction of the person claiming the benefits of the Convention as a resident. For States which could not agree with this interpretation of the Article, it would be possible to provide for this result in a special provision which would avoid the resulting potential double taxation where the income of the partnership is differently allocated by the two States.

6.4 Where, as described in paragraphs 6.2, income has "flowed through" a transparent partnership to the partners who are liable to tax on that income in the State of their residence then the income is appropriately viewed as "paid" to the partners since it is to them and not to the partnership that the income is allocated for purposes of determining their tax liability in their State of residence. Hence the partners, in these circumstances, satisfy the condition, imposed in several Articles, that the income concerned is "paid to a resident of the other Contracting State". Similarly the requirement, imposed by some other Articles, that income or gains are 'derived by a resident of the other Contracting State is met in the circumstances described above. This interpretation avoids denying the benefits of tax Conventions to a partnership's income on the basis that neither the partnership, because it is not a resident, nor the partners, because the income is not directly paid to them or derived by them, can claim the benefits of the Convention with respect to that income. Following from the principle discussed in paragraph 6.3, the conditions that the income be paid to, or derived by, a resident should be considered to be satisfied even where, as a matter of the domestic law of the State of s ource, the partnership would not be regarded as transparent for tax purposes, provided that the partnership is not actually considered as a resident of the State of source.

6.5 Partnership cases involving three States pose difficult problems with respect to the determination of entitlement to benefits under Conventions. However, many problems may be solved through the application of the principles described in paragraphs 6.2 to 6.4. Where a partner is a resident

of one State, the partnership is established in another State and the partner shares in partnership income arising in a third State then the partner may claim the benefits of the Convention between his State of residence and the State of source of the income to the extent that the partnership's income is allocated to him for the purposes of taxation in his State of residence. If, in addition, the partnership is taxed as a resident of the State in which it is established then the partnership may itself claim the benefits of the Convention between the State in which it is established and the State of source. In such a case of "double benefits", the State of source may not impose taxation which is inconsistent with the terms of either applicable Convention therefore, where different rates are provided for in the two Conventions, the lower will be applied. However, Contracting States may wish to consider special provisions to deal with the administration of benefits under Conventions in situations such as these, so that the partnership may claim benefits but partners could not present concurrent claims. Such provisions could ensure appropriate and simplified administration of the giving of benefits. No benefits will be available under the Convention between the State in which the partnership is established and the State of source if the partnership is regarded as transparent for tax purposes by the State in which it is established. Similarly no benefits will be available under the Convention between the State of residence of the partner and the State of source if the income of the partnership is not allocated to the partner under the taxation law of the State of residence. If the partnership is regarded as transparent for tax purposes by the State in which it is established and the income of the partnership is not allocated to the partner under the taxation law of the State of residence of the partner, the State of source may tax partnership income allocable to the partner without restriction.

6.6 Differences in how countries apply the fiscally transparent approach may create other difficulties for the application of tax Conventions. Where a State considers that a partnership does not qualify as a resident of a Contracting State because it is not liable to tax and the partners are liable to tax in their State of residence on their share of the partnership's income, it is expected that that State will apply the provisions of the Convention as if the partners had earned the income directly so that the classification of the income for purposes of the allocative rules of Articles 6 to 21 will not be modified by the fact that the income flows-through the partnership. Difficulties may arise, however, in the application of provisions which refer to the activities of the taxpayer, the nature of the taxpayer, the relationship between the taxpayer and another party to a transaction. Some of these difficulties are discussed in paragraphs 19.1 of the Commentary on Article 5 and paragraphs 6.1 and 6.2 of the Commentary on Article 15.

6.7 Finally a number of other difficulties arise where different rules of the Convention are applied by the Contracting States to income derived by a partnership or its partners, depending on the domestic laws of these States or their interpretation of the provisions of the Convention or of the relevant facts. These difficulties relate to the broader issue of conflicts of qualification, which is dealt with in paragraphs 32.1 ff. and 56.1 ff. of the Commentary on Article 23.

3. Delete the last sentence of paragraph 2 of the Commentary on Article 3 and replace it by the following:

Partnerships will also be considered to be "persons" either because they fall within the definition of "company" or, where this is not the case, because they constitute other bodies of persons.

4. Add the following paragraph 10.1 to the Commentary on Article 3:

10.1 The separate mention of partnerships in sub-paragraph 1 f) is not inconsistent with the status of a partnership as a person under sub-paragraph 1 a). Under the domestic laws of some countries, it is possible for an entity to be a "person" but not a "legal person" for tax purposes. The explicit statement is necessary to avoid confusion.

5. Add the following paragraph 8.2 to the Commentary on Article 4:

8.2 Where a State disregards a partnership for tax purposes and treats it as fiscally transparent, taxing the partners on their share of the partnership income, the partnership itself is not liable to tax and may not, therefore, be considered to be a resident of that State. In such a case, since the income of the partnership "flows through" to the partners under the domestic law of that State, the partners are the persons who are liable to tax on that income and are thus the appropriate persons to claim the benefits of the Conventions concluded by the States of which they are residents. This latter result will obtain even if, under the domestic law of the State of source, the income is attributed to a partnership which is treated as a separate taxable entity. For States which could not agree with this interpretation of the Article, it would be possible to provide for this result in a special provision which would avoid the resulting potential double taxation where the income of the partnership is differently allocated by the two States.

6. Add the following paragraph 19.1 to the Commentary on Article 5:

19.1 In the case of fiscally transparent partnerships, the twelve month test is applied at the level of the partnership as concerns its own activities. If the period of time spent on the site by the partners and the employees of the partnership exceeds twelve month, the enterprise carried on by the partnership will therefore be considered to have a permanent establishment. Each partner will thus be considered to have a permanent

establishment for purposes of the taxation of his share of the business profits derived by the partnership regardless of the time spent by himself on the site.

7. Renumber paragraph 7 of the Commentary on Article 15 as paragraph 6 and add the following paragraphs 6.1 and 6.2:

6.1 The application of the second condition in the case of fiscally transparent partnerships present difficulties since such partnerships cannot qualify as a resident of a Contracting State under Article 4 (cf. paragraph 8.2 of the Commentary on Article 4). While it is clear that such a partnership could qualify as an "employer" (especially under the domestic law definitions of the term in some countries, e.g. where an employer is defined as a person liable for a wage tax), the application of the condition at the level of the partnership regardless of the situation of the partners would therefore render the condition totally meaningless.

6.2 The object and purpose of subparagraphs 2b) and c) of paragraph 2 are to avoid the source taxation of short-term employments to the extent that the employment income is not allowed as a deductible expense in the State of source because the employer is not taxable in that State as he neither is a resident nor has a permanent establishment therein. These subparagraphs can also be justified by the fact that imposing source deduction requirements with respect to short-term employments in a given State may be considered to be constitute an excessive administrative burden where the employer neither resides nor has a permanent establishment in that State. In order to achieve a meaningful interpretation of subparagraph 2b) that would accord with its context and its object, it should therefore be considered that, in the case of fiscally transparent partnerships, that subparagraph applies at the level of the partners. Thus, the concepts of "employer" and "resident", as found in subparagraph 2b), are applied at the level of the partners rather than at the level of a fiscally transparent partnership. This approach is consistent with that under which other provisions of tax Conventions must be applied at the partners' rather than at the partnership's level. While this interpretation could create difficulties where the partners reside in different States, such difficulties could be addressed through the mutual agreement procedure by determining, for example, the State in which the partners who own the majority of the interests in the partnership reside (i.e. the State in which the greatest part of the deduction will be claimed).

8. Add the following heading and paragraphs immediately after paragraph 32 of the Commentary on Article 23:

E. Conflicts of qualification:[1]

32.1 Both Articles 23 A and 23 B require that relief be granted, through the exemption or credit method, as the case may be, where an item of income or capital may be taxed by the State of source in accordance with the provisions of the Convention. Thus, the State of residence has the obligation to apply the exemption or credit method in relation to an item of income or capital where the Convention authorizes taxation of that item by the State of source.

32.2 The interpretation of the phrase "in accordance with the provisions of this Convention, may be taxed", which is used in both Articles, is particularly important when dealing with cases where the State of residence and the State of source classify the same item of income or capital differently for purposes of the provisions of the Convention.

32.3 Different situations need to be considered in that respect. Where, due to differences in the domestic law between the State of source and the State of residence, the former applies, with respect to a particular item of income or capital, provisions of the Convention that are different from those that the State of residence would have applied to the same item of income or capital, the income is still being taxed in accordance with the provisions of the Convention, as interpreted and applied by the State of source. In such a case, therefore, the two Articles require that relief from double taxation be granted by the State of residence notwithstanding the conflict of qualification resulting from these differences in domestic law.

32.4 This point may be illustrated by the following example. A business is carried on through a permanent establishment in State E by a partnership established in that State. A partner, resident in State R, alienates his interest in that partnership. State E treats the partnership as fiscally transparent whereas State R treats it as taxable entity. State E therefore considers that the alienation of the interest in the partnership is, for the purposes of its Convention with State R, an alienation by the partner of the underlying assets of the business carried on by the partnership, which may be taxed by that State in accordance with paragraph 1 or 2 of Article 13. State R, as it treats the partnership as a taxable entity, considers that the alienation of the interest in the partnership is akin to the alienation of a share in a company, which could not be taxed by State E by reason of paragraph 4 of Article 13. In such a case, the conflict of qualification results exclusively from the different treatment of partnerships in the domestic

1 See the diverging opinion by Switzerland in Annex II.

laws of the two States and State E must be considered by State R to have taxed the gain from the alienation "in accordance with the provisions of the Convention" for purposes of the application of Article 23 A or Article 23 B. State R must therefore grant an exemption pursuant to Article 23 A or give a credit pursuant to Article 23 B irrespective of the fact that, under its own domestic law, it treats the alienation gain as income from the disposition of shares in a corporate entity and that, if State E's qualification of the income were consistent with that of State R, State R would not have to give relief under Article 23 A or Article 23 B. No double taxation will therefore arise in such a case.

32.5 Article 23 A and Article 23 B, however, do not require that the State of residence eliminate double taxation in all cases where the State of source has imposed its tax by applying to an item of income a provision of the Convention that is different from that which the State of residence considers to be applicable. For instance, in the example above, if, for purposes of applying paragraph 2 of Article 13, State E considers that the partnership carried on business through a fixed place of business but State R considers that paragraph 4 applies because the partnership did not have a fixed place of business in State E, there is actually a dispute as to whether State E has taxed the income in accordance with the provisions of the Convention. The same may be said if State E, when applying paragraph 2 of Article 13, interprets the phrase "forming part of the business property" so as to include certain assets which would not fall within the meaning of that phrase according to the interpretation given to it by State R. Such conflicts resulting from different interpretation of facts or different interpretation of the provisions of the Convention must be distinguished from the conflicts of qualification described in the above paragraph where the divergence is based not on different interpretations of the provisions of the Convention but on different provisions of domestic law. In the former case, State R can argue that State E has not imposed its tax in accordance with the provisions of the Convention if it has applied its tax based on what State R considers to be a wrong interpretation of the facts or a wrong interpretation of the Convention. States should use the provisions of Article 25 (Mutual Agreement Procedure), and in particular paragraph 3 thereof, in order to resolve this type of conflict in cases that would otherwise result in unrelieved double taxation.

32.6 The phrase "in accordance with the provisions of this Convention, may be taxed" must also be interpreted in relation to possible cases of double non-taxation that can arise under Article 23 A. Where the State of source considers that the provisions of the Convention preclude it from taxing an item of income or capital which it would otherwise have taxed, the State of residence should, for purposes of applying paragraph 1 of

Article 23 A, consider that the item of income may not be taxed by the State of source in accordance with the provisions of the Convention, even though the State of residence would have applied the Convention differently so as to tax that income if it had been in the position of the State of source. Thus the State of residence is not required by paragraph 1 to exempt the item of income, a result which is consistent with the basic function of Article 23 which is to eliminate double taxation.

32.7 This situation may be illustrated by reference to a variation of the example described above. A business is carried on through a fixed place of business in State E by a partnership established in that State and a partner, resident in State R, alienates his interest in that partnership. Changing the facts of the example, however, it is now assumed that State E treats the partnership as a taxable entity whereas State R treats it as fiscally transparent; it is further assumed that State R is a State that applies the exemption method. State E, as it treats the partnership as a corporate entity, considers that the alienation of the interest in the partnership is akin to the alienation of a share in a company, which it cannot tax by reason of paragraph 4 of Article 13. State R, on the other hand, considers that the alienation of the interest in the partnership should have been taxable by State E as an alienation by the partner of the underlying assets of the business carried on by the partnership to which paragraphs 1 or 2 of Article 13 would have been applicable. In determining whether it has the obligation to exempt the income under paragraph 1 of Article 23 A, State R should nonetheless consider that, given the way that the provisions of the Convention apply in conjunction with the domestic law of State E, that State may not tax the income in accordance with the provisions of the Convention. State R is thus under no obligation to exempt the income.

9. Replace paragraphs 34 to 36 of the Commentary on Article 23 by the following:

34. The State of residence must accordingly ***exempt income and capital which may be taxed by the other State in*** accordance ***with the Convention*** whether or not the right to tax is in effect exercised by ***that*** other State. This method is regarded as the most practical one since it relieves the State of residence from undertaking investigations of the actual taxation position in the other State.

34.1 The obligation imposed on the State of residence to exempt a particular item of income or capital depends on whether this item may be taxed by the State of source in accordance with the Convention. Paragraphs 32.1 to 32.7 above discuss how this condition should be interpreted. Where the condition is met, however, the obligation may be considered as absolute, subject to the exceptions of paragraphs 2 and 4 of Article 23 A. Paragraph 2

addresses the case, already mentioned in paragraph 31 above, of items of income which may only be subjected to a limited tax in the State of source. For such items of income, the paragraph provides for the credit method (cf. paragraph 47 below). Paragraph 4 addresses the case of certain conflicts of qualification which would result in double non-taxation as a consequence of the application of the Convention if the State of residence were obliged to give exemption (cf. paragraphs 56.1 to 56.3 below).

35. Occasionally, negotiating States may find it reasonable in certain circumstances***, in order to avoid double non-taxation***, to make an exception to the absolute obligation on the State of residence to give ***exemption in cases where neither paragraph 3 nor 4 would apply***. Such may be the case ***where no tax on specific items of income or capital is provided under the domestic laws of the State of source, or*** tax is not effectively collected owing to special circumstances such as the set-off of losses, a mistake, or the statutory time limit having expired. To avoid ***such*** double non-taxation of specific items of income, Contracting States may agree to amend the relevant Article itself (*cf.* paragraph 9 of the Commentary on Article 15 and paragraph 12 of the Commentary on Article 17; for the converse case where relief in the State of source is subject to actual taxation in the State of residence, *cf.* paragraph 20 of the Commentary on Article 10, paragraph 10 of the Commentary on Article 11, paragraph 6 of the Commentary on Article 12, paragraph 21 of the Commentary on Article 13 and paragraph 3 of the Commentary on Article 21). One might also make an exception to the general rule, in order to achieve a certain reciprocity, where one of the States adopts the exemption method and the other the credit method. Finally, another exception to the general rule may be made where a State wishes to apply to specific items of income the credit method rather than exemption (*cf.* paragraph 31 above).

36. ~~As already mentioned in paragraph 31 above, the exemption method does not apply to such items of income which according to the Convention may be taxed in the State of residence but may also be subjected to a limited tax in the other Contracting State. For such items of income, paragraph 2 of Article 23 A provides for the credit method (*cf.* paragraph 47 below).~~

10. Add the following heading and paragraphs immediately after paragraph 56 of the Commentary on Article 23:

Paragraph 4

56.1 The purpose of this paragraph is to avoid double non taxation as a result of disagreements between the State of residence and the State of source on the facts of a case or on the interpretation of the provisions of the

Convention. The paragraph applies where, on the one hand, the State of source interprets the facts of a case or the provisions of the Convention in such a way that an item of income or capital falls under a provision of the Convention that eliminates its right to tax that item or limits the tax that it can impose while, on the other hand, the State of residence adopts a different interpretation of the facts or of the provisions of the Convention and thus considers that the item may be taxed in the State of source in accordance with the Convention, which, absent this paragraph, would lead to an obligation for the State of residence to give exemption under the provisions of paragraph 1.

56.2 The paragraph only applies to the extent that the State of source has applied the provisions of the Convention to exempt an item of income or capital or has applied the provisions of paragraph 2 of Article 10 or 11 to an item of income. The paragraph would therefore not apply where the State of source considers that it may tax an item of income or capital in accordance with the provisions of the Convention but where no tax is actually payable on such income or capital under the provisions of the domestic laws of the State of source. In such a case, the State of residence must exempt that item of income under the provisions of paragraph 1 because the exemption in the State of source does not result from the application of the provisions of the Convention but, rather, from the domestic law of the State of source (cf. paragraph 34 above). Similarly, where the source and residence States disagree not only with respect to the qualification of the income but also with respect to the amount of such income, paragraph 4 applies only to that part of the income that the State of source exempts from tax through the application of the Convention or to which that State applies paragraph 2 of Article 10 or 11.

56.3 Cases where the paragraph apply must be distinguished from cases where the qualification of an item of income under the domestic law of the State of source interacts with the provisions of the Convention to preclude that State from taxing an item of income or capital in circumstances where the qualification of that item under the domestic law of the State of residence would not have had the same result. In such a case, which is discussed in paragraphs 32.6 and 32.7 above, paragraph 1 does not impose an obligation on the State of residence to give exemption because the item of income may not be taxed in the State of source in accordance with the Convention. Since paragraph 1 does not apply, the provisions of paragraph 4 are not required in such a case to ensure the taxation right of the State of residence.

MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

11. Replace paragraph 59 of the Commentary on Article 23 by the following:

59. ***The obligation imposed by Article 23 B on a State R to give credit for the tax levied in the other State E (or S) on an item of income or capital depends on whether this item may be taxed by the State E (or S) in accordance with the Convention. Paragraphs 32.1 to 32.7 above discuss how this condition should be interpreted***. ~~It is to be noted that Article 23 B applies in a State R only to items of income or capital which, in accordance with the Convention, "may be taxed" in the other State E (or S).~~ Items of income or capital which according to Article 8, to paragraph 3 of Article 13, to sub-paragraph a) of paragraphs 1 and 2 of Article 19 and to paragraph 3 of Article 22, "shall be taxable only" in the other State, are from the outset exempt from tax in State R (*cf.* paragraph 6 above), and the Commentary on Article 23 A applies to such exempted income and capital. As regards progression, reference is made to paragraph 2 of the Article (and paragraph 79 below).

12. Add the following paragraphs 69.1 to 69.3 to the Commentary on Article 23:

69.1 Problems may arise where Contracting States treat entities such as partnerships in a different way. Assume, for example, that the State of source treats a partnership as a company and the State of residence of a partner treats it as fiscally transparent. The State of source may, subject to the applicable provisions of the Convention, tax the partnership on its income when that income is realized and, subject to the limitations of paragraph 2 of Article 10, may also tax the distribution of profits by the partnership to its non-resident partners. The State of residence, however, will only tax the partner on his share of the partnership's income when that income is realized by the partnership.

69.2 The first issue that arises in this case is whether the State of residence, which taxes the partner on his share in the partnership's income, is obliged, under the Convention, to give credit for the tax that is levied in the State of source on the partnership, which that latter State treats as a separate taxable entity. The answer to that question must be affirmative. To the extent that the State of residence flows-through the income of the partnership to the partner for the purpose of taxing him, it must adopt a coherent approach and flow-through to the partner the tax paid by the partnership for the purposes of eliminating double taxation arising from its taxation of the partner. In other words, if the corporate status given to the partnership by the State of source is ignored by the State of residence for purposes of taxing the partner on his share of the income, it should likewise be ignored for purposes of the foreign tax credit.

69.3 A second issue that arises in this case is the extent to which the State of residence must provide credit for the tax levied by the State of source on the distribution, which is not taxed in the State of residence. The answer to that question lies in that last fact. Since the distribution is not taxed in the State of residence, there is simply no tax in the State of residence against which to credit the tax levied by the State of source upon the distribution. A clear distinction must be made between the generation of profits and the distribution of those profits and the State of residence should not be expected to credit the tax levied by the State of source upon the distribution against its own tax levied upon generation (cf. the first sentence of paragraph 64 above).

ANNEX II

RESERVATIONS BY FRANCE, GERMANY, THE NETHERLANDS, PORTUGAL AND SWITZERLAND

France

1. France considers that the criteria mentioned in paragraphs 40 to 42 in order to decide whether a partnership is "liable to tax" or not are not sufficient to take into account situations where a partnership is partly treated as a taxable unit and partly disregarded for tax purposes.

2. For the purposes of French tax law, a partnership would always be regarded as liable to tax, even if in fact taxation is applied not against the partnership as such but on the partners on behalf of the partnership according to the share corresponding to their participation in the partnership.

3. Consequently, France does not share the conclusions of Section II.3*b*).

4. France also disagrees with the conclusions mentioned in paragraph 35 under which, if the application of the Convention to the partnership is refused, the partners would always be entitled to the benefits provided by the Convention entered into by the countries of which they are residents. The opinion of France is that such a solution depends to some extent upon the provisions included in the Convention concluded with the State where the partnership is situated.

5. The implications of the above comments with regard to the introductory examples examined in Section II.4 and Section II.5 are as follows:

A. France considers that it is not appropriate to refer to a single criterion to determine whether a partnership is "liable to tax".

6. The systems which different States use to impose tax on partnerships and their constituent partners are highly complex.

7. It is not sufficient to note that the amount of tax due payable on the partnership income is determined in relation to the personal characteristics of the partners to conclude that the partnership should not itself be considered to be "liable to tax".

8. The use of such reasoning to determine whether the provisions of Conventions are applicable is likely to lead to a situation in which some States are placed in the category of those which apply a fiscally transparent approach to partnerships despite the fact their own domestic legislation considers such entities to be liable to tax.

9. If this line of reasoning were to be pursued further, then despite the fact that under French tax law a partnership is always considered to be liable to tax

France would have to be classified among those States which do not recognise their own partnerships are being "resident" within the meaning of the report.

10. To the extent that it does not recognise itself as a State which treats partnerships as being fiscally transparent, France cannot endorse the conclusions of the Committee with regard to the examples presented in Section II.4.

11. In example 2, for instance, France's opinion, in the event that it were State P in which the partnership was established, is that:

- firstly, the partnership, given that it is liable to tax, is entitled to claim the benefits of the Convention;
- secondly, the applicable Convention is that between S and P and not the one between S and R.

B. France does not share the view that in cases where the application of the Convention is denied to a partnership the members of that partnership may claim the benefits of the Conventions entered into by the States of which they are residents by virtue of the fact that they are liable to tax in those States on their share of the partnership income.

12. Even when the partnership is established in a State which applies a fiscally transparent approach, the fact that the partnership is a legal person precludes the view that income simply "flows through" this entity to the partners.

13. Since a partnership constitutes a separate legal entity, it cannot be ignored for tax purposes.

14. Although treating partnerships as being liable to tax, France therefore cannot agree with the conclusions reached by the Committee with regard to the examples reviewed in Section II.5.

15. In example 4, for instance, were France to be placed in the position of State S, it would refuse to apply the provisions of the Convention with State P because the fact that the partnership was not liable to tax in the State in which it was established would preclude it from claiming the benefits of the Convention.

16. We therefore cannot approve the proposed amendment of the Commentary on Article 1 in the Model Tax Convention with regard to the new paragraphs 6.5, 6.6 and 8.2 (Annex III of the report).

Administrative difficulties

17. Furthermore, France considers that the administrative difficulties with regard to implementation noted in example 9 (partnerships with many partners residing in different States), the problems regarding the flow in

information mentioned in example 10 (partnership established in a State which does not have a tax convention with the source State, which nonetheless has signed a Convention with the State of which the partners are residents), and the risks of double-exemptions in triangular cases in which the State of residence of the partners and the State in which the partnership has its head office apply the principle of transparency are of a such a nature as to invalidate the solution whereby the partnership is disregarded in order to allow the partners to benefit from application of the Convention.

Germany

Observations by Germany on paragraph 45

18. Germany does not share the views expressed in paragraph 45. Under the special provisions mentioned in paragraph 43 one may have to determine when the income is attributable to a permanent establishment in the State of the partnership or in a third State, but this is not more difficult with respect to a partnership than in other instances where it has to be determined whether income is effectively connected with a permanent establishment. How the reduction of a withholding tax should be calculated where only a "part" of the partnership is treated as a treaty resident may not always be clear. But as a rule this question would not arise, since the whole amount of the income of the partnership would normally be subject to tax in the State of the partnership. On the other hand, the question would always arise if the special provisions would not be inserted. In that case withholding tax reduction would have to be granted on the basis of the status of each partner for his share of the income. It is an extremely difficult task, particularly if there is a great number of partners being residents of different States, to attribute the income subject to withholding tax to the partners, because the withholding agent does not know the often very complicated and sometimes even abusive arrangements between the partners on the division of profits (and losses). This is the main reason why Germany proposes special provisions on partnerships. As for the last argument put forward in paragraph 45, it is true that the special provision would allow a third State partner to qualify for treaty benefits where the existence of a direct permanent establishment would not, but a strict rule to treat partnership income attributable to a third State partner always in the same way as income attributable to a direct permanent establishment does not exist. There are some particularities of partnerships which justify a different treatment.

Observations by Germany on paragraph 91 and 92

19. Germany would prefer an approach under which the partnership as such would be considered as the employer (as under the national law of most OECD member States including Germany even if these States do not tax the partnership as such). Since this employer has to reside somewhere, his residence would have to be determined hypothetically assuming the partnership were liable to tax by reason of one of the criteria mentioned in Article 4. In a case where a partnership established in one Contracting State sends an employee to carry on activities in the other contracting State where it has no permanent establishment, but where one of the partners is resident the difficulties described in paragraph 92 would not arise.

The Netherlands

20. The conclusions on the treatment of partnerships in the various situations described in the Report are presented as a matter of interpretation of the relevant articles of the Model Convention. We doubt whether these specific conclusions can be said to fully and directly flow from the original intentions underlying the respective articles. We also feel that the conclusions and the reasonings leading to them are not altogether consistent one with the other. In general it seems to us that the wish to provide a certain solution is allowed precedence over the question whether there actually is a legal base for such solution. Furthermore, we are uncertain whether it would be possible under Netherlands domestic law to fully implement the conclusions. Some conclusions might require adaptation of domestic rules (*e.g.* the participation exemption) that are not governed by a tax treaty. We finally note that the Report does not provide a comprehensive solution for all situations of juridical or economic double taxation or double non-taxation that might arise in the context of partnerships.

21. According to paragraph 47 of the Report “member countries may in their bilateral relations develop different solutions to the problems of double taxation which may arise in connection with partnerships”. This means that in the absence of such deviating bilateral solutions the conclusions in the Report would automatically prevail. Since bilateral solutions to the issue are still scarce – we are at this moment in the process of discussing such solutions with some of our major treaty partners and plan to have similar discussions with other treaty partners in the future – the conclusions in the Report would thus for the time being constitute the main rule. Given the difficulties we have with these conclusions, we would find that an unsatisfactory situation. We therefore prefer it to be up to our own initiative to decide, depending on the circumstances of the case at hand, whether, and to which extent, the conclusions of the Report are applicable.

22. For similar reasons we prefer also in respect of conflicts of qualification in general to maintain the right to decide ourselves whether the conclusions in the Report may be followed or instead any other solution that appears to be more suitable.

Observations to the proposed paragraphs 2-6 of the Commentary on Article 1

23. In the case of the Netherlands, the conclusions on the application of the Model Convention to partnerships in paragraphs 2-6 and in the Commentaries on other relevant articles are applicable only, and to the extent in which, it is explicitly stated so in a specific double taxation convention, as the result of mutual agreement between competent authorities according to Article 25 or as unilateral policy.

Observation to the proposed paragraphs 32.1-32.7 of the Commentary on Article 23 in respect of conflicts of qualification

24. In the case of the Netherlands, the paragraphs 32.1 to 32.7 regarding conflicts of qualification are applicable only if, and to the extent in which, it is explicitly stated so in a specific double taxation convention, as the result of mutual agreement between competent authorities according to Article 25 or as unilateral policy.

Portugal

25. Portugal, where all partnerships are taxed as such, makes observations on the report since the solutions put forward in that document should be incorporated in special provisions only applicable when included in tax conventions. This is the case, for example, of the treatment of the situation of partners of partnerships – a concept which is considerably fluid given the differences between States – that are fiscally transparent, including the situation where a third State is inserted between the State of source and the State of residence of the partners. The administrative difficulties resulting from some of the solutions put forward should also be noted, as indicated in the report itself in certain cases.

26. Also, the proposed drafting of paragraph 4 of Article 23 A could or does raise difficulties with respect to the drafting of paragraph 2 of Article 23 A.

Switzerland

27. The rules laid down in proposed paragraph 32 of the Commentary on Article 23 are helpful to avoid double taxation. On the other side they imply the danger that the State of residence becomes dependent on the State of source. If the State of source changes its internal law to enlarge its taxing right

the State of residence has to accept it. This could lead to undesirable results. To avoid such results it seems necessary to limit the scope of the rules in paragraphs 32.1-7 to the internal law of both States as it existed in the moment when the Convention was concluded. Problems arising due to changes in the internal law of a State after the conclusion of the Convention should be solved by a revision of the Convention. We would therefore like to insert the following observation to paragraph 32 of the proposed Commentary on Article 23:

> Switzerland reserves its right not to apply the rules laid down in paragraph 32 in cases where a conflict of qualification results from a modification to the internal law of the State of source subsequent to the conclusion of a Convention.

ANNEX III

LIST OF ENTITIES IN SELECTED COUNTRIES

This annex presents, following a standard format, the main tax treaty characteristics of the various legal forms that a business or investment can take under the domestic laws of the countries that have co-operated to the preparation of this report. It does not cover, however, the case of the individual who has sole ownership or control of a business (*i.e.* sole proprietorship) or investment. It also does not cover contractual arrangements (*i.e.* pension funds or investment funds in most countries) which do not create specific new legal forms by themselves but merely use existing legal vehicles (*i.e.* trusts or companies).

Australia

3.	**Does the entity file a tax return?**	Yes	Yes	Yes
4.	**Is tax on the income of the entity assessed on the entity itself?**	Yes	Not generally[5]	Yes
5.	**Is the tax which is imposed on the income of the entity as it arises a liability of the entity or a liability of the members?**	The entity	The members[6]	The entity
6.	**If the tax is paid by the members, how is the income classified for tax purposes?**	N/A	Retains its fiscal nature	N/A
7.	**Is the rate and type of tax applicable to the entity's income determined on the basis of the members?**	No	Rate determined in relation to each beneficiary.	Corporate tax rate is applied
8.	**Is tax imposed on the recipient when the income of the entity is distributed to its members etc.?**	Yes	N/A	Yes
9.	**If the answer to 8 is yes, how is that income classified for tax purposes?**	Dividend		Dividend
10.	**Does your country consider the entity as** a **"company" for purposes of tax treaties?**	Yes	No	Yes
11.	**Do you consider the entity a "resident" for purposes of tax treaties?**	Yes	Yes, if trustee is liable to tax	Yes

1. Must consist of a general partner, who has unlimited liability for the debts and obligations of the partnership, and one or more limited partners whose liability to the partnership is limited to the amount of money or property which each has contributed.
2. Partnership income is assessed to partners in year of derivation, not year of receipt.
3. Franking credits are available for tax paid directly by the company and for franking credits attached to dividends received. Resident shareholders deriving dividends (including franked dividends) are taxable, but imputation credits apply. A tax liability arises in the hands of the shareholder to the extent that the overall tax burden is higher then the credits attached to any franked dividends received. Franking credits are currently non-refundable and cannot be carried forward or back. For non-residents, dividends are exempt from Australian tax to the extent that they are franked (similar arguments for all entities treated as companies apply.)
4. Must be an eligible unit trust, whose units are traded on the stock exchange. Eligible unit trusts are a type of fixed trusts made up of unit holders having fixed interests in the income and capital of the trust. Common features of these unit trusts are:
   - An independent agent is employed to act as trustee.
   - Units are transferable. The ability to transfer units is often subject to the approval of specified people.
   - Additional units may be issued.
   - Unit holders may attend meetings and vote.
5. Beneficiaries are taxed on income to which they are presently entitled. Trustee will be taxed on any income to which beneficiaries are not entitled or where the beneficiaries are under legal disability or not resident. Non-resident beneficiaries are entitled to a credit for tax paid by trustee.
6. The trustee would also be liable to tax, subject to set off by the beneficiary *i.e.* reimbursed out of the beneficiary's share of trust property, if the beneficiary is under legal disability.

1. This form of partnership corresponds to the OHG and was designed for businesses which cannot be carried on in the legal form of an OHG (small-sized businesses, farmers and liberal professions).
2. If, however, part of the activities of the partnership is in the nature of "business income" then the entire partnership income will be reclassified as "business income"
3. See footnote 2.
4. The sleeping partnership is not considered as being a "partnership" under commercial law, because the "sleeping partner" is not made known to third parties. The tax regime for partnerships applies only to those sleeping partnership contracts where the sleeping partner participates not only in the profits but also in the capital gains of the enterprise.
5. This form of partnership corresponds to the KG and was designed for businesses which cannot be carried on in the legal form of a KG (small-sized businesses, farmers and liberal professions).
6. See footnote 2.
7. See footnote 2.
8. See footnote 2.
9. See footnote 2.

1. A trust which is resident in Canada is entitled to a deduction from its income for a taxation year to the extent it is paid or payable to a beneficiary in the year. In this way the trust is not taxed on such income.
2. For Canadian resident beneficiaries certain income (*e.g.* dividends, capital gains) retains its source and character for the purpose of calculating taxable income and tax payable of the beneficiary.
3. Dividends received by a Canadian corporation from another are tax free (by way of deduction from income), except certain dividends received by Canadian private corporations.
4. See previous footnote.

1. A limited partnership is considered, in accordance with the Czech Commercial Law, as a legal entity in the Czech Republic. The tax base is calculated under the same rules as for a joint stock company and a limited liability company. However, from the tax point of view, the limited partnership is a person the tax base of which is divided among its general partners and limited partners. The income which corresponds to the income of the general partners is taxed as business income in the hands of these partners. The general partner has to include this income in his income tax return. The income which corresponds to the income of the limited partners is taxed as a business income of a company (taxation of a legal person – the share of the general partners is deducted form the tax base of the company); distributions made to the limited partners from the after-tax profits of the company are taxed in their hands (at 25%).
2. A general partnership is also considered, in accordance with the Czech Commercial Law, as a legal entity in the Czech Republic. From the tax point of view, however, the income of the general partnership is divided among the partners according to their respective share (transparency). The income of the partnership is therefore taxable in the hands of the partners. Income such as dividends and interest (when withholding tax is applicable) constitutes an exception to this rule. In that respect, a general partnership is a taxpayer in the Czech Republic only to a very limited extent.

R (15)

Denmark *(cont.)*

1. A general partnership is also called a limited liability company. The characteristic of such a company is that there are more than 10 partners and that the partners do not take an active part in the company's activity.
2. Unlike the partners in a general partnership, the part owners of an owned shipping firm are liable pro rata in accordance with the Maritime Code.
3. There is only limited access to loss carry forward
4. Funds which annually distribute almost all profits
5. The association must buy, produce or sell commercial goods for the use of members' commercial undertakings and distribute profits in proportion to the turnover of individual members. There must be at least 10 members and sales to non-members must not exceed 25% of total sales.
6. Only income from commercial activity must be returned.
7. Income is assumed to be 4% of the association's capital and this is taxed at 14.3%.
8. But taxation of the association is affected by the value of transactions with non-members, if such transactions consistently exceed 25% of sales the association will be taxed as a normal company.
9. The association is liable to pay tax only on income from commercial activity. Profits earned by internal sale, *i.e.* by delivery to the members are not earned by commercial activity.
10. See footnote 6.
11. Dividends where members participate in the co-operative share capital, otherwise ordinary income.

Finland

1.	**Name of entity and common abbreviation**	Avoin yhtiö / Öppet bolag	Kommandiitiyhtiö (Ky)/ Kommanditbolag (Kb)	Osakeyhtiö (Oy)/ Aktiebolag (Ab)
2.	**English translation**	General partnership	Limited partnership	Limited company

9.	**If the answer to 8 is yes, how is that income classified for tax purposes?**	–	–	Dividends
10.	**Does your country consider the entity as a "company" for purposes of tax treaties?**	No	No	Yes
11.	**Do you consider the entity a "resident" for purposes of tax treaties?**	No	No	Yes

1. The total taxable income is computed at the level of the partnership. The tax, however, is assessed on each partner separately (*i.e.* tax demand notes are issued on each partner) on the basis of his share of the partnership income. The partner is responsible for his own tax.
2. See previous footnote.
3. The income of individuals is categorised either as investment income or as earned income. Investment income is defined as the proceeds from capital, gains from the disposal of assets (capital gains) and other income yielded by assets. The following items of income are examples of investment income: interest and rental income, dividends from companies listed on the stock exchange, income from forestry (with exceptions) and income from patents or copyrights (on certain conditions). Earned income is defined as any income other than investment income. Investment income includes, in addition to the items listed above, the investment income *share* of certain types of "mixed" income, such as dividends from companies *not* listed on a stock exchange, profits from business, income from agriculture and income from partnerships. Corporate income and the investment income of individuals are taxed at the same flat rate (28 per cent).

1. With the exception of limited liability companies set up by members of the same family, which can opt for the tax regime applicable to partnerships. If so, the regime is equivalent to that applicable to a general partnership.
2. The methods used to calculate taxable profits differ according to the quality of the members of the partnership:
   a) the share in profits corresponding to the rights of partners which are legal entities liable to corporation tax or individual farmers who come under a real business profits system (BIC) or a farm profits system (BA) is calculated in accordance with the relevant rules regarding corporation tax, business profits or farm profits (Article 238 bis K I of the general tax code);
   b) the shares in profits accruing to other companies are calculated and taxed on the basis of the nature of the activity and the amount of earnings of the company or partnership (Article 238 bis K II of the general tax code).
3. Unlike a general partnership, in which all the members have unlimited liability, a limited partnership is a company in which at least one of the partners is held indefinitely liable for the company's debts. The share of profits accruing to that partner or those partners is taxable according to the rules of French tax law applying to partnerships (the same system as for a general partnership). By contrast, the share of profits accruing to the sleeping partners is taxed in France according to the rules applying to joint-stock companies (corporation tax in the name of the company and taxation as dividends of the income distributed by the company to its general partners).
4. Of the company where the share of profits accruing to sleeping partners is concerned; of the partners where the share of profits accruing to general partners is concerned.

France *(cont.)*

5. See footnote 2.
6. Yes, where the profits corresponding to general partners' earnings entitlements are concerned; no, where the share in profits accruing to sleeping partners is concerned.
7. With the exception of civil partnerships, general partnerships, undeclared partnerships, economic interest groupings, and limited partnerships with respect to the share of profits accruing to general partners, which, if they have elected to be liable to corporation tax, are subjected to the same tax regime as that applying to limited companies.
8. In proportion to the share of profits accruing to their members who are indefinitely liable and whose names and addresses have been given to the authorities.

Japan *(cont.)*

1. An ordinary corporation, organized under the Commercial Code. All shareholders have limited liability.
2. Commonly used by small businesses and organized under the Limited Liability Company Law. All members have limited liability.
3. Members have unlimited liability for the debts of the entity. It is a legal entity organized under the Commercial Code and subject to corporate taxation.
4. There must be at least one member with unlimited liability and one member with limited liability. A limited liability member may not participate in the management. It is a legal entity organized under the Commercial Code and subject to corporate taxation.
5. A joint contract, under the Civil Code, and not a separate legal entity itself.
6. Formed under the Commercial Code and completely different from "*Kumiai*". It might be compared to the German "stille gesellshaft", one distinctive feature of this type of contract is that only the entrepreneur is recognized as an entity that undertakes its business.
7. Incorporated by special legislation. These entities are listed in Schedule III of the Corporation Tax Law and subject to corporate taxation at a lower rate.
8. Might be translated as "non-juridical organisation": an unincorporated organisation which has designated managers or representatives. Subject to corporate taxation only when it undertakes profit-making activities prescribed under the law.
9. The entrepreneur reports all profits under the *Tokumei-kumiai*. When the entrepreneur distributes profits to the investors, the distribution is subject to withholding tax unless the number of investors is less than ten. If the investors are non-resident, the income is classified as income arising from property located in Japan.
10. See previous footnote.
11. See previous footnote.

1. According to Mexican Civil Law, the A en P is a non-corporate entity, since its legal nature is that of a contract.
2. The tax shall be paid by one of the members on behalf of the entity with respect to its total income which is considered as business income. If such member does not pay the tax, the other members are jointly liable for the tax.
3. Although the A en P is not considered a company under Mexican Civil Law, it is taxed as a corporation for tax purposes, as of 1999.

1. A General partnership is an enterprise where the partners have an unlimited personal responsibility for the aggregate liabilities of the enterprise, jointly, or partly if the parts put together constitute the whole of the liabilities of the enterprise and the enterprise acts as such towards third parties.For taxation purposes there are no differences.
2. A limited partnership is an enterprise where at least one of the partners has an unlimited responsibility for the liabilities of the enterprise and there is at least one partner who has a limited responsibility for a stated amount of the liabilities of the enterprise unless that partner is a silent partner.
3. Silent partnership is an enterprise which does not act as such towards third parties. The partners may have either limited or unlimited responsibility.
4. The income of the partnership will be regarded as business income. In relation to partners resident abroad, the result will depend upon whether the partners have a permanent establishment or not. If they have a p.e., the income will be regarded as business income. If the partners receive only passive income (no p.e.), the nature of the income (*e.g.* dividends, interest or royalty) is considered and the relevant article of the convention is applied.

11.	**Do you consider the entity a "resident" for purposes of tax treaties?**	Yes	No	No

1. The tax base of the limited partnership is divided among its general partners and limited partners. The income of general partners is taxed as business income in the hands of these partners. The general partner must include this income in his income tax return. The income of limited partners is taxed as business income of a company. The income shared by the general partners is deducted from the tax base of the company.

Foreword

This publication, the seventh in the series "Issues in International Taxation", includes the report entitled "Issues Related to Article 14 of the Model Tax Convention", which the Committee on Fiscal Affairs adopted, and decided to make available to the public, on 27 January 2000.

Article 14 of the OECD Model Tax Convention deals with the taxation of professional services and other activities of an independent character. The report deals with a number of problems relating to the interpretation and application of Article 14. It recommends the elimination of Article 14 from the Model Tax Convention and identifies a number of changes to the Model that will be required as a consequence. Those changes will be included in the next update to the Model.

INTRODUCTION

1. In 1996, the Committee set up a working group to examine a number of problems of interpretation and application of Article 14 of the OECD Model Tax Convention. This publication contains the report of that working group, which was approved by the Committee on 27 January 2000.[1] The main recommendation of this report is that Article 14 be eliminated from the Model Tax Convention. Section I of this report presents the recommendation to eliminate Article 14. Sections II to V contain the analysis of the relationship between Articles 7 and 14 on which that recommendation is based. The Annex includes a description of the changes to the Model Tax Convention that will result from the elimination of Article 14.

I. THE ELIMINATION OF ARTICLE 14

2. Having examined the various problems of application and interpretation raised by Article 14, the Committee found that all these issues raised the more fundamental question of whether it was appropriate to maintain that Article in the Model Tax Convention.

3. In order to reach a conclusion on that question, the Committee examined the relationship between Articles 7 and 14. The following questions, which are discussed in sections II to IV below, were found to be especially relevant:

- Which activities fall within Article 14 as opposed to Article 7? Is the distinction between these activities satisfactory and easy to apply?
- Which entities fall within Article 14 as opposed to Article 7?
- What are the practical differences concerning taxation under Article 7 and 14? In particular, are there differences between the concepts of permanent establishment and fixed base?
- If Article 14 were eliminated, would there need to be changes to Article 7?

4. As the paragraphs below will indicate, the Committee concluded that, with respect to these various aspects of Articles 7 and 14, there was either no practical difference between the two Articles or, where such differences existed, there did not appear to be any valid policy justification for them. Having concluded that any practical differences between Articles 7 and 14 did not appear to be justified, the Committee considered two approaches: trying to eliminate these differences by making Article 14 a mirror image of Article 7 or merely deleting Article 14. The Committee concluded that the elimination of Article 14 from the Model Tax Convention would be the more logical approach.

5. Deleting Article 14 from the Model requires a number of changes to the provisions of the Model and to the Commentary thereon, as would have required any attempt to solve the issues whilst retaining Article 14 in the Model Tax Convention. These changes are presented in the Annex.

II. WHICH ACTIVITIES FALL WITHIN ARTICLE 14?

6. If there are no differences in result whether Article 7 or 14 applies, there is no need to distinguish the activities that fall within the first Article from those that fall within the second. Where, however, there are such differences (*e.g.* if the rule of paragraph 3 of Article 5 could apply or if a 183 day rule were included in Article 14 but not in Article 7 – *cf.* below), such a need arises.

7. It is, however, far from clear which activities fall within Article 14. To a large extent, the uncertainty results from the fact that, whilst the 1963 Draft Double Taxation Convention referred to "professional services or other independent activities of a similar character", the current Model refers to "professional services or other activities of an independent character", a broader formulation.

8. For instance, it has been suggested that the activities of sub-contractors in the construction industry, which would otherwise come under Article 7, may be caught by this broader formulation. That has led to a suggestion that the new formulation should be replaced by "other similar activities" or "similar services" to avoid that result, therefore partly reversing the change made in the 1977 Model.

9. A number of member countries indicated that, in practice, they only applied Article 14 to professional services, thereby ignoring *de facto* the reference to "other activities of an independent character". The Committee could not readily define that phrase, noting that, if read literally, it could potentially apply to any activity falling under Article 7. Whilst paragraph 1 of the Commentary on Article 14 states that the Article excludes "industrial and commercial activities", it has been suggested that the strict wording of the paragraph and the priority given to Article 14 over Article 7 by paragraph 7 of the latter Article support a different conclusion. It was also noted that the reference to "services or other activities" in paragraph 1 suggests that there is also a discrepancy between the text of the Article, which covers services and other activities, and its title, which only refers to personal services.

10. The Committee considered whether the wording of paragraph 1 of the Article should be amended so as to read as it did in the 1963 Draft Double Taxation Convention. This, however, would have required the clarification of what activities are of a "similar character" to professional services. Whilst the Committee felt that it would be difficult to determine what are activities of a

MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

"similar character", it expressed the view that these would not include the activities of building subcontractors.

11. The fact that the 1977 change does not appear to have led to practical difficulties in determining which activities fall under Article 14 must be attributed to the fact that the rules of Articles 7 and 14 are similar and that Article 14 has generally been considered to be applicable only to individuals, so as to minimise the importance of the distinction between activities that fall within Article 7 and those that fall under Article 14. It must be recognised, however, that the 1977 change could eventually create practical difficulties, especially in cases where the provisions of paragraphs 3 to 6 of Article 5 would be relevant. Also, as stated below, it is questionable whether it is appropriate to restrict the application of Article 14 to individuals. All these difficulties justify the decision to eliminate Article 14.

12. The Committee also examined the relationship between Articles 14 and 15. On the basis of the second sentence of paragraph 1 of the Commentary on Article 14 and of the title of Article 14, which refers to "independent" services as opposed to the phrase "dependent services" found in the title of Article 15, it is clear that the activities covered by Article 14 exclude those carried on in an employment relationship. It is, however, sometimes difficult to distinguish between particular activities carried out in an employment relationship and those carried out in an independent capacity (*e.g.* university professors and teachers being asked to perform research or give a few lectures in another country). The elimination of Article 14 will not solve that issue as the distinction is also relevant for the purposes of Articles 7 and 15. Whilst paragraph 2 of Article 3 would require that such cases be solved on the basis of the domestic law of the state that applies the Convention, it is recognised that this could result in conflicts of qualification, which would then need to be resolved using, where appropriate, the mutual agreement procedure (see also Section III of the report on the Application of Tax Conventions to Partnerships).

III. WHICH ENTITIES FALL WITHIN ARTICLE 14?

13. The personal scope of application of Article 14 is also unclear. The main issue is whether the Article applies to individuals only or whether it is also applicable to legal persons. Another issue is to what extent it applies to partnerships.

14. It has sometimes been argued that the use of the pronoun "his", in paragraph 1 of Article 14, indicates that the Article was intended to apply to individuals only. The Committee, however, found the argument to be far from convincing as paragraph 1 of Article 4, which clearly applies to both

individuals and legal persons, also uses the pronoun "his" when referring to the various criteria for full liability to tax.

15. Whilst the Commentary on Article 14 does not directly deal with this issue, the Commentary on the United Nations Model notes that the Experts Group generally agreed that a payment for services made to an individual would fall under Article 14 whilst "payments made to an enterprise in respect of the furnishing by that enterprise of the activities of employees or other personnel are subject to Article 5" [*i.e.* would fall under Article 7 because of the definition of permanent establishment under Article 5]. That statement, however, can be explained by the fact that the United Nations Model includes a 183 day rule applicable to services in both Articles but that only the provision in Article 5 is drafted in a way that makes it readily applicable to a legal person. Also, the Commentary of the United Nations Model expressly allows parties that believe that the relationship between Articles 5 and 14 needs to be clarified to do so in the course of negotiations, thereby recognising the potential uncertainty.

16. In an observation included in the Commentary on Article 14 (*cf.* paragraph 4.1 of that Commentary), Mexico has officially stated its position that Article 14 also applies to legal persons. This view is shared by other countries, such as Turkey, which have interpreted Article 14 as applying to legal persons.

17. The Committee noted that it was now more frequent for professionals to incorporate than it was when Article 14 was drafted. Since it could not see any justification for imposing different rules to services depending on whether they were provided by an individual (Article 14) or a legal person (Article 7),[2] or to have different Articles if the rules were the same, it considered this as another reason to eliminate Article 14.

18. The application of Article 14 to partnerships presents other problems. Countries that treat partnerships as fiscally transparent would generally recognise that Article 14 applies to the individuals who are partners in that partnership.[3] This, however, raises the question as to whether the partners must then personally perform services in the source country to be taxable therein on their share of the partnership's income attributable to a fixed base of the partnership located in that country. This issue is discussed below.

19. In the case of countries that treat partnerships as non-fiscally transparent, the result would likely be different since, in that case, the problem of the application of Article 14 to legal persons, which is discussed above, would arise.

20. Mixed partnerships, where some partners are individuals and others are legal persons, would create a particular problem if Article 14 were found to apply only to individuals. In that case, either the partners who are legal

persons would be covered by Article 7 whilst the partners who are individuals would be covered by Article 14 or, alternatively, Article 14 would not apply to any partner of a partnership where at least one partner were a legal person. Neither approach would be satisfactory.

IV. WHAT ARE THE PRACTICAL DIFFERENCES CONCERNING TAXATION UNDER ARTICLES 7 AND 14?

21. At the outset, the Committee agreed that if there were significant practical differences between the rules of Article 7 and Article 14, there would not appear to be a valid justification for the resulting different treatment of large professional partnerships and incorporated professionals. Such a different treatment would not appear to be adapted to modern ways of providing cross-border professional services, where a number of professionals, in particular engineers, provide their services through companies.

22. For the purpose of determining whether there were significant practical differences between the rules of Articles 7 and 14, the Committee analysed the following various questions:

- Are there differences between the concepts of "permanent establishment" and "fixed base"?
- Does Article 14 restrict source taxation to income from services performed personally by the taxpayer?
- Are the specific rules of paragraphs 2-7 of Article 7 applicable to Article 14?
- Are there differences in the source taxation rights granted under Articles 7 and 14?
- Does the distinction between Articles 7 and 14 have any impact on domestic law distinctions?

a) Are there differences between the concepts of "permanent establishment" and "fixed base"?

23. Whilst Article 7 refers to the concept of "permanent establishment", which is defined in Article 5, Article 14 refers to the undefined concept of "fixed base". The Committee examined whether there were any practical differences between the two concepts and, if yes, whether this was intended. It concluded that, except where the provisions of paragraphs 3 to 6 of Article 5 applied, there were no practical differences between the two concepts.

24. The Committee noted that it had sometimes been suggested in the literature that a permanent establishment might require a greater degree of permanence than a fixed base. Also, it noted that the definition of "permanent

establishment" requires that a business be actually carried on in a fixed place of business whilst there is no such requirement with respect to a fixed base, which needs only be regularly available.

25. To the extent that the concept of permanent establishment is narrower than that of fixed base, it might be argued that eliminating Article 14 would increase the threshold for taxation, which could in turn raise concerns, for instance, with respect to Articles 10, 11 and 12. One example that was discussed in that respect is that of an office opened to provide services, but which, because of subsequent events, is never used for that purpose. Whilst the office would not fall within the definition of permanent establishment as long as no business was carried on therein, it could arguably constitute a fixed base.

26. The Committee, however, felt that such lower threshold, assuming that it existed, would not be a significant practical issue. In the above example, there would be no income from services to tax and the provisions of paragraphs 4 of Article 10 and 11 and paragraph 3 of Article 12 would not be applicable as these paragraphs require that independent personal services be performed from the fixed base.

27. The Committee also noted that it would be difficult to see any difference between the phrases "fixed place of business" and "fixed base". As a matter of fact, it could be argued that a "base" from which activities are performed is somewhat narrower than a "place of business" and that the "regularly available" requirement found in Article 14 but not in Article 7 might in fact restrict the scope of Article 14 so as to impose, in some cases, a higher taxation threshold than in Article 7. For instance, one could argue that there are cases where income is attributable to a fixed place that is sometimes, but not regularly, available for performing the services and that this income therefore escapes source taxation under Article 14.

28. Notwithstanding any such theoretical differences, the Committee could not, in practice, find examples of fixed bases that would not be permanent establishments or vice-versa. The examples of "fixed bases" found in paragraph 4 of the Commentary on Article 14, *i.e.* a physician's consulting room or the office of a lawyer or architect, would, for instance, equally constitute permanent establishments.

29. In reaching that conclusion, however, the Committee distinguished the case of the rules of paragraphs 3 to 6 of Article 5. Whilst the Commentary on Article 14 "imports" the principles of Article 7, it does not refer at all to Article 5. This would support the conclusion, based on a strict reading of Articles 5 and 14, that the rules of these paragraphs have no application to fixed bases. Whilst it could be argued that the reference, in the Commentary on Article 14, to the rules of Article 7 concerning "allocation of profits between

head office and permanent establishment" might constitute an indirect reference to Article 5, this would seem to be a tenuous link.

30. In trying to decide whether the principles of Article 5 should apply to fixed bases, the most relevant rules to examine are those of paragraphs 3, 5 and 6 of that Article.

1) Paragraph 3: construction site

31. The question of whether the rule of paragraph 3 of Article 5, which provides that a construction site or construction or installation project constitutes a permanent establishment only if it lasts more than twelve months, should apply to a fixed base, has practical significance especially with respect to services rendered by engineers and architects.

32. On the one hand, most member countries indicated that, in practice, they would consider that engineers or architects who maintain an office on a particular construction site that lasts more than twelve months would be considered to have a fixed base. On the other hand, they did not rule out that a fixed base could exist even if the construction site lasted for a shorter period.

33. This approach appears consistent with the conclusion that the construction site rule of paragraph 3 of Article 5 is not applicable to fixed bases since that rule is drafted as an exclusion from the permanent establishment concept rather than as a rule that creates a deemed permanent establishment. It raises, however, the issue of whether it is appropriate to have different treatment of various activities conducted on the same construction site. Eliminating Article 14 will mean that activities of supervising engineers on a construction site will become subject to the general taxation threshold applicable to other non-residents performing activities on a construction site, a result that the Committee considers appropriate.

2) Paragraphs 5 and 6: dependent and independent agent rules

34. A similar issue is whether the so-called dependent and independent agents rules of paragraphs 5 and 6 of Article 5 should be applicable to fixed bases.

35. In some cases, the independent agent rule of paragraph 6 has been applied to determine that a fixed base did not exist. U.S. Revenue ruling 75-131, which has been followed by a number of similar rulings,[4] referred to the pre-1977 Commentary on Article 14, which stated that Article 14 was based on the same principles of Article 7, to conclude that the "independent agent" rule of Article 5 applied so that a U.S. corporation that acted as an agent for a French concert player did not constitute a fixed base of the artiste. Also, in a 1992 decision, the Dutch *Hoge Raad* held that a photo model resident in the

Netherlands did not have a fixed base through her commission agent in France and in Germany.

36. There does not appear to have been cases, however, where paragraph 5 would have been applied to deem a fixed base to exist. Because the application of paragraph 5, unlike that of paragraph 6, would result in additional source taxation, it would be a more serious test.

37. Again, the Committee found no justification for not applying the rules of paragraphs 5 and 6 to the activities covered by Article 14, and therefore finds it appropriate to make these rules applicable to such income through the elimination of Article 14.

b) Does Article 14 restrict source taxation to income from services performed personally by the taxpayer?

38. An issue that has attracted some attention is whether the application of source taxation under Article 14 is restricted to the person who provides the services or whether it applies also to anyone who derives income from these services. The following example illustrates the problem. A, B and C, three lawyers who are residents of State A, form a partnership. The partnership opens an office in State B, where only D, a new partner resident of State B, will provide services. It is agreed that the partnership's income will be divided equally among the four partners so that each partner will derive a share of the income from services rendered in State A as well as in State B. The issue, in that case, is whether Article 14 allows State B to tax that part of the income related to the services rendered therein that accrues to the partners resident in State A, even though these partners have not, themselves, rendered any services in State B.

39. The first approach is to consider that Article 14, like Article 7, applies to any person who derives income from the services performed through a fixed base so that partners A, B and C are taxable in State B. Under that approach, it is argued that since paragraph 1 of Article 14 refers to "income derived by a resident ... in respect of ... services" rather than to "income derived by a resident... in respect of... his services", the paragraph may be applied to someone who is not performing the services referred to in the paragraph but who derives income from these services. That approach reduces the differences between Article 14 and Article 7 but would indirectly seem to support the view that Article 14 also applies to companies.

40. The second approach is to consider that Article 14 only allows State B to tax income attributable to a fixed base that is used by a non-resident to provide his personal services so that A, B and C are not taxable in State B as long as they do not personally provide any services therein. Under that approach, the words "for the purpose of performing his activities" are

interpreted so that the office in State B is not considered to be a fixed base regularly available to A, B, C for the purposes of performing their activities, since they do not perform any activities in that office.

41. The second approach narrows considerably the scope of source taxation under Article 14. It would seem to create tax avoidance opportunities since it would allow all the profits related to professional services rendered through a fixed base, as long as they are allocated to non-resident partners, to escape source taxation. Similarly, that approach would prevent the State where the fixed base is located from taxing any of the partnership's profits attributable to that fixed base if the partnership's activities in that State were exclusively carried out by employees.

42. The second approach, clearly, would produce a result that would be at odds with that under Article 7, particularly when taking into account the implications of paragraph 5 of Article 5 (the "agency permanent establishment" rule) in the legal context of a partnership.

43. It has been argued, however, that the second approach solves the important administrative difficulties that would result from the first approach, which would require each of the partners of a partnership that has offices in many countries to comply with the tax requirements of all these countries (*e.g.* possibly having to file a great number of tax returns). This might explain why that approach has sometimes been applied.[5] For example, in a 1993 Revenue ruling, the Internal Revenue Service of the U.S. adopted the second approach and decided that the German resident partners in a German partnership that had an office in the U.S. would not be liable to U.S. tax on their distributive share attributable to the U.S. office as they did not perform any services in the United States. That approach, however, has now been expressly rejected by the United States in its most recent tax treaties. It should also be noted that specific legislation has been adopted in the United States to provide for regulations that would alleviate some of the administrative difficulties described above.[6]

44. The Committee concluded that the first approach was the correct one. It considered that the second approach, apart from producing an inappropriate result, was based on a deficient interpretation of Article 14. According to the Committee, when applying Article 14 to the income allocated to each partner, the activities of the partnership must be attributed to the partners to the same extent as is the fixed base of the partnership, so that it may be said that each partner "has a fixed base ... for the purpose of performing his activities". This is consistent with the views expressed in the report on the Application of Model Tax Convention to Partnerships. Clearly, eliminating Article 14 will make sure that the second approach is no longer argued.

45. The Committee noted, however, that the administrative difficulties described in paragraph 48 above in relation to Article 14 would also exist under Article 7. For that reason, the Committee favours a more general solution to these difficulties.[7] It considers, for instance, that the legislative approach adopted in the United States is a useful way of addressing this issue. The Committee also discussed to what extent these administrative difficulties constitute a practical, as opposed to a theoretical, problem.

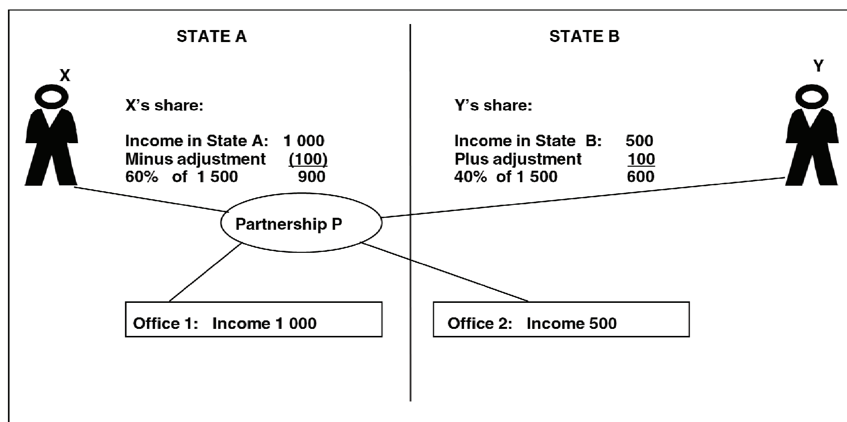
46. It was suggested in that respect that taxpayers can avoid the administrative difficulties noted above by providing in their partnership's agreement that the income arising in a particular country will only, or primarily, be allocated to the partners who are residents in that country ("special allocation" rules).

47. It seems, however, that countries adopt different positions as regards the extent to which such special allocation rules can be recognised for tax purposes. Some countries feel bound to follow the provisions of the partnership's agreement as regards both the amount and the nature or source of the part of the partnership's income that is allocated to a partner. Other countries consider that a partner's share of the partnership's income includes the same pro rata share of all items of income earned by the partnership regardless of any contractual arrangement purporting to allocate these items of income on the basis of their nature or source. There are also intermediary positions as some countries may agree to recognise such special allocation rules for tax purposes as long as they have economic substance or subject to general or specific anti-avoidance rules allowing them to disregard any income allocation that is primarily tax-motivated. A country may also condition its acceptance of special allocation rules to a requirement that these rules not allow for top-up payments to a partner in the event that the type or source of income allocated to him produces a lower share of income.

48. This is another example of the many differences that exist in the tax treatment of partnerships under the domestic laws of member countries. As the provisions of the Model Tax Convention do not restrict the application of domestic law with respect to this particular issue, it is recognised that conflicts may arise in that respect. The following example illustrates such a conflict.

Example: *Partnership P has been established in State A. Partner X is a resident of State A, a credit country that recognises special allocations for tax purposes. Partner Y is a resident of State B, an exemption country that does not recognise special allocations. Partnership P maintains office 1 in State A which generates income of 1 000 in year 01; it also maintains office 2 in state B which generates income of 500 in the same year. The partnership's agreement provides that, subject to an"equalisation"adjustment, partner X is entitled to the income realised by the*

partnership in State A and partner Y to the income realised in State B. The "equalisation" adjustment is the amount required to be added or subtracted to such income in order to ensure that X and Y's shares of the overall profit of the partnership equal 60% and 40% respectively.



49. In that example, State B will consider, on the basis of its domestic law, that Partner X derives 300 (60% of 500) from a fixed base situated on its territory and that Partner Y, who is taxed as a resident, derives 200 (40% of 500) from its territory and is entitled to an exemption for the 400 (40% of 1 000) that he derives from State A.

50. State A, which recognizes special allocations, will consider that Partner X derives all of his income (900) from State A. It will also consider that only the adjustment amount (*i.e.* 100) constitutes income of Partner Y derived from a fixed base situated on its territory.

51. As a result, Partner X will be taxed on 900 in State A and State A will consider that that income arises from its territory. He will also be taxed on 300 in State B, which that country will consider as arising on its territory. The result will be double taxation on 300 of income because of the different allocation rules and the resulting conflict concerning the source of the income of Partner X. By contrast, Partner Y will only be taxed on 200 in State B and 100 in State A, the amount that State A considers as attributable to a fixed base located on its territory; there will therefore be double non taxation of 300 in his case.

52. The Committee concluded that this is an example of a conflict of source. It noted that some conventions solve this type of conflict by providing that income which may be taxed in a State in accordance with the Convention shall be deemed to arise from sources situated in that State for purposes of the application of the provisions of the Convention dealing with the elimination of double taxation. It also noted that the conclusions put forward in Part III of the

R (16)

report on the Application of the Model Tax Convention to Partnerships may also be relevant to the extent that a conflict of source could also constitute a conflict of qualification.

53. The Committee also discussed the treatment of "salary" or similar payments which may be paid to a partner to supplement income attributed to him under special allocation rules (*e.g.* in the case of a partner who is asked to work in a new office established in an emerging market economy). Under the domestic law of some countries, such payments would be considered as employment income of the partner rather than as a share of the partnership income, thereby reducing the amount of income attributable to non-resident partners. The fact that other countries would take the opposite view could result in conflicts of qualification. Again, the principles put forward in Part III of the report on the Application of the Model Tax Convention to Partnerships would help avoiding situations where such conflicts would result in double taxation or double non-taxation.

54. Another possibility is that of an office of a partnership located in a particular country which would be offered "guaranteed" fees by other offices of the same partnership in order to artificially increase the income attributable to that office for purposes of the application of special allocation rules. The Committee concluded that such arrangements might be problematic in light of paragraph 2 of Article 7, which, under the Commentary thereon, is implicitly applicable in determining the income attributable to a fixed base.

c) Are the specific rules of paragraphs 2-7 of Article 7 rules applicable to Article 14?

55. Whilst paragraph 3 of the Commentary on Article 14 indicates that the provisions of Article 7 and the Commentary thereon could be used as guidance for interpreting and applying Article 14, it has been suggested that there is no clear authority in the text of Article 14 for such conclusion. Also, whilst the Commentary on Article 14 expressly confirms the application to Article 14 of the provisions of paragraphs 2 and 3 of Article 7, it does not mention paragraphs 4 to 7 of that Article.

56. The Committee found that member countries have generally considered that paragraphs 2-6 of Article 7 are applicable, so far as they may be relevant in a particular case, to the income currently treated under Article 14. It concluded that the elimination of Article 14 made it unnecessary to clarify that position. It was unclear, however, to what extent the priority rule of paragraph 7 of Article 7 can apply to Article 14.

d) Are there differences in the source taxation rights granted under Articles 7 and 14?

57. Whilst Article 7 provides for the source taxation of "profits" attributable to a permanent establishment, Article 14 allows the source State to tax the "income" attributable to a fixed base.

58. On the one hand, it is clear that the concept of profits corresponds to the "net" income, *i.e.* after the deduction of relevant expenses, a result that is confirmed by paragraph 3 of Article 7. On the other hand, the concept of income, which is used in Article 14, can be interpreted more broadly so as to allow taxation on either a gross or net basis. This interpretation is confirmed by the fact that the phrase "income derived", which is found in Article 14, is also found in other Articles, such as Articles 6 (Income from Immovable Property) and 17 (Artistes and Sportsmen), where it has been interpreted to allow taxation of gross payments.[8] Arguably, a further confirmation of that interpretation is the fact that paragraph 3 of Article 24 (Non-discrimination), which has a direct effect on the deduction of expenses related to a permanent establishment, is not applicable to fixed bases.

59. Paragraph 3 of the Commentary on Article 14, however, clearly states that the expenses incurred for the purposes of a fixed base should be allowed as a deduction in determining the income attributable to a fixed base in the same way as is provided by paragraph 3 of Article 7. Most member countries confirmed that, in practice, their country would allow the deduction of expenses in taxing the income attributable to a fixed base and agreed that there would be no policy justification for allowing tax to be levied differently under Articles 7 and 14. They did, however, recognise the difficulty created by the use, in Article 14, of the phrase "income derived". Again, any uncertainty in that respect will be removed through the elimination of Article 14.

e) Does the distinction between Articles 7 and 14 have any impact on domestic law distinctions?

60. The Committee discussed the extent to which any differences between Articles 7 and 14 might have an impact where, under domestic laws, there exist separate rules for the taxation of professional services and other business profits (*e.g.* where cash accounting applies to professional services but not to other activities).

61. It was noted that whilst member countries may have such separate rules in their domestic laws, the application of these rules would not be influenced by the distinction between Article 7 and 14 as the distinctions made by tax treaties would generally not matter for the application of distinctions made under domestic laws, except maybe for the application of foreign tax credit provisions.

62. On that basis, the Committee concluded that the elimination of Article 14 will not prevent countries from continuing to apply any distinction between professional services and other business profits that might exist under their domestic tax laws.

V. DOES THE ELIMINATION OF ARTICLE 14 REQUIRE CHANGES TO ARTICLE 7?

63. By eliminating Article 14, the income previously covered by that Article will fall under Article 7. The Committee found it important to confirm that result to prevent arguments that either Article 21 or Article 15, for example, could apply to that income. The Committee agreed that, apart from changes resulting directly from the elimination of the Article, changes to the Commentary on Articles 5 and 7 and to some of the Articles in the Model themselves would be useful, in particular to make sure that the concept of enterprise applied to the provision of professional services.

Notes

1. At the time of adopting the report, Italy and Portugal indicated that they reserved the right to continue to include Article 14 concerning the taxation of independent personal services in their Conventions.
2. One example of a possible exploitation of the perceived differences between Articles 7 and 14 would be that of an individual who is in business on his own account as an architect or surveyor and who decides to undertake a contract in another country through a one-man company in order to fall under Article 7 and take advantage of the exclusion provided for under paragraph 3 of Article 5 (see paragraphs 31 to 33).
3. Sweden, however, adopts a different approach since it treats most foreign partnerships as legal persons for Swedish tax purposes, with the result that fiscally transparent foreign partnerships and their partners are not entitled to the benefits of tax treaties with respect to the partnership's income.
4. See for instance Revenue rulings 78-12-038, 78-12-045, 78-38-063 and-82-49-047.
5. It has also been suggested that the second approach provides a better result with respect to the application of personal allowances and progressive rates. This, however, is a consideration that generally supports residence as opposed to source taxation. It should also be noted that, as regards taxation by the country of residence of the partner, a system of foreign tax credit or exemption with progression will reduce the difficulties that the first approach may create in that respect.
6. See section 1141(a) of the United States Taxpayer Relief Act of 1997.
7. As noted above (see note 3), Sweden treats most foreign partnerships as taxpayers for Swedish tax purposes, thereby avoiding these administrative difficulties in the case of foreign partnerships. The Committee, however, concluded that the general

adoption of that approach would create more difficulties than it would solve with respect to the application of tax conventions to partnerships' income.

8. See, for instance, the last sentence of paragraph 4 of the Commentary on Article 6 as well as paragraph 10 of the Commentary on Article 17.

ANNEX

CHANGES TO THE MODEL TAX CONVENTION RESULTING FROM THE DECISION TO ELIMINATE ARTICLE 14

The following are the changes to the Model Tax Convention resulting from the decision to eliminate Article 14. Changes to the existing text of the Model Tax Convention and the Commentary are indicated by ~~strikethrough~~ for deletions and ***bold italics*** for additions.

Changes to the Articles

Article 3

1. In paragraph 1 of Article 3, renumber existing subparagraphs *c*) to *f*) as subparagraphs *d*) to *g*) and add the following new subparagraphs *c*) and *h*):

c) the term "enterprise" applies to the carrying on of any business;

h) the term "business" includes the performance of professional services and of other activities of an independent character."

Article 6

2. Replace paragraph 4 of Article 6 by the following:

4. The provisions of paragraphs 1 and 3 shall also apply to the income from immovable property of an enterprise~~ and to income from immovable property used for the performance of independent personal services~~.

Article 10

3. Replace paragraph 4 of Article 10 by the following:

4. The provisions of paragraphs 1 and 2 shall not apply if the beneficial owner of the dividends, being a resident of a Contracting State, carries on business in the other Contracting State of which the company paying the dividends is a resident, through a permanent establishment situated therein~~, or performs in that other State independent personal services from a fixed base situated therein,~~ and the holding in respect of which the dividends are paid is effectively connected with such permanent establishment~~ or fixed base~~. In such case the provisions of Article 7~~ or Article 14, as the case may be,~~ shall apply.

4. Replace paragraph 5 of Article 10 by the following:

5. Where a company which is a resident of a Contracting State derives profits or income from the other Contracting State, that other

State may not impose any tax on the dividends paid by the company, except insofar as such dividends are paid to a resident of that other State or insofar as the holding in respect of which the dividends are paid is effectively connected with a permanent establishment ~~or a fixed base~~ situated in that other State, nor subject the company's undistributed profits to a tax on the company's undistributed profits, even if the dividends paid or the undistributed profits consist wholly or partly of profits or income arising in such other State.

Article 11

5. Replace paragraph 4 of Article 11 by the following:

4. The provisions of paragraphs 1 and 2 shall not apply if the beneficial owner of the interest, being a resident of a Contracting State, carries on business in the other Contracting State in which the interest arises, through a permanent establishment situated therein~~, or performs in that other State independent personal services from a fixed base situated therein,~~ and the debt-claim in respect of which the interest is paid is effectively connected with such permanent establishment ~~or fixed base~~. In such case the provisions of Article 7 ~~or Article 14 , as the case may be,~~ shall apply.

6. Replace paragraph 5 of Article 11 by the following:

5. Interest shall be deemed to arise in a Contracting State when the payer is a resident of that State. Where, however, the person paying the interest, whether he is a resident of a Contracting State or not, has in a Contracting State a permanent establishment ~~or a fixed base~~ in connection with which the indebtedness on which the interest is paid was incurred, and such interest is borne by such permanent establishment ~~or fixed base~~, then such interest shall be deemed to arise in the State in which the permanent establishment ~~or fixed base~~ is situated.

Article 12

7. Replace paragraph 3 of Article 12 by the following:

3. The provisions of paragraph 1 shall not apply if the beneficial owner of the royalties, being a resident of a Contracting State, carries on business in the other Contracting State in which the royalties arise, through a permanent establishment situated therein~~, or performs in that other State independent personal services from a fixed base situated therein~~, and the right or property in respect of which the royalties are paid is effectively connected with such permanent establishment ~~or~~

~~fixed base~~. In such case the provisions of Article 7 ~~or Article 14, as the case may be,~~ shall apply.

Article 13

8. Replace paragraph 2 of Article 13 by the following:

2. Gains from the alienation of movable property forming part of the business property of a permanent establishment which an enterprise of a Contracting State has in the other Contracting State ~~or of movable property pertaining to a fixed base available to a resident of a Contracting State in the other Contracting State for the purpose of performing independent personal services~~, including such gains from the alienation of such a permanent establishment (alone or with the whole enterprise) ~~or of such fixed base~~, may be taxed in that other State.

Article 14

9. Delete Article 14. The remaining Articles of the Model will not be renumbered. Article 14 and its title will therefore be shown in brackets with the phrase “Deleted”.

Article 15

10. Replace the title of Article 15 by the following:

INCOME FROM EMPLOYMENT~~DEPENDENT PERSONAL SERVICES~~

11. Replace subparagraph 2(c) of Article 15 by the following:

c) “the remuneration is not borne by a permanent establishment ~~or a fixed base~~ which the employer has in the other State.”

Article 17

12. Replace paragraph 1 of Article 17 by the following:

1. Notwithstanding the provisions of Articles ~~14~~**7** and 15, income derived by a resident of a Contracting State as an entertainer, such as a theatre, motion picture, radio or television artiste, or a musician, or as a sportsman, from his personal activities as such exercised in the other Contracting State, may be taxed in that other State.

13. Replace paragraph 2 of Article 17 by the following:

2. Where income in respect of personal activities exercised by an entertainer or a sportsman in his capacity as such accrues not to the entertainer or sportsman himself but to another person, that income may, notwithstanding the provisions of Articles 7~~, 14~~ and 15, be taxed in

the Contracting State in which the activities of the entertainer or sportsman are exercised.

Article 21

14. Replace paragraph 2 of Article 21 by the following:

2. The provisions of paragraph 1 shall not apply to income, other than income from immovable property as defined in paragraph 2 of Article 6, if the recipient of such income, being a resident of a Contracting State, carries on business in the other Contracting State through a permanent establishment situated therein~~, or performs in that other State independent personal services from a fixed base situated therein,~~ and the right or property in respect of which the income is paid is effectively connected with such permanent establishment~~ or fixed base~~. In such case the provisions of Article 7 ~~or Article 14, as the case may be,~~ shall apply.

Article 22

15. Replace paragraph 2 of Article 22 by the following:

2. Capital represented by movable property forming part of the business property of a permanent establishment which an enterprise of a Contracting State has in the other Contracting State ~~or by movable property pertaining to a fixed base available to a resident of a Contracting State in the other Contracting State for the purpose of performing independent personal services~~, may be taxed in that other State.

Changes to the Commentary

Commentary on Article 1

16. Replace paragraph 4 of the Commentary on Article 1 by the following:

4. Moreover, different rules of the Convention may be applied in the Contracting States to income derived by a partner from the partnership, depending on the approach of such States. In States where partnerships are treated as companies, distributions of profits to the partners may be considered to be dividends (paragraph 3 of Article 10), whilst for other States all profits of a partnership, whether distributed or not, are considered as business profits of the partners (Article 7). In many States, business profits of partnerships include, for tax purposes, all or some special remuneration paid by a partnership to its partners (such as rents, interest, royalties, remuneration for services), whilst in other States such

payments are not dealt with as business profits (Article 7) but under other headings (in the above-mentioned examples: Articles 6, 11, 12~~, 14~~ and 15, respectively).

Commentary on Article 3

17. Replace paragraph 4 of the Commentary on Article 3 by the following:

4. The question whether an activity is performed within an enterprise or is deemed to constitute in itself an enterprise has always been interpreted according to the provisions of the domestic laws of the Contracting States. No ***exhaustive*** definition of the term ‘enterprise’ has therefore been attempted in this Article. ***However, it is provided that the term ‘enterprise’ applies to the carrying on of any business. Since the term ‘business’ is expressly defined to include the performance of professional services and of other activities of an independent character, this clarifies that the performance of professional services or other activities of an independent character must be considered to constitute an enterprise, regardless of the meaning of that term under domestic law. States which consider that such clarification is unnecessary are free to omit the definition of the term ‘enterprise’ from their bilateral conventions***.

18. Add the following heading and paragraph 10.1 to the Commentary on Article 3:

THE TERM ‘BUSINESS’

10.1 The Convention does not contain an exhaustive definition of the term ‘business’, which, under paragraph 2, should generally have the meaning which it has under the domestic law of the State that applies the Convention. Sub-paragraph h), however, provides expressly that the term includes the performance of professional services and of other activities of an independent character. This provision was added in 2000 at the same time as Article 14, which dealt with Independent Personal Services, was deleted from the Convention. This addition, which ensures that the term ‘business’ includes the performance of the activities which were previously covered by Article 14, was intended to prevent that the term ‘business’ be interpreted in a restricted way so as to exclude the performance of professional services, or other activities of an independent character, in States where the domestic law does not consider that the performance of such services or activities can constitute a business. Contracting States for which this is not the case are free to agree bilaterally to omit the definition.

Commentary on Article 5

19. Add the following paragraph 1.1 to the Commentary on Article 5:

1.1 Before 2000, income from professional services and other activities of an independent character was dealt under a separate Article, i.e. Article 14. The provisions of that Article were similar to those applicable to business profits but it used the concept of fixed base rather than that of permanent establishment since it had originally been thought that the latter concept should be reserved to commercial and industrial activities. The elimination of Article 14 in 2000 reflected the fact that there were no intended differences between the concepts of permanent establishment, as used in Article 7, and fixed base, as used in Article 14, or between how profits were computed and tax was calculated according to which of Article 7 or 14 applied. The elimination of Article 14 therefore meant that the definition of permanent establishment became applicable to what previously constituted a fixed base.

Commentary on Article 6

20. Replace paragraphs 3 and 4 of the Commentary on Article 6 by the following:

3. Paragraph 3 indicates that the general rule applies irrespective of the form of exploitation of the immovable property. Paragraph 4 makes it clear that the provisions of paragraphs 1 and 3 apply also to income from immovable property of industrial, commercial and other enterprises~~ and to income from immovable property used for the performance of independent personal services~~.

4. It should be noted in this connection that the right to tax of the State of source has priority over the right to tax of the other State and applies also where, in the case of an enterprise ~~or of non-industrial and non-commercial activities,~~ income is only indirectly derived from immovable property. This does not prevent income from immovable property, when derived through a permanent establishment, from being treated as income of an enterprise, but secures that income from immovable property will be taxed in the State in which the property is situated also in the case where such property is not part of a permanent establishment situated in that State. It should further be noted that the provisions of the Article do not prejudge the application of domestic law as regards the manner.

Commentary on Article 7

21. Add the following new paragraph 2.1 to the Commentary on Article 7:

2.1 Before 2000, income from professional services and other activities of an independent character was dealt under a separate Article, i.e. Article 14. The provisions of that Article were similar to those applicable to business profits but it used the concept of fixed base rather than that of permanent establishment since it had originally been thought that the latter concept should be reserved to commercial and industrial activities. However, it was not always clear which activities fell within Article 14 as opposed to Article 7. The elimination of Article 14 in 2000 reflected the fact that there were no intended differences between the concepts of permanent establishment, as used in Article 7, and fixed base, as used in Article 14, or between how profits were computed and tax was calculated according to which of Article 7 or 14 applied. The effect of the deletion of Article 14 is that income derived from professional services or other activities of an independent character is now dealt with under Article 7 as business profits. This was confirmed by the addition of a definition of the term 'business' which expressly provides that this term includes professional services or other activities of an independent character.

R (16)

22. Replace paragraph 35 of the Commentary on Article 7 by the following:

35. It has seemed desirable, however, to lay down a rule of interpretation in order to clarify the field of application of this Article in relation to the other Articles dealing with a specific category of income. In conformity with the practice generally adhered to in existing bilateral conventions, paragraph 7 gives first preference to the special Articles on dividends, interest etc. It follows from the rule that this Article will be applicable to ~~industrial and commercial~~***business*** income which does not belong to categories of income covered by the special Articles, and, in addition, to dividends, interest etc. which under paragraph 4 of Articles 10 and 11, paragraph 3 of Article 12 and paragraph 2 of Article 21, fall within this Article (*cf.* paragraphs 12 to 18 of the Commentary on Article 12 which discusses the principles governing whether, in the particular case of computer software, payments should be classified as ~~commercial~~ income within Articles 7 ~~or 14~~ or as a capital gains matter within Article 13 on the one hand or as royalties within Article 12 on the other). It is understood that the items of income covered by the special Articles may, subject to the provisions of the Convention, be taxed either separately, or as ~~industrial and commercial~~***business*** profits, in conformity with the tax laws of the Contracting States.

MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

Commentary on Article 10

23. Replace paragraphs 2, 32 and 34 of the Commentary on Article 10 by the following:

> 2. The profits of a business carried on by a partnership are the partners' profits derived from their own exertions; for them they are ~~industrial or commercial~~ ***business*** profits. So the partner is ordinarily taxed personally on his share of the partnership capital and partnership profits.
>
> ~~32. The rules set out above also apply where the beneficiary of the dividends has in the other Contracting State, for the purpose of performing any of the kinds of independent personal services mentioned in Article 14, a fixed base with which the holding in respect of which the dividends are paid is effectively connected.~~
>
> 34. Paragraph 5 rules out the extra-territorial taxation of dividends, *i.e.* the practice by which States tax dividends distributed by a non-resident company solely because the corporate profits from which the distributions are made originated in their territory (for example, realised through a permanent establishment situated therein). There is, of course, no question of extra-territorial taxation when the country of source of the corporate profits taxes the dividends because they are paid to a shareholder who is a resident of that State or to a permanent establishment ~~or fixed base~~ situated in that State.

Commentary on Article 11

24. Replace paragraphs 25 and 30 of the Commentary on Article 11 by the following:

> 25. ~~The rules set out above also apply where the beneficiary of the interest has in the other Contracting State, for the purpose of performing any of the kinds of independent personal services mentioned in Article 14, a fixed base with which the debt-claim in respect of which the interest is paid is effectively connected.~~
>
> 30. Moreover, in the case – not settled in paragraph 5 – where whichever of the two Contracting States is that of the payer's residence and the third State in which is situated the permanent establishment for the account of which the loan is effected and by which the interest is borne, together claim the right to tax the interest at the source, there would be nothing to prevent those two States together with, where appropriate, the State of the beneficiary's residence from concerting measures to avoid the double taxation that would result from such claims. The proper remedy, it must be said again, would be the

establishment between these different States of bilateral conventions, or a multilateral convention, containing a provision similar to that in paragraph 5. Another solution would be for two Contracting States to word the second sentence of paragraph 5 in the following way:

> Where, however, the person paying the interest, whether he is a resident of a Contracting State or not, has in a State other than that of which he is a resident a permanent establishment ~~or a fixed base~~ in connection with which the indebtedness on which the interest is paid was incurred, and such interest is borne by such permanent establishment ~~or fixed base~~, then such interest shall be deemed to arise in the State in which the permanent establishment ~~or fixed base~~ is situated.

Commentary on Article 12

25. Replace paragraphs 10, 11, 14, 16 and 21 of the Commentary on Article 12 by the following:

> 1. In principle, royalties in respect of licences to use patents and similar property and similar payments are income to the recipient from a letting. The letting may be granted in connection with an ~~industrial or commercial~~ enterprise (*e.g.* the use of literary copyright granted by a publisher ~~) or an independent profession (*e.g*~~***or the*** use of a patent granted by the inventor) or quite independently of any activity of the grantor (*e.g.* ***the*** use of a patent granted by the inventor's heirs).

> 10. Rents in respect of cinematograph films are also treated as royalties, whether such films are exhibited in cinemas or on the television. It may, however, be agreed through bilateral negotiations that rents in respect of cinematograph films shall be treated as ~~industrial and commercial~~***business*** profits and, in consequence, subjected to the provisions of Articles 7 and 9.

> 11. In classifying as royalties payments received as consideration for information concerning industrial, commercial or scientific experience, paragraph 2 alludes to the concept of 'know-how'. Various specialist bodies and authors have formulated definitions of know-how which do not differ intrinsically. One such definition, given by the 'Association des Bureaux pour la Protection de la Propriété Industrielle' (ANBPPI), states that 'know-how is all the undivulged technical information, whether capable of being patented or not, that is necessary for the industrial reproduction of a product or process, directly and under the same conditions; inasmuch as it is derived from experience, know-how represents what a manufacturer cannot know from mere examination of the product and mere knowledge of the progress of technique.' In the

know-how contract, one of the parties agrees to impart to the other, so that he can use them for his own account, his special knowledge and experience which remain unrevealed to the public. It is recognised that the grantor is not required to play any part himself in the application of the formulas granted to the licensee and that he does not guarantee the result thereof. This type of contract thus differs from contracts for the provision of services, in which one of the parties undertakes to use the customary skills of his calling to execute work himself for the other party. Thus, payments obtained as consideration for after-sales service, for services rendered by a seller to the purchaser under a guarantee, for pure technical assistance, or for an opinion given by an engineer, an advocate or an accountant, do not constitute royalties within the meaning of paragraph 2. Such payments generally fall under Article 7 ~~or Article 14~~. In business practice, contracts are encountered which cover both know-how and the provision of technical assistance. One example, amongst others, of contracts of this kind is that of franchising, where the franchisor imparts his knowledge and experience to the franchisee and, in addition, provides him with varied technical assistance, which, in certain cases, is backed up with financial assistance and the supply of goods. The appropriate course to take with a mixed contract is, in principle, to break down, on the basis of the information contained in the contract or by means of a reasonable apportionment, the whole amount of the stipulated consideration according to the various parts of what is being provided under the contract, and then to apply to each part of it so determined the taxation treatment proper thereto. If, however, one part of what is being provided constitutes by far the principal purpose of the contract and the other parts stipulated therein are only of an ancillary and largely unimportant character, then it seems possible to apply to the whole amount of the consideration the treatment applicable to the principal part.

14. In other cases, the acquisition of the software will generally be for the personal or business use of the purchaser. The payment will then fall to be dealt with as ***business profits***~~commercial income~~ in accordance with Article~~s~~ 7~~ or 14~~. It is of no relevance that the software is protected by copyright or that there may be restrictions on the use to which the purchaser can put it..

16. Each case will depend on its particular facts but in general such payments are likely to be ***business profits***~~commercial income~~ within Article 7 ~~or 14~~ or a capital gains matter within Article 13 rather than royalties within Article 12. That follows from the fact that where the ownership of rights has been alienated in full or in part, the consideration cannot be for the use of the rights. The essential character

of the transaction as an alienation cannot be altered by the form of the consideration, the payment of the consideration in instalments or, in the view of most countries, by the fact that the payments are related to a contingency.

~~21. The rules set out above also apply where the beneficiary of the royalties has in the other Contracting State, for the purpose of performing any of the kinds of independent personal services mentioned in Article 14, a fixed base with which the right or property in respect of which the royalties are paid is effectively connected.~~

Commentary on Article 13

26. Replace paragraphs 9, 22, 24, 25 and 27 of the Commentary on Article 13 by the following:

9. Where capital appreciation and revaluation of business assets are taxed, the same principle should, as a rule, apply as in the case of the alienation of such assets. It has not been found necessary to mention such cases expressly in the Article or to lay down special rules. The provisions of the Article as well as those of Articles 6, 7 and 21, seem to be sufficient. As a rule, the right to tax is conferred by the above-mentioned provisions on the State of which the alienator is a resident, except that in the cases of immovable property or of movable property forming part of the business property of a permanent establishment ~~or pertaining to a fixed base~~, the prior right to tax belongs to the State where such property is situated. Special attention must be drawn, however, to the cases dealt with in paragraphs 13 to 17 below.

22. Paragraph 1 states that gains from the alienation of immovable property may be taxed in the State in which it is situated. This rule corresponds to the provisions of Article 6 and of paragraph 1 of Article 22. It applies also to immovable property forming part of the assets of an enterprise. ~~or used for performing independent personal services.~~ For the definition of immovable property paragraph 1 refers to Article 6. Paragraph 1 of Article 13 deals only with gains which a resident of a Contracting State derives from the alienation of immovable property situated in the other Contracting State. It does not, therefore, apply to gains derived from the alienation of immovable property situated in the Contracting State of which the alienator is a resident in the meaning of Article 4 or situated in a third State; the provisions of paragraph 1 of Article 21 shall apply to such gains.

24. Paragraph 2 deals with movable property forming part of the business property of a permanent establishment of an enterprise ~~or pertaining to a fixed base used for performing independent personal~~

~~services~~. The term 'movable property' means all property other than immovable property which is dealt with in paragraph 1. It includes also incorporeal property, such as goodwill, licences, etc. Gains from the alienation of such assets may be taxed in the State in which the permanent establishment ~~or fixed base~~ is situated, which corresponds to the rules for business profits ~~and for income from independent personal services~~ (Article~~s~~ 7 ~~and 14~~).

25. The paragraph makes clear that its rules apply when movable property of a permanent establishment ~~or fixed base~~ is alienated as well as when the permanent establishment as such (alone or with the whole enterprise) ~~or the fixed base as such~~ is alienated. If the whole enterprise is alienated, then the rule applies to such gains which are deemed to result from the alienation of movable property forming part of the business property of the permanent establishment. The rules of Article 7 should then apply *mutatis mutandis* without express reference thereto. For the transfer of an asset from a permanent establishment in one State to a permanent establishment (or the head office) in another State, *cf.* paragraph 10 above.

27. Certain States consider that all capital gains arising from sources in their territory should be subject to their taxes according to their domestic laws, if the alienator has a permanent establishment within their territory. Paragraph 2 is not based on such a conception which is sometimes referred to as 'the force of attraction of the permanent establishment'. The paragraph merely provides that gains from the alienation of movable property forming part of the business property of a permanent establishment ~~or of movable property pertaining to a fixed base used for performing independent personal services~~ may be taxed in the State where the permanent establishment ~~or the fixed base~~ is situated. The gains from the alienation of all other movable property are taxable only in the State of residence of the alienator as provided in paragraph 4. The foregoing explanations accord with those in the Commentary on Article 7.

Commentary on Article 14

27. Replace the whole of the Commentary on Article 14 by the following:

"***[COMMENTARY ON ARTICLE 14 CONCERNING THE TAXATION OF INDEPENDENT PERSONAL SERVICES]***

[Article 14 was deleted from the Model Tax Convention on 27 January 2000. That decision reflected the fact that there were no intended differences between the concepts of permanent establishment, as used in Article 7, and fixed base, as used in Article 14, or between how profits were computed and

tax was calculated according to which of Article 7 or 14 applied. In addition, it was not always clear which activities fell within Article 14 as opposed to Article 7. The effect of the deletion of Article 14 is that income derived from professional services or other activities of an independent character is now dealt with under Article 7 as business profits.]"

~~1. The Article is concerned with what are commonly known as professional services and with other activities of an independent character. This excludes industrial and commercial activities and also professional services performed in employment, *e.g.* a physician serving as a medical officer in a factory. It should, however, be observed that the Article does not concern independent activities of artistes and sportsmen, these being covered by Article 17.~~

~~2. The meaning of the term "professional services" is illustrated by some examples of typical liberal professions. The enumeration has an explanatory character only and is not exhaustive. Difficulties of interpretation which might arise in special cases may be solved by mutual agreement between the competent authorities of the Contracting States concerned.~~

~~3. The provisions of the Article are similar to those for business profits and rest in fact on the same principles as those of Article 7. The provisions of Article 7 and the Commentary thereon could therefore be used as guidance for interpreting and applying Article 14. Thus the principles laid down in Article 7 for instance as regards allocation of profits between head office and permanent establishment could be applied also in apportioning income between the State of residence of a person performing independent personal services and the State where such services are performed from a fixed base. Equally, expenses incurred for the purposes of a fixed base, including executive and general expenses, should be allowed as deductions in determining the income attributable to a fixed base in the same way as such expenses incurred for the purposes of a permanent establishment (*cf.* paragraph 3 of Article 7). Also in other respects Article 7 and the Commentary thereon could be of assistance for the interpretation of Article 14, *e.g.* in determining whether computer software payments should be classified as commercial income within Articles 7 or 14 or as royalties within Article 12.~~

~~4. Even if Articles 7 and 14 are based on the same principles, it was thought that the concept of permanent establishment should be reserved for commercial and industrial activities. The term "fixed base" has therefore been used. It has not been thought appropriate to try to define it, but it would cover, for instance, a physician's consulting room~~

~~or the office of an architect or a lawyer. A person performing independent personal services would probably not as a rule have premises of this kind in any other State than of his residence. But if there is in another State a centre of activity of a fixed or a permanent character, then that State should be entitled to tax the person's activities.~~

~~Observation on the Commentary~~

~~4.1 Mexico considers that this Article is applicable to companies that perform professional services.~~

~~Reservations on the Article~~

~~5. Turkey reserves the right to tax persons performing professional services or other activities of an independent character if they are present in this country for a period or periods exceeding in the aggregate 183 days in the calendar year, even if they do not have a fixed base available to them for the purpose of performing such services or activities.~~

~~6. Portugal and Spain reserve their position on paragraph 1.~~

~~7. Denmark, Mexico and Norway reserve the right to tax individuals performing professional services or other activities of an independent character if they are present on their respective territory for a period or periods exceeding in the aggregate 183 days in any twelve month period.~~

~~8. Denmark, Ireland, Norway and the United Kingdom reserve the right to insert in a special article provisions regarding income derived from independent personal services relating to offshore hydrocarbon exploration and exploitation and related activities.~~

~~9. Greece, the Czech Republic and New Zealand reserve the right to tax individuals performing professional services or other activities of an independent character if they are present on their respective territory for a period or periods exceeding in the aggregate 183 days in any twelve month period, even if they do not have a fixed base available to them for the purpose of performing such services or activities.~~

~~10. Greece reserves the right to insert special provisions regarding income derived from independent personal services relating to offshore activities.~~

Commentary on Article 15

28. Replace the heading of the Commentary on Article 15 and add a footnote to it as follows:

COMMENTARY ON ARTICLE 15 CONCERNING THE TAXATION OF *INCOME FROM EMPLOYMENT*[1] ~~DEPENDENT PERSONAL SERVICES~~

1. Before 2000, the title of Article 15 referred to 'Dependent Personal Services' by contrast to the title of Article 14, which referred to 'Independent Personal Services'. As a result of the elimination of the latter Article, the title of Article 15 was changed to refer to 'Employment', a term that is more commonly used to describe the activities to which the Article applies. This change was not intended to affect the scope of the Article in any way.

29. Replace paragraphs 3, 7.1, 17 and 21 of the Commentary on Article 15 by the following:

3. Paragraph 2 contains, however, a general exception to the rule in paragraph 1. This exception covers all individuals rendering ~~dependent personal~~ services ***in the course of an employment*** (sales representatives, construction workers, engineers, etc.), to the extent that their remuneration does not fall under the provisions of other Articles, such as those applying to government services or artistes and sportsmen.

7.1 Under the third condition, if the employer has in the State in which the employment is exercised a permanent establishment, ~~(or a fixed base if he performs professional services or other activities of an independent character),~~ the exemption is given only on condition that the remuneration is not borne by a permanent establishment ~~or a fixed base~~ which he has in that State.

17. *Ireland*, *Norway* and the *United Kingdom* reserve the right to insert in a special Article provisions regarding income derived from ***employment***~~dependent personal~~ relating to offshore hydrocarbon exploration and exploitation and related activities.

21. *Greece* reserves the right to insert special provisions regarding income from ***employment***~~dependent personal~~ relating to offshore activities.

Commentary on Article 17

30. Replace paragraphs 1, 2, 9, 11 and 15.1 of the Commentary on Article 17 by the following:

1. Paragraph 1 provides that artistes and sportsmen who are residents of a Contracting State may be taxed in the other Contracting State in which their personal activities as such are performed, whether these are ***of a business or employment nature***~~an independent or of a dependent nature~~. This provision is an exception to the rules in Article ~~14~~ ***7*** and to that in paragraph 2 of Article 15, respectively.

2. This provision makes it possible to avoid the practical difficulties which often arise in taxing artistes and sportsmen performing abroad. Moreover, too strict provisions might in certain cases impede cultural exchanges. In order to overcome this disadvantage, the States concerned may, by common agreement, limit the application of paragraph 1 to ~~independent~~***business*** activities. To achieve this it would be sufficient to amend the text of the Article so that an exception is made only to the provisions of Article ***7***~~14~~. In such a case, artistes and sportsmen performing ~~for a salary or wages~~***in the course of an employment*** would automatically come within Article 15 and thus be entitled to the exemptions provided for in paragraph 2 of that Article.

9. Besides fees for their actual appearances, artistes and sportsmen often receive income in the form of royalties or of sponsorship or advertising fees. In general, other Articles would apply whenever there was no direct link between the income and a public exhibition by the performer in the country concerned. Royalties for intellectual property rights will normally be covered by Article 12 rather than Article 17 (*cf.* paragraph 18 of the Commentary on Article 12), but in general advertising and sponsorship fees will fall outside the scope of Article 12. Article 17 will apply to advertising or sponsorship income, etc. which is related directly or indirectly to performances or appearances in a given State. Similar income which could not be attributed to such performances or appearances would fall under the standard rules of Article ~~14~~ ***7*** or Article 15, as appropriate. Payments received in the event of the cancellation of a performance are also outside the scope of Article 17, and fall under Articles 7~~, 14~~ or 15, as the case may be.

11. Paragraph 1 of the Article deals with income derived by individual artistes and sportsmen from their personal activities. Paragraph 2 deals with situations where income from their activities accrues to other persons. If the income of an entertainer or sportsman accrues to another person, and the State of source does not have the statutory right to look through the person receiving the income to tax it as income of the performer, paragraph 2 provides that the portion of the income which cannot be taxed in the hands of the performer may be taxed in the hands of the person receiving the remuneration. If the person receiving the income ***carries on business activities***~~is an enterprise~~, tax may be applied by the source country even if the income is not attributable to a permanent establishment there ~~If the person receiving the income is an~~

~~individual, the income may be taxed even in the absence of a fixed base~~. But it will not always be so. There are three main situations of this kind~~.~~:

- *a)* The first is the management company which receives income for the appearance of *e.g.* a group of sportsmen (which is not itself constituted as a legal entity).
- *b)* The second is the team, troupe, orchestra, etc. which is constituted as a legal entity. Income for performances may be paid to the entity. Individual members of the team, orchestra, etc. will be liable to tax under paragraph 1, in the State in which a performance is given, on any remuneration (or income accruing for their benefit) as a counterpart to the performance; however, if the members are paid a fixed periodic remuneration and it would be difficult to allocate a portion of that income to particular performances, member countries may decide, unilaterally or bilaterally, not to tax it. The profit element accruing from a performance to the legal entity would be liable to tax under paragraph 2.
- *c)* The third situation involves certain tax avoidance devices in cases where remuneration for the performance of an artiste or sportsman is not paid to the artiste or sportsman himself but to another person, *e.g.* a so-called artiste company, in such a way that the income is taxed in the State where the activity is performed neither as personal service income to the artiste or sportsman nor as profits of the enterprise, in the absence of a permanent establishment. Some countries "look through" such arrangements under their domestic law and deem the income to be derived by the artiste or sportsman; where this is so, paragraph 1 enables them to tax income resulting from activities in their territory. Other countries cannot do this. Where a performance takes place in such a country, paragraph 2 permits it to impose a tax on the profits diverted from the income of the artiste or sportsman to the enterprise. It may be, however, that the domestic laws of some States do not enable them to apply such a provision. Such States are free to agree to other solutions or to leave paragraph 2 out of their bilateral conventions.

15.1 *France* considers that the statement in the first sentence of paragraph 13, which is at variance with the wording prior to the 1995 revision, is incorrect, because it does not conform with reality to characterise *a priori* as ~~industrial or commercial~~***business*** the public activities at issue – and in particular cultural activities – that do not

ordinarily have a profit motive. In addition, this statement is not consistent with the second sentence of the same paragraph or with paragraph 14, which explicitly provides the right to apply a special exemption regime to the public activities in question: if applied generally to ~~industrial or commercial~~***business*** activities, such a regime would be unjustified, because it would then be contrary to fiscal neutrality and tax equality.

Commentary on Article 18

31. Replace paragraphs 9, 11, 12 and 35 of the Commentary on Article 18 by the following:

9. The provision is confined to the tax treatment of contributions to pension schemes by or on behalf of individuals who exercise employments within the meaning of Article 15 away from their home State. It does not deal with contributions by individuals who ***perform business activities covered by Article 7***~~who render independent personal services within the meaning of Article 14~~. However, member countries may wish, in bilateral negotiations, to agree on a provision covering individuals rendering services within both Article ~~14~~ ***7*** and Article 15.

11. The following is the suggested text of the provision that could be included in bilateral conventions to deal with the problem identified above:

a) Contributions borne by an individual who renders ~~dependent personal~~ services ***in the course of an employment*** in a Contracting State to a pension scheme established in and recognised for tax purposes in the other Contracting State shall be deducted, in the first-mentioned State, in determining the individual's taxable income, and treated in that State, in the same way and subject to the same conditions and limitations as contributions made to a pension scheme that is recognised for tax purposes in that first-mentioned State, provided that:

i) pension scheme, immediately before he began to exercise employment in that State; and

ii) the pension scheme is accepted by the competent authority of that State as generally corresponding to a pension scheme recognised as such for tax purposes by that State.

b) For the purposes of sub-paragraph *a*):

i) the term 'a pension scheme' means an arrangement in which the individual participates in order to secure retirement benefits payable in respect of the

employment~~dependent personal services~~ referred to in sub-paragraph *a*); and

ii) a pension scheme is recognised for tax purposes in a State if the contributions to the scheme would qualify for tax relief in that State."

12. Sub-paragraph *a*) of the suggested provision lays down the characteristics of both the employee and the contributions to which the provision applies. It also provides the principle that contributions borne by an individual rendering ~~dependent personal~~ services ***in the course of an employment*** within the meaning of Article 15 in one Contracting State (the host State) to a defined pension scheme in the other Contracting State (the home State) are to be relieved from tax in the host State, subject to the same conditions and limitations as relief for contributions to domestic pension schemes of the host State.

35. The definition of a pension scheme makes no distinction between pensions paid from State-run occupational pension schemes and similar privately-run schemes. Both are covered by the scope of the provision. Any pensions, such as pensions from general State pension schemes dependent on contribution records whether or not contributors are employees, are excluded from the provision as the individual will not contribute to such schemes in order to receive benefits payable in respect of ~~dependent personal~~ his employment.

Commentary on Article 19

32. Replace paragraph 13 of the Commentary on Article 19 by the following:

13. *France* considers that the scope of the application of Article 19 should cover:

- remuneration paid by public legal entities of the State or a political subdivision or local authority thereof, because the identity of the payer is less significant than the public nature of the income;
- public remuneration of artistes and sportsmen in conformity with the wording of the Model prior to 1995 (without applying the criterion of ~~industrial or commercial~~***business*** activity, seldom relevant in these cases), as long as Article 17 does not contain a provision along the lines suggested in paragraph 14 of the Commentary on Article 17.

Commentary on Article 21

33. Replace paragraphs 4 and 5 of the Commentary on Article 21 by the following:

> 4. This paragraph provides for an exception from the provisions of paragraph 1 where the income is associated with the activity of a permanent establishment ~~or fixed base~~ which a resident of a Contracting State has in the other Contracting State. The paragraph includes income from third States. In such a case, a right to tax is given to the Contracting State in which the permanent establishment ~~or the fixed base~~ is situated. Paragraph 2 does not apply to immovable property for which, according to paragraph 4 of Article 6, the State of situs has a primary right to tax (*cf.* paragraphs 3 and 4 of the Commentary on Article 6). Therefore, immovable property situated in a Contracting State and forming part of the business property of a permanent establishment of an enterprise of that State situated in the other Contracting State shall be taxable only in the first-mentioned State in which the property is situated and of which the recipient of the income is a resident. This is in consistency with the rules laid down in Articles 13 and 22 in respect of immovable property since paragraph 2 of those Articles applies only to movable property of a permanent establishment.
>
> 5. The paragraph also covers the case where the beneficiary and the payer of the income are both residents of the same Contracting State, and the income is attributed to a permanent establishment ~~or a fixed base~~, which the beneficiary of the income has in the other Contracting State. In such a case a right to tax is given to the Contracting State in which the permanent establishment ~~or the fixed base~~ is situated. Where double taxation occurs, the State of residence should give relief under the provisions of Article 23 A or 23 B. However, a problem may arise as regards the taxation of dividends and interest in the State of residence as the State of source: the combination of Articles 7 and 23 A prevents that State from levying tax on that income, whereas if it were paid to a resident of the other State, the first State, being the State of source of the dividends or interest, could tax such dividends or interest at the rates provided for in paragraph 2 of Articles 10 and 11. Contracting States which find this position unacceptable may include in their conventions a provision according to which the State of residence would be entitled, as State of source of the dividends or interest, to levy a tax on such income at the rates provided for in paragraph 2 of Articles 10 and 11. The State where the permanent establishment is situated would give a credit for such tax on the lines of the provisions of paragraph 2 of Article 23 A or of paragraph 1 of Article 23 B; of course, this credit should

R (16)

not be given in cases where the State in which the permanent establishment is situated does not tax the dividends or interest attributed to the permanent establishment, in accordance with its domestic laws.

Commentary on Article 22

34. Replace paragraph 3 of the Commentary on Article 22 by the following:

3. The Article, therefore, enumerates first property which may be taxed in the State in which they are situated. To this category belong immovable property referred to in Article 6 which a resident of a Contracting State owns and which is situated in the other Contracting State (paragraph 1), and movable property forming part of the business property of a permanent establishment which an enterprise of a Contracting State has in the other Contracting State~~, or pertaining to a fixed base which a resident of a Contracting State has in the other Contracting State for the performance of independent personal services~~ (paragraph 2).

Commentary on Articles 23 A and 23 B

35. Replace paragraphs 3, 5, 9 and 10 of the Commentary on Article 23 A and 23 B by the following:

3. International juridical double taxation may arise in three cases:

a) where each Contracting State subjects the same person to tax on his worldwide income or capital (concurrent full liability to tax, *cf.* paragraph 4 below);

b) where a person is a resident of a Contracting State (R)[1] and derives income from, or owns capital in, the other Contracting State (S or E) and both States impose tax on that income or capital (*cf.* paragraph 5 below);

c) where each Contracting State subjects the same person, not being a resident of either Contracting State to tax on income derived from, or capital owned in, a Contracting State; this may result, for instance, in the case where a non-resident person has a permanent establishment ~~or fixed base~~ in one Contracting State (E) through which he derives income from, or owns capital

1 Throughout the Commentary on Articles 23 A and 23 B, the letter "R" stands for the State of residence within the meaning of the Convention, "S" for the State of source or situs, and "E" for the State where a permanent establishment is situated.

in, the other Contracting State (S) (concurrent limited tax liability, *cf.* paragraph 11 below).

5. The conflict in case *b*) may be solved by allocation of the right to tax between the Contracting States. Such allocation may be made by renunciation of the right to tax either by the State of source or situs (S) or of the situation of the permanent establishment ~~or the fixed base~~ (E), or by the State of residence (R), or by a sharing of the right to tax between the two States. The provisions of the Chapters III and IV of the Convention, combined with the provisions of Article 23 A or 23 B, govern such allocation.

9. Where a resident of the Contracting State R derives income from the same State R through a permanent establishment ~~or a fixed base~~ which he has in the other Contracting State E, State E may tax such income (except income from immovable property situated in State R) if it is attributable to the said permanent establishment ~~or fixed base~~ (paragraph 2 of Article 21). In this instance too, State R must give relief under Article 23 A or Article 23 B for income attributable to the permanent establishment ~~or fixed base~~ situated in State E, notwithstanding the fact that the income in question originally arises in State R (*cf.* paragraph 5 of the Commentary on Article 21). However, where the Contracting States agree to give to State R which applies the exemption method a limited right to tax as the State of source of dividends or interest within the limits fixed in paragraph 2 of the Articles 10 or 11 (*cf.* paragraph 5 of the Commentary on Article 21), then the two States should also agree upon a credit to be given by State E for the tax levied by State R, along the lines of paragraph 2 of Article 23 A or of paragraph 1 of Article 23 B.

10. Where a resident of State R derives income from a third State through a permanent establishment ~~or a fixed base~~ which he has in State E, such State E may tax such income (except income from immovable property situated in the third State) if it is attributable to such permanent establishment ~~or fixed base~~ (paragraph 2 of Article 21). State R must give relief under Article 23 A or Article 23 B in respect of income attributable to the permanent establishment ~~or fixed base~~ in State E. There is no provision in the Convention for relief to be given by Contracting State E for taxes levied in the third State where the income arises; however, under paragraph 4 of Article 24 any relief provided for in the domestic laws of State E (double taxation conventions excluded) for residents of State E is also to be granted to a permanent establishment in State E of an enterprise of State R (*cf.* paragraphs 49 to 54 of the Commentary on Article 24).

Commentary on Article 24

36. Replace paragraphs 7, 21 and 26 of the Commentary on Article 24 by the following:

> 7. To take the first of these two cases, if a State accords immunity from taxation to its own public bodies and services, this is justified because such bodies and services are integral parts of the State and at no time can their circumstances be comparable to those of the public bodies and services of the other State. Nevertheless, this reservation is not intended to apply to State corporations carrying on gainful undertakings. To the extent that these can be regarded as being on the same footing as private ~~industrial and commercial~~***business*** undertakings, the provisions of paragraph 1 will apply to them.
>
> 21. By the terms of the first sentence of paragraph 3, the taxation of a permanent establishment shall not be less favourably levied in the State concerned than the taxation levied on enterprises of that State carrying on the same activities. The purpose of this provision is to end all discrimination in the treatment of permanent establishments as compared with resident enterprises belonging to the same sector of activities, as regards taxes based on ~~industrial and commercial~~***business*** activities, and especially taxes on business profits.
>
> 26. As such measures are in furtherance of objectives directly related to the economic activity proper of the State concerned, it is right that the benefit of them should be extended to permanent establishments of enterprises of another State which has a double taxation convention with the first embodying the provisions of Article 24, once they have been accorded the right to engage in ~~industrial or commercial~~***business*** activity in that State, either under its legislation or under an international agreement (treaties of commerce, establishment conventions, etc.) concluded between the two States.

Restricting the Entitlement to Treaty Benefits

(adopted by the OECD Committee on Fiscal Affairs on 7 November 2002)

Notes. . . . . R(17)-24

1. INTRODUCTION

1. In April 1998, the Council of the OECD adopted the Report entitled *Harmful Tax Competition: an Emerging Global Issue* (the "1998 Report on harmful tax competition"). One of the issues for follow-up work identified in the Report was a possible restriction of the entitlement to treaty benefits.

2. This note is the result of the work done by the Committee on Fiscal Affairs on this issue.

2. NATURE OF THE WORK DONE BY THE COMMITTEE

3. Recommendation 9 of the 1998 Report on harmful tax competition read as follows:

> that countries consider including in their tax conventions provisions aimed at restricting the entitlement to treaty benefits for entities and income covered by measures constituting harmful tax practices and consider how the existing provisions of their tax conventions can be applied for the same purpose; that the Model Tax Convention be modified to include such provisions or clarifications as are needed in that respect.

4. Paragraphs 119 and 120 of the Report clarified what types of provisions were envisaged:

> 119. Various approaches have been used by countries to reduce that risk. In some cases, countries have been able to determine that the place of effective management of a subsidiary lies in the State of the parent company so as to make it a resident of that country either for domestic law or treaty purposes. In other cases, it has been possible to argue, on the basis of the facts and circumstances of the cases, that a subsidiary was managed by the parent company in such a way that the subsidiary had a permanent establishment in the country of residence of the parent company so as to be able to attribute profits of the subsidiary to that latter country. Another example involves denying companies with no real economic function treaty benefits because these companies are not considered as beneficial owner of certain income formally attributed to them. The Committee intends to continue to examine these and other approaches to the application of the existing provisions of the Model Tax Convention, with a view to recommending appropriate clarification to the Model Tax Convention.

> 120. There are, however, a number of additional provisions, such as limitation of benefits rules, which have been included in some tax treaties to specifically restrict access to their benefits. The Committee has also been reviewing these provisions with a view to propose changes

to the Model Tax Convention aimed at denying the tax treaty benefits to entities and income covered by practices constituting harmful tax competition. The Committee intends to continue its work in this area with a view to modify the Model Tax Convention or the Commentary so as to include such provisions that countries will be able to incorporate in their tax treaties.

5. Based on the preceding, the work that the Committee was asked to carry out in relation to a possible restriction of the entitlement to treaty benefits dealt with the following:

- using the concepts of place of effective management and permanent establishment to reduce benefits obtained under a tax convention;
- the possible inclusion in the Model of various types of provisions aimed at ensuring that income sheltered from taxation through regimes constituting harmful tax competition do not inappropriately get the benefits of tax conventions;
- possible ways of ensuring that, where a country that is a party to a tax convention introduces measures resulting in harmful tax competition after the conclusion of the tax convention, benefits of the convention are not inappropriately granted with respect to income covered by such measures;
- the clarification of the concept of "beneficial ownership".

6. During its work, the Committee also discussed the extent to which one possible approach to dealing with the issues described above might be through a narrowing of the concept of residence in Article 4 of the Model Tax Convention. It concluded that it would not be appropriate to make changes to Article 4 or the Commentary on that Article because:

- to do so could damage the position of persons who are legitimately entitled to treaty benefits; and
- other more effective approaches could be pursued to prevent treaty benefits claims by entities associated with regimes constituting harmful tax competition.

3. USE OF THE CONCEPTS OF PLACE OF EFFECTIVE MANAGEMENT AND PERMANENT ESTABLISHMENT

a) Changes adopted by the Committee

7. The Committee decided that the following changes should be made to the Commentary on Article 1 of the Model Tax Convention:

Add the following new paragraphs 10.1 and 10.2 to the Commentary on Article 1:

10.1 Also, in some cases, claims to treaty benefits by subsidiary companies, in particular companies established in tax havens or benefiting from harmful preferential regimes, may be refused where careful consideration of the facts and circumstances of a case shows that the place of effective management of a subsidiary does not lie in its alleged state of residence but, rather, lies in the state of residence of the parent company so as to make it a resident of that latter state for domestic law and treaty purposes (this will be relevant where the domestic law of a state uses the place of management of a legal person, or a similar criterion, to determine its residence).

10.2 Careful consideration of the facts and circumstances of a case may also show that a subsidiary was managed in the state of residence of its parent in such a way that the subsidiary had a permanent establishment (*e.g.* by having a place of management) in that state to which all or a substantial part of its profits were properly attributable.

b) Background

8. In some cases, countries have been able to determine, on the basis of the facts and circumstances of the cases, that the place of effective management of a subsidiary lies in the State of the parent company so as to make it a resident of that country either for domestic law or treaty purposes. In other cases, it has been possible to argue, on the basis of the facts and circumstances of the cases, that a subsidiary was managed by the parent company in such a way that the subsidiary had a permanent establishment in the country of residence of the parent company so as to be able to attribute profits of the subsidiary to that latter country.

9. Both of these approaches result in a reduction of the benefits that a taxpayer might otherwise claim under a tax convention. The Committee has considered these approaches and it emerged that some member countries have used them in practice to resist inappropriate treaty claims, as shown by the examples below which are based on the experience of one country.

The place of effective management of a company and thus its residence is located with its parent company

10. Company A is constituted under the law of Country A, a low tax jurisdiction, and is a resident of that country under its domestic tax law. All of the shares in A are owned by trust B which is constituted under the law of Country B, another low tax jurisdiction, and which is a resident of that country. Company A owns all of the shares of company C, which is a resident of Country C. The sole director of company C is Mr D, who is a resident of Country C as well. Mr D is directly and fully entitled to the property of trust B.

The income of company A consists of dividends from company C, interest on loans to company C and interest on bonds issued by a Country C bank. Investigations by the Country C tax administration showed that company A had no office or personnel of its own. All contacts with the bank concerning the bonds were conducted by Mr D. Later, a sale of all the shares and loans held by company A was negotiated and conducted by Mr D.

11. According to the Country C Supreme Court, in general it is to be assumed that the effective management of a company is exercised by its board of directors and that the place of residence of the company is congruent with the place where its board of directors exercises its duties. However, if judging from the circumstances it is to be assumed that the effective management of the company is exercised by some other person and not by the board of directors, then there may be ground to regard the place from which effective management is exercised by that other person as the place of residence of the company. In the case described above the Supreme Court concluded that company A was effectively managed in Country C by Mr D and thus the company was to be regarded as a resident of Country C, for the purposes of both Country C domestic tax law and the tax arrangement between Country C and Country A.

A place of management and thus a permanent establishment of a subsidiary is located with its parent company

12. Company X is constituted under the law of Country A and is a resident of that country according to its domestic tax law. Company X acts as a captive insurance company for a multinational group of enterprises. The top holding company of the group, company Y, is a resident of Country C. The main activities of the group are conducted from the offices of company Y. Investigations by the Country C tax administration showed the following facts. Company X employs one part-time director, who has little if any knowledge of the insurance business and two "local" staff members. It occupies space in an office building, the main user of which is another member of the group. The insurance contracts between company X and the members of the group follow standardised conditions set by company Y. These contracts are reinsured with independent insurance companies, through the intermediary of an insurance broker. The reinsurance contract is negotiated and concluded by personnel from company Y, following strategies set by company Y.

13. The Country C Court decided that, judging from the factual circumstances of the case, the place of effective management of company X was not located in Country C and company X was therefore not a resident of Country C. However, according to the Court, it was to be assumed that to a certain extent the daily management of company X was exercised at the office

of company Y. The Court was of the opinion that this extent was such that it exceeded the normal amount of influence that a parent company has on its subsidiary on account of its position as shareholder. The Court therefore concluded that to the extent of that daily management a permanent establishment of company X was located with company Y in Country C.

4. NEW PROVISIONS AIMED AT RESTRICTING THE BENEFITS OF TAX CONVENTIONS

a) Changes adopted by the Committee

14. The Committee discussed a proposal for amending the part of the Commentary on Article 1 that deals with the Improper Use of Tax Conventions. This led to the adoption of the following changes to that part of the Commentary:

Add the following paragraph 9.6 and replace paragraphs 10 to 21 of the Commentary on Article 1 by the following (changes to the existing text of the Commentary appear in ***bold italics*** *for additions and* ~~strikethrough~~ *for deletions):*

9.6 The potential application of general anti-abuse provisions does ***not mean that there is no need for the inclusion, in tax conventions, of specific provisions aimed at preventing particular forms of tax avoidance. Where specific avoidance techniques have been identified or where the use of such techniques is especially problematic, it will often be useful to add to the Convention provisions that focus directly on the relevant avoidance strategy. Also, this will be necessary where a State which adopts the view described in paragraph 9.2 above believes that its domestic law lacks the anti-avoidance rules or principles necessary to properly address such strategy.***

10. ***For instance, some forms of tax avoidance have already been expressly dealt with in the Convention, e.g.*** by the introduction of the concept of "beneficial owner" (in Articles 10, 11, and 12) and of special provisions ***such as paragraph 2 of Article 17 dealing with***~~for~~ so-called artiste-companies ~~(paragraph 2 of Article 17)~~. Such problems are also mentioned in the Commentaries on Article 10 (paragraphs 17 and 22), Article 11 (paragraph 12) and Article 12 (paragraph 7). ~~It may be appropriate for Contracting States to agree in bilateral negotiations that any relief from tax should not apply in certain cases, or to agree that the application of the provisions of domestic laws against tax avoidance should not be affected by the Convention.~~

11. ***A further example is provided by two particularly prevalent forms of improper use of the Convention which***~~Improper uses of the Convention~~ are

discussed in two reports from the Committee on Fiscal Affairs entitled "Double Taxation Conventions and the Use of Base Companies" and "Double Taxation Conventions and the Use of Conduit Companies".[1] As indicated in these reports, the concern expressed in paragraph 9 above has proved to be valid as there has been a growing tendency toward the use of conduit companies to obtain treaty benefits not intended by the Contracting States in their bilateral negotiations. This has led an increasing number of member countries to implement treaty provisions (both general and specific) to counter abuse and to preserve anti-avoidance legislation in their domestic laws.

12. ***The treaty provisions that have been designed to cover these and other forms of abuse take different forms. The following are examples derived from provisions that have been incorporated in bilateral conventions concluded by member countries.***~~Several solutions have been considered but, for the reasons set out in the above-mentioned reports, no definitive texts have been drafted, no strict recommendations as to the circumstances in which they should be applied made, and no exhaustive list of such possible counter-measures given. The texts quoted below are merely intended as suggested benchmarks~~. *These provide models* that treaty negotiators might consider when searching for a solution to specific cases. In referring to them there should be taken into account:

- the fact that these provisions are not mutually exclusive and that various provisions may be needed in order to address different concerns;
- the degree to which tax advantages may actually be obtained by a particular avoidance strategy ~~conduit companies~~;
- the legal context in both Contracting States and, in particular, the extent to which domestic law already provides an appropriate response to this avoidance strategy; and
- the extent to which *bona fide* economic activities might be unintentionally disqualified by such provisions.

Conduit company cases

13. ***Many countries have attempted to deal with the issue of conduit companies and various approaches have been designed for that purpose.*** One solution ~~A solution to the problem of conduit companies~~ would be to disallow treaty benefits to a company not owned, directly or indirectly, by residents of the State of which the company is a resident. For example, such a "look-through" provision might have the following wording:

> A company that is a resident of a Contracting State shall not be entitled to relief from taxation under this Convention with respect

to any item of income, gains or profits if it is owned or controlled directly or through one or more companies, wherever resident, by persons who are not residents of a Contracting State.

Contracting States wishing to adopt such a provision may also want, in their bilateral negotiations, to determine the criteria according to which a company would be considered as owned or controlled by non-residents.

14. The "look-through approach" ***underlying the above provision*** seems an adequate basis for treaties with countries that have no or very low taxation and where little substantive business activities would normally be carried on. Even in these cases it might be necessary to alter the provision or to substitute for it another one to safeguard *bona fide* business activities.

15. ~~Conduit situations can be created by the use of tax-exempt (or nearly tax-exempt) companies that may be distinguished by special legal characteristics. The improper use of tax treaties may then be avoided by denying the tax treaty benefits to these companies (the exclusion approach). The main cases are specific types of companies enjoying tax privileges in their State of residence giving them in fact a status similar to that of a non-resident. As such privileges are granted mostly to specific types of companies as defined in the commercial law or in the tax law of a country, the most radical solution would be to exclude such companies from the scope of the treaty. Another solution would be to insert a safeguarding clause such as the following:~~

~~No provision of the Convention conferring an exemption from, or reduction of, tax shall apply to income received or paid by a company as defined under Section ... of the ... Act, or under any similar provision enacted by ... after the signature of the Convention.~~

~~The scope of this provision could be limited by referring only to specific types of income, such as dividends, interest, capital gains, or directors' fees. Under such provisions companies of the type concerned would remain entitled to the protection offered under Article 24 (non-discrimination) and to the benefits of Article 25 (mutual agreement procedure) and they would be subject to the provisions of Article 26 (exchange of information).~~

16. ~~Exclusion provisions are clear and their application is simple, even though they may require administrative assistance in some instances. They are an important instrument by which a State that has created special privileges in its tax law may prevent those privileges from being~~

~~used in connection with the improper use of tax treaties concluded by that State.~~

15. ~~17.~~ General subject-to-tax provisions provide that treaty benefits in the State of source are granted only if the income in question is subject to tax in the State of residence. This corresponds basically to the aim of tax treaties, namely to avoid double taxation. For a number of reasons, however, the Model Convention does not recommend such a general provision. Whilst this seems adequate with respect to a normal international relationship, a subject-to-tax approach might well be adopted in a typical conduit situation. A safeguarding provision of this kind could have the following wording:

> Where income arising in a Contracting State is received by a company resident of the other Contracting State and one or more persons not resident in that other Contracting State
>
> *a)* have directly or indirectly or through one or more companies, wherever resident, a substantial interest in such company, in the form of a participation or otherwise, or
>
> *b)* exercise directly or indirectly, alone or together, the management or control of such company,
>
> any provision of this Convention conferring an exemption from, or a reduction of, tax shall apply only to income that is subject to tax in the last-mentioned State under the ordinary rules of its tax law.”

The concept of “substantial interest” may be further specified when drafting a bilateral convention. Contracting States may express it, for instance, as a percentage of the capital or of the voting rights of the company.

16. ~~18.~~ The subject-to-tax approach seems to have certain merits. It may be used in the case of States with a well-developed economic structure and a complex tax law. It will, however, be necessary to supplement this provision by inserting *bona fide* provisions in the treaty to provide for the necessary flexibility (*cf.* paragraph 19 below); moreover, such an approach does not offer adequate protection against advanced tax avoidance schemes such as “stepping-stone strategies”.

17. ~~19.~~ The approaches referred to above are in many ways unsatisfactory. They refer to the changing and complex tax laws of the Contracting States and not to the arrangements giving rise to the improper use of conventions. It has been suggested that the conduit problem be dealt with in a more straightforward way by inserting a provision that would single out cases of improper use with reference to

the conduit arrangements themselves (the channel approach). Such a provision might have the following wording:

> Where income arising in a Contracting State is received by a company that is a resident of the other Contracting State and one or more persons who are not residents of that other Contracting State
>
> *a)* have directly or indirectly or through one or more companies, wherever resident, a substantial interest in such company, in the form of a participation or otherwise, or
>
> *b)* exercise directly or indirectly, alone or together, the management or control of such company
>
> any provision of this Convention conferring an exemption from, or a reduction of, tax shall not apply if more than 50 per cent of such income is used to satisfy claims by such persons (including interest, royalties, development, advertising, initial and travel expenses, and depreciation of any kind of business assets including those on immaterial goods and processes)."

18. ~~20.~~ A provision of this kind appears to be the only effective way of combatting "stepping-stone" devices. It is found in bilateral treaties entered into by Switzerland and the United States and its principle also seems to underly the Swiss provisions against the improper use of tax treaties by certain types of Swiss companies. States that consider including a clause of this kind in their convention should bear in mind that it may cover normal business transactions and would therefore have to be supplemented by a *bona fide* clause.

19. ~~21.~~ The solutions described above are of a general nature and they need to be accompanied by specific provisions to ensure that treaty benefits will be granted in *bona fide* cases. Such provisions could have the following wording:

a) General bona fide provision

> "The foregoing provisions shall not apply where the company establishes that the principal purpose of the company, the conduct of its business and the acquisition or maintenance by it of the shareholding or other property from which the income in question is derived, are motivated by sound business reasons and do not have as primary purpose the obtaining of any benefits under this Convention."

b) Activity provision

> "The foregoing provisions shall not apply where the company is engaged in substantive business operations in the Contracting

State of which it is a resident and the relief from taxation claimed from the other Contracting State is with respect to income that is connected with such operations."

c) *Amount of tax provision*

"The foregoing provisions shall not apply where the reduction of tax claimed is not greater than the tax actually imposed by the Contracting State of which the company is a resident."

d) *Stock exchange provision*

"The foregoing provisions shall not apply to a company that is a resident of a Contracting State if the principal class of its shares is registered on an approved stock exchange in a Contracting State or if such company is wholly owned-directly or through one or more companies each of which is a resident of the first-mentioned State-by a company which is a resident of the first-mentioned State and the principal class of whose shares is so registered."

e) *Alternative relief provision*

"In cases where an anti-abuse clause refers to non-residents of a Contracting State, it could be provided that the term 'shall not be deemed to include residents of third States that have income tax conventions in force with the Contracting State from which relief from taxation is claimed and such conventions provide relief from taxation not less than the relief from taxation claimed under this Convention."

These provisions illustrate possible approaches. The specific wording of the provisions to be included in a particular treaty depends on the general approach taken in that treaty and should be determined on a bilateral basis. Also, where the competent authorities of the Contracting States have the power to apply discretionary provisions, it may be considered appropriate to include an additional rule that would give the competent authority of the source country the discretion to allow the benefits of the Convention to a resident of the other State even if the resident fails to pass any of the tests described above.

20. Whilst the preceding paragraphs identify different approaches to deal with conduit situations, each of them deals with a particular aspect of the problem commonly referred to as "treaty shopping". States wishing to address the issue in a comprehensive way may want to consider the following example of detailed limitation-of-benefits provisions aimed at preventing persons who are not resident of either Contracting States from accessing the benefits of a Convention through the use of an entity that would otherwise qualify as a resident of one of these States, keeping in

mind that adaptations may be necessary and that many States prefer other approaches to deal with treaty shopping:

1. Except as otherwise provided in this Article, a resident of a Contracting State who derives income from the other Contracting State shall be entitled to all the benefits of this Convention otherwise accorded to residents of a Contracting State only if such resident is a 'qualified person' as defined in paragraph 2 and meets the other conditions of this Convention for the obtaining of such benefits.

2. A resident of a Contracting State is a qualified person for a fiscal year only if such resident is either:

a) an individual;

b) a qualified governmental entity;

c) a company, if

i) the principal class of its shares is listed on a recognised stock exchange specified in subparagraph a) or b) of paragraph 6 and is regularly traded on one or more recognized stock exchanges, or

ii) at least 50 percent of the aggregate vote and value of the shares in the company is owned directly or indirectly by five or fewer companies entitled to benefits under subdivision i) of this subparagraph, provided that, in the case of indirect ownership, each intermediate owner is a resident of either Contracting State;

d) a charity or other tax-exempt entity, provided that, in the case of a pension trust or any other organization that is established exclusively to provide pension or other similar benefits, more than 50 percent of the person's beneficiaries, members or participants are individuals resident in either Contracting State; or

e) a person other than an individual, if:

i) on at least half the days of the fiscal year persons that are qualified persons by reason of subparagraph a), b) or d) or subdivision c) i) of this paragraph own, directly or indirectly, at least 50 percent of the aggregate vote and value of the shares or other beneficial interests in the person, and

ii) less than 50 percent of the person's gross income for the taxable year is paid or accrued, directly or indirectly, to persons who are not residents of either Contracting State in the form of payments that are deductible for purposes of

the taxes covered by this Convention in the person's State of residence (but not including arm's length payments in the ordinary course of business for services or tangible property and payments in respect of financial obligations to a bank, provided that where such a bank is not a resident of a Contracting State such payment is attributable to a permanent establishment of that bank located in one of the Contracting States).

3. a) A resident of a Contracting State will be entitled to benefits of the Convention with respect to an item of income, derived from the other State, regardless of whether the resident is a qualified person, if the resident is actively carrying on business in the first-mentioned State (other than the business of making or managing investments for the resident's own account, unless these activities are banking, insurance or securities activities carried on by a bank, insurance company or registered securities dealer), the income derived from the other Contracting State is derived in connection with, or is incidental to, that business and that resident satisfies the other conditions of this Convention for the obtaining of such benefits.

b) If the resident or any of its associated enterprises carries on a business activity in the other Contracting State which gives rise to an item of income, subparagraph a) shall apply to such item only if the business activity in the first-mentioned State is substantial in relation to business carried on in the other State. Whether a business activity is substantial for purposes of this paragraph will be determined based on all the facts and circumstances.

c) In determining whether a person is actively carrying on business in a Contracting State under subparagraph a), activities conducted by a partnership in which that person is a partner and activities conducted by persons connected to such person shall be deemed to be conducted by such person. A person shall be connected to another if one possesses at least 50 percent of the beneficial interest in the other (or, in the case of a company, at least 50 percent of the aggregate vote and value of the company's shares) or another person possesses, directly or indirectly, at least 50 percent of the beneficial interest (or, in the case of a company, at least 50 percent of the aggregate vote and value of the company's shares) in each person. In any case, a person shall be considered to be connected to another if, based on all the facts

and circumstances, one has control of the other or both are under the control of the same person or persons.

4. Notwithstanding the preceding provisions of this Article, if a company that is a resident of a Contracting State, or a company that controls such a company, has outstanding a class of shares

a) which is subject to terms or other arrangements which entitle its holders to a portion of the income of the company derived from the other Contracting State that is larger than the portion such holders would receive absent such terms or arrangements ('the disproportionate part of the income'); and

b) 50 percent or more of the voting power and value of which is owned by persons who are not qualified persons

the benefits of this Convention shall not apply to the disproportionate part of the income.

5. A resident of a Contracting State that is neither a qualified person pursuant to the provisions of paragraph 2 or entitled to benefits under paragraph 3 or 4 shall, nevertheless, be granted benefits of the Convention if the competent authority of that other Contracting State determines that the establishment, acquisition or maintenance of such person and the conduct of its operations did not have as one of its principal purposes the obtaining of benefits under the Convention.

6. For the purposes of this Article the term 'recognized stock exchange' means:

a) in State A ....;

b) in State B ....; and

c) any other stock exchange which the competent authorities agree to recognize for the purposes of this Article.

Provisions which are aimed at entities benefiting from preferential tax regimes

21. [OLD 15] ***Specific types of companies enjoying tax privileges in their State of residence facilitate conduit arrangements and raise the issue of harmful tax practices.***~~ Conduit situations can be created by the use of~~***Where*** tax-exempt (or nearly tax-exempt) companies ~~that~~ may be distinguished by special legal characteristics***, the***~~.The~~ improper use of tax treaties may ~~then~~ be avoided by denying the tax treaty benefits to these companies (the exclusion approach). ~~The main cases are specific types of companies enjoying tax privileges in their State of residence giving them in fact a status similar to that of a non-resident.~~ As such privileges are granted mostly to specific types of companies as

defined in the commercial law or in the tax law of a country, the most radical solution would be to exclude such companies from the scope of the treaty. Another solution would be to insert a safeguarding clause ~~such as the following~~***which would apply to the income received or paid by such companies and which could be drafted along the following lines:***

> No provision of the Convention conferring an exemption from, or reduction of, tax shall apply to income received or paid by a company as defined under Section ... of the ... Act, or under any similar provision enacted by ... after the signature of the Convention.

The scope of this provision could be limited by referring only to specific types of income, such as dividends, interest, capital gains, or directors' fees. Under such provisions companies of the type concerned would remain entitled to the protection offered under Article 24 (non-discrimination) and to the benefits of Article 25 (mutual agreement procedure) and they would be subject to the provisions of Article 26 (exchange of information).

21.1 [OLD 16]Exclusion provisions are clear and their application is simple, even though they may require administrative assistance in some instances. They are an important instrument by which a State that has created special privileges in its tax law may prevent those privileges from being used in connection with the improper use of tax treaties concluded by that State.

21.2 Where it is not possible or appropriate to identify the companies enjoying tax privileges by reference to their special legal characteristics, a more general formulation will be necessary. The following provision aims at denying the benefits of the Convention to entities which would otherwise qualify as residents of a Contracting State but which enjoy, in that State, a preferential tax regime restricted to foreign-held entities (i.e. not available to entities that belong to residents of that State):

> ***Any company, trust or partnership that is a resident of a Contracting State and is beneficially owned or controlled directly or indirectly by one or more persons who are not residents of that State shall not be entitled to the benefits of this Convention if the amount of the tax imposed on the income or capital of the company, trust or partnership by that State (after taking into account any reduction or offset of the amount of tax in any manner, including a refund, reimbursement, contribution, credit or allowance to the company, trust or partnership, or to any other person) is substantially lower than the amount that would be imposed by that State if all of the shares of the capital stock of the company or all of the interests in the trust or partnership, as the***

case may be, were beneficially owned by one or more residents of that State.

Provisions which are aimed at particular types of income

21.3 The following provision aims at denying the benefits of the Convention with respect to income that is subject to low or no tax under a preferential tax regime:

1. The benefits of this Convention shall not apply to income which may, in accordance with the other provisions of the Convention, be taxed in a Contracting State and which is derived from activities the performance of which do not require substantial presence in that State, including :

- *a) such activities involving banking, shipping, financing, ~~or~~ insurance or electronic commerce activities; or*
- *b) activities involving headquarter or coordination centre or similar arrangements providing company or group administration, financing or other support; or*
- *c) activities which give rise to passive income, such as dividends, interest and royalties*

where, under the laws or administrative practices of that State, such income is preferentially taxed and, in relation thereto, information is accorded confidential treatment that prevents the effective exchange of information.

2. For the purposes of paragraph 1, income is preferentially taxed in a Contracting State if, other than by reason of the preceding Articles of this Agreement, an item of income:

- *a) is exempt from tax; or*
- *b) is taxable in the hands of a taxpayer but that is subject to a rate of tax that is lower than the rate applicable to an equivalent item that is taxable in the hands of similar taxpayers who are residents of that State; or*
- *c) benefits from a credit, rebate or other concession or benefit that is provided directly or indirectly in relation to that item of income, other than a credit for foreign tax paid.*

Anti-abuse rules dealing with source taxation of specific types of income

21.4 The following provision has the effect of denying the benefits of specific Articles of the convention that restrict source taxation where transactions have been entered into for the main purpose of obtaining these benefits. The Articles concerned are 10, 11, 12 and 21; the provision should

be slightly modified as indicated below to deal with the specific type of income covered by each of these Articles:

> ***The provisions of this Article shall not apply if it was the main purpose or one of the main purposes of any person concerned with the creation or assignment of the [Article 10: 'shares or other rights'; Article 11: 'debt-claim'; Articles 12 and 21: 'rights'] in respect of which the [Article 10: 'dividend'; Article 11: 'interest'; Articles 12 'royalties' and Article 21: 'income'] is paid to take advantage of this Article by means of that creation or assignment.***

Provisions which are aimed at preferential regimes introduced after the signature of the convention

21.5 States may wish to prevent abuses of their conventions involving provisions introduced by a Contracting State after the signature of the Convention. The following provision aims to protect a Contracting State from having to give treaty benefits with respect to income benefiting from a special regime for certain offshore income introduced after the signature of the treaty:

> ***The benefits of Articles 6 to 22 of this Convention shall not accrue to persons entitled to any special tax benefit under:***
>
> ***a) a law of either one of the States which has been identified in an exchange of notes between the States; or***
>
> ***b) any substantially similar law subsequently enacted.***

b) Background

15. The Committee has examined what new types of provisions for the Model Tax Convention could be appropriate to ensure that income sheltered from taxation through harmful tax regimes would not inappropriately get the benefits of tax conventions.

16. As part of that work, several possible provisions were put forward. Several delegates advocated the inclusion of a comprehensive limitation of benefits provision. Other delegates opposed the inclusion of such a provision favouring an Article by Article approach to those provisions most likely to be abused. It was decided that these two approaches need not be alternatives and that both could be included, complementing each other in a Convention. It was also agreed that the relevant part of the Commentary on Article 1 should be redrafted to include some of the provisions put forward during the work on this issue.

5. RESTRICTION OF THE BENEFITS OF TAX CONVENTIONS AFTER THE INTRODUCTION OF A NEW REGIME

17. Another issue examined by the Committee was how to ensure that, where a country that is a party to a tax convention introduces measures resulting in harmful tax competition after the conclusion of the tax convention, benefits of the convention are not inappropriately granted with respect to income covered by such measures. Consideration of the provisions put forward by delegates in relation to the previous issue revealed that most would be effective in dealing both with regimes existing at the time of entry into effect of a convention and new regimes introduced later. However such provisions might not be included in a convention where no harmful preferential regime existed at the time of conclusion of the convention.

a) Changes adopted by the Committee

18. The Committee discussed the possibility of including in the Convention a so-called "switch-over clause" in order to deal with harmful preferential regimes introduced after the signature of a convention.

19. During that discussion, the Committee debated the merits of such a clause and examined a proposal for including such a provision in Article 23 A. After discussion, it was agreed that the proposed provision should not be included in Article 23 A but that the Commentary could include the suggestion to adopt such a clause and could provide an example.

20. The Committee therefore adopted the following change to be made to the Commentary on Articles 23 A and 23 B:

Add the following paragraph 31.1 to the Commentaries on Articles 23 A and 23 B:

31.1 One example where paragraph 2 could be so amended is where a State that generally adopts the exemption method considers that that method should not apply to items of income that benefit from a preferential tax treatment in the other State by reason of a tax measure that has been introduced in that State after the date of signature of the Convention. In order to include these items of income, paragraph 2 could be amended as follows:

2. Where a resident of a Contracting State derives an item of income which

a) in accordance with the provisions of Articles 10 and 11, may be taxed in the other Contracting State, or

b) in accordance with the provisions of this Convention, may be taxed in the other Contracting State but which benefits

from a preferential tax treatment in that other State by reason of a tax measure

i) that has been introduced in the other Contracting State after the date of signature of the Convention, and

ii) in respect of which that State has notified the competent authorities of the other Contracting State, before the item of income is so derived and after consultation with that other State, that this paragraph shall apply,

the first-mentioned State shall allow as a deduction from the tax on the income of that resident an amount equal to the tax paid in that other State. Such deduction shall not, however, exceed that part of the tax, as computed before the deduction is given, which is attributable to such item of income derived from that other State.

6. CLARIFICATION OF THE CONCEPT OF "BENEFICIAL OWNERSHIP"

a) Changes adopted by the Committee

21. The Committee adopted the following changes aimed at clarifying the meaning of "beneficial ownership" in the Commentary on Articles 10, 11 and 12:

Replace paragraph 12 of the Commentary on Article 10 with the following new paragraphs (changes to the existing text of the Commentary appear in ***bold italics*** *for additions and* ~~strikethrough~~ *for deletions):*

12. The requirement of beneficial ownership was introduced in paragraph 2 of Article 10 to clarify the meaning of the words 'paid...to a resident' as they are used in paragraph 1 of the Article. It makes plain that the State of source is not obliged to give up taxing rights over dividend income merely because that income was immediately received by a resident of a State with which the State of source had concluded a convention. The term 'beneficial owner' is not used in a narrow technical sense, rather, it should be understood in its context and in light of the object and purposes of the Convention, including avoiding double taxation and the prevention of fiscal evasion and avoidance.

12.1 Where an item of income is received by a resident of a Contracting State acting in the capacity of agent or nominee it would be inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption merely on account of the status of the immediate recipient of the income as a resident of the other Contracting State. The

immediate recipient of the income in this situation qualifies as a resident but no potential double taxation arises as a consequence of that status since the recipient is not treated as the owner of the income for tax purposes in the State of residence. It would be equally inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption where a resident of a Contracting State, otherwise than through an agency or nominee relationship, simply acts as a conduit for another person who in fact receives the benefit of the income concerned. For these reasons, the report from the Committee on Fiscal Affairs entitled 'Double Taxation Conventions and the Use of Conduit Companies'[2] concludes that a conduit company cannot normally be regarded as the beneficial owner if, though the formal owner, it has, as a practical matter, very narrow powers which render it, in relation to the income concerned, a mere fiduciary or administrator acting on account of the interested parties.

12.2 ~~Under paragraph 2,~~ ***Subject to other conditions imposed by the Article,*** the limitation of tax in the State of source ***remains***~~is not~~ available when an intermediary, such as an agent or nominee ***located in a Contracting State or in a third State,*** is interposed between the beneficiary and the payer ***but the beneficial owner is a resident of the other Contracting State.*** (The text of the Model was amended in 1995 to clarify this point, which has been the consistent position of all member countries). States which wish to make this more explicit are free to do so during bilateral negotiations.

Replace paragraph 8 of the Commentary on Article 11 with the following new paragraphs:

8. ***The requirement of beneficial ownership was introduced in paragraph 2 of Article 11 to clarify the meaning of the words 'paid to a resident' as they are used in paragraph 1 of the Article. It makes plain that the State of source is not obliged to give up taxing rights over interest income merely because that income was immediately received by a resident of a State with which the State of source had concluded a convention. The term 'beneficial owner' is not used in a narrow technical sense, rather, it should be understood in its context and in light of the object and purposes of the Convention, including avoiding double taxation and the prevention of fiscal evasion and avoidance.***

8.1 Relief or exemption in respect of an item of income is granted by the State of source to a resident of the other Contracting State to avoid in whole or in part the double taxation that would otherwise arise from the concurrent taxation of that income by the State of residence. Where an item of income is received by a resident of a Contracting State acting in the capacity of agent or nominee it would be inconsistent with the object and

purpose of the Convention for the State of source to grant relief or exemption merely on account of the status of the immediate recipient of the income as a resident of the other Contracting State. The immediate recipient of the income in this situation qualifies as a resident but no potential double taxation arises as a consequence of that status since the recipient is not treated as the owner of the income for tax purposes in the State of residence. It would be equally inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption where a resident of a Contracting State, otherwise than through an agency or nominee relationship, simply acts as a conduit for another person who in fact receives the benefit of the income concerned. For these reasons, the report from the Committee on Fiscal Affairs entitled 'Double Taxation Conventions and the Use of Conduit Companies'[3] concludes that a conduit company cannot normally be regarded as the beneficial owner if, though the formal owner, it has, as a practical matter, very narrow powers which render it, in relation to the income concerned, a mere fiduciary or administrator acting on account of the interested parties.

8.2 ~~Under paragraph 2,~~***Subject to other conditions imposed by the Article,*** the limitation of tax in the State of source remains~~is not~~ available when an intermediary, such as an agent or nominee *located in a Contracting State or in a third State,* is interposed between the beneficiary and the payer *but the beneficial owner is a resident of the other Contracting State*. (The text of the Model was amended in 1995 to clarify this point, which has been the consistent position of all member countries). States which wish to make this more explicit are free to do so during bilateral negotiations.

Replace paragraph 4 of the Commentary on Article 12 with the following new paragraphs:

4. ***The requirement of beneficial ownership was introduced in paragraph 1 of Article 12 to clarify how the Article applies in relation to payments made to intermediaries. It makes plain that the State of source is not obliged to give up taxing rights over royalty income merely because that income was immediately received by a resident of a State with which the State of source had concluded a convention. The term 'beneficial owner' is not used in a narrow technical sense, rather, it should be understood in its context and in light of the object and purposes of the Convention, including avoiding double taxation and the prevention of fiscal evasion and avoidance.***

4.1 Relief or exemption in respect of an item of income is granted by the State of source to a resident of the other Contracting State to avoid in whole or in part the double taxation that would otherwise arise from the

concurrent taxation of that income by the State of residence. Where an item of income is received by a resident of a Contracting State acting in the capacity of agent or nominee it would be inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption merely on account of the status of the immediate recipient of the income as a resident of the other Contracting State. The immediate recipient of the income in this situation qualifies as a resident but no potential double taxation arises as a consequence of that status since the recipient is not treated as the owner of the income for tax purposes in the State of residence. It would be equally inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption where a resident of a Contracting State, otherwise than through an agency or nominee relationship, simply acts as a conduit for another person who in fact receives the benefit of the income concerned. For these reasons, the report from the Committee on Fiscal Affairs entitled 'Double Taxation Conventions and the Use of Conduit Companies'[4] concludes that a conduit company cannot normally be regarded as the beneficial owner if, though the formal owner, it has, as a practical matter, very narrow powers which render it, in relation to the income concerned, a mere fiduciary or administrator acting on account of the interested parties.

4.2 ~~Under paragraph 1~~***Subject to other conditions imposed by the Article, the limitation of***~~exemption from~~ tax in the State of source ***remains***~~is not~~ available when an intermediary, such as an agent or nominee, is interposed between the beneficiary and the payer, ~~unless~~ ***in those cases where*** the beneficial owner is a resident of the other Contracting State. (The text of the Model was amended in 1995 to clarify this point, which has been the consistent position of all member countries). States which wish to make this more explicit are free to do so during bilateral negotiations.

b) Background

22. The Committee discussed various options concerning the clarification of the concept of "beneficial ownership". Some delegates noted that the beneficial ownership test very much depended on the facts and circumstances of the individual case and that it was therefore difficult to develop a generally applicable definition of the concept. Most delegates still took the view that it would be useful to further clarify the concept. It was noted that any addition to the Commentary had to be drafted in a neutral way so as to avoid inadvertent limitation of the concept.

Meaning of beneficial owner

23. The Model Convention does not provide a definition of "beneficial owner". The Commentary indicates that an intermediary, such as an agent or nominee, is not the beneficial owner, but otherwise does not elaborate on the meaning of the term. In the absence of more extensive clarification the concept of beneficial ownership presents several difficulties of interpretation and application. While it is obvious that the use of the concept excludes bare legal ownership as the criterion for determining availability of treaty benefits it is less apparent what is intended to be the salient connection with a stream of income in a case where different interests in the income are held by diverse hands who might each be considered, as a matter of general law, to possess some attributes of ownership.

Report on the use of conduit companies

24. Paragraph 14 *b)* of the 1987 report from the Committee on Fiscal Affairs entitled "Double Taxation Conventions and the Use of Conduit Companies"[5] discussed the application of the requirement of beneficial ownership in abuse cases:

> The OECD has incorporated in its revised 1977 Model provisions precluding in certain cases persons not entitled to a treaty from obtaining its benefits through a 'conduit company'.
>
> [...]
>
> b) Articles 10 to 12 of the OECD Model deny the limitation of tax in the State of source on dividends, interest and royalties if the conduit company is not its 'beneficial owner'. Thus the limitation is not available when, economically, it would benefit a person not entitled to it who interposed the conduit company as an intermediary between himself and the payer of the income (paragraphs 12, 8 and 4 of the Commentary to Articles 10, 11 and 12 respectively). The Commentaries mention the case of a nominee or agent. The provisions would, however, apply also to other cases where a person enters into contracts or takes over obligations under which he has a similar function to those of a nominee or an agent. Thus a conduit company can normally not be regarded as the beneficial owner if, though the formal owner of certain assets, it has very narrow powers which render it a mere fiduciary or an administrator acting on account of the interested parties (most likely the shareholders of the conduit company). In practice, however, it will usually be difficult for the country of source to show that the conduit company is not the beneficial owner. The fact that its main function is to hold assets or rights is not itself sufficient to categorise it as a mere intermediary,

although this may indicate that further examination is necessary. This examination will in any case be highly burdensome for the country of source and not even the country of residence of the conduit company may have the necessary information regarding the shareholders of the conduit company, the company's relationships to the shareholders or other interested parties or the decision-making process of the conduit company. So even an exchange of information between the country of source and the country of the conduit company may not solve the problem. It is apparently in view of these difficulties that the Commentaries on the 1977 OECD Model mentioned the possibility of defining more specifically during bilateral negotiations the treatment that should be applicable to such companies (*cf.* paragraph 22 of the Commentary on Article 10).

1. INTRODUCTION

1. In January 1999, as a follow-up to the November 1998 Ottawa conference entitled A Borderless World – Realising the Potential of Electronic Commerce, the Committee on Fiscal Affairs set up a Technical Advisory Group (TAG) on Treaty Characterisation Issues arising from E-Commerce with the general mandate "to examine the characterisation of various types of electronic commerce payments under tax conventions with a view to providing the necessary clarifications in the Commentary." That Group was composed of business representatives and tax officials from OECD and non-OECD countries.

2. The final report of the TAG was released on 1 February 2001.[1] The report described the various treaty characterisation issues that were identified by the Group and presented the views of the Group concerning these issues; it also included an analysis of various categories of typical e-commerce transactions. The report included the recommendation that the OECD Working Party No. 1 on Tax Conventions and Related Questions "… issue a document clarifying, along the lines of section 3 of this report, how the various tax treaty characterisation issues arising from e-commerce should be solved…" and invited the Working Party "…to take account of the suggestions for changes to the Commentary of the OECD Model Tax Convention which are included in this report."

3. The Committee on Fiscal Affairs, through its Working Party No. 1, subsequently examined the TAG report in detail. It found the conclusions and suggestions of the TAG highly persuasive. It therefore decided to follow the TAG recommendation and adopted[2] the present report, which largely reproduces the TAG report and generally adopts the TAG's suggestions for changes to the Commentary on Article 12.

4. The Committee expresses its thanks to the members of the TAG for their valuable work and their contribution to clarifying how existing tax treaties apply in the context of e-commerce.

2. OVERVIEW OF THE REPORT

5. This report is divided as follows:

- Sections 1 to 4 include a description of the various treaty characterisation issues that may arise in electronic commerce together with the conclusions of the Committee on how to address these issues;
- Annex 1 reproduces all the changes to the Commentaries on the Model Tax Convention that are put forward in this report;

– Annex 2 includes an illustrative list of typical e-commerce transactions with the conclusions of the Committee as to how payments arising from these transactions should be characterised for tax treaty purposes (this list is similar to the one included in Annex 2 of the TAG report);

6. Throughout this report, it is generally assumed that the payments that are referred to are received in the course of carrying on a business, whether or not the payers are themselves carrying on business. It follows that all these payments are capable of falling within Article 7 of the OECD Model Tax Convention, which deals with business profits. Some payments, however, may be taken out of Article 7 by the rule of paragraph 7 of Article 7, which gives priority to any other Article that expressly deals with the specific type of income concerned. One such Article is Article 12, dealing with royalties. For these reasons, the payments referred to in this report should not be considered to fall within Article 21, which deals with other income.

3. BUSINESS PROFITS AND ROYALTIES

7. The definition of royalties currently found in paragraph 2 of Article 12 of the OECD Model Tax Convention reads as follows:

> The term 'royalties' as used in this Article means payments of any kind received as a consideration for the use of, or the right to use, any copyright of literary, artistic or scientific work including cinematograph films, any patent, trade mark, design or model, plan, secret formula or process, or for information concerning industrial, commercial or scientific experience.

8. In the OECD 1977 Double Taxation Convention, that definition also included "payments […] for the use, or the right to use, industrial, commercial or scientific equipment" and some bilateral conventions still include this previous definition of royalties.

9. This section analyses classification issues arising from the possible application of various elements of these two definitions to payments made in e-commerce transactions. It also examines classification issues arising from alternative treaty provisions which deal with the provision of services or technical fees.

a) *Business profits and payments for the use of, or the right to use, a copyright*

Analysis and conclusions

10. One of the most important characterisation issues arising from e-commerce is the distinction between business profits and the part of the treaty definition of "royalties" that deals with payments for the use of, or the right to use, a copyright. The conclusions below on how that issue should be addressed are fully consistent with the position already expressed in paragraphs 14 to 14.2 of the Commentary on Article 12 as regards software payments.

11. Since the definition of royalties applies to "payments for" any of the various items listed in that definition, the main question to be addressed in any given transaction is the identification of that for which the payment is made. Under the relevant legislation of some countries, transactions which permit the customer to electronically download computer programs or other digital content may give rise to use of copyright by the customer, *e.g.* because a right to make one or more copies of the digital content is granted under the contract. Where the essential consideration is for something other than the use of, or right to use, rights in the copyright (such as to acquire other types of contractual rights, data or services), and the use of copyright is limited to such rights as are required to enable downloading, storage and operation on the customer's computer, network or other storage, performance or display device, such use of copyright should not affect the analysis of the character of the payment for treaty purposes. This would be the case, for instance, where a payment is made by a person for the downloading and the operation of a copy of a computer program. Whilst electronic downloading of the program may or may not constitute the use of a copyright by the user (as opposed to by the provider) depending on the relevant copyright law and contractual arrangements, that possible use of a copyright is not that for which the payment is essentially made.

12. In the case of transactions that permit the customer to electronically download digital products (such as software, images, sounds or text), the payment is made to acquire data transmitted in the form of a digital signal for the own use or enjoyment of the acquiror.[3] This constitutes that for which the payment is essentially made. To the extent that the act of copying the digital signal onto the customer's hard disk or other non-temporary media (including transfers to other storage, performance or display devices) constitutes the use of a copyright by the customer under the relevant law and contractual arrangements, this is merely an incidental part of the process of capturing and storing the digital signal. This incidental part is not important for

classification purposes because it does not correspond to the essential consideration for the payment (*i.e.* to acquire data transmitted in the form of a digital signal), which is the determining factor for the purposes of the treaty definition of royalties.

Changes to the Commentary

13. Based on that analysis, the Committee concluded that the following changes should be made to the Commentary on Article 12 of the OECD Model Tax Convention:

Add the following paragraphs 17.1 to 17.4 immediately after paragraph 17 of the Commentary on Article 12:

17.1 The principles expressed above as regards software payments are also applicable as regards transactions concerning other types of digital products such as images, sounds or text. The development of electronic commerce has multiplied the number of such transactions. In deciding whether or not payments arising in these transactions constitute royalties, the main question to be addressed is the identification of that for which the payment is essentially made.

17.2 Under the relevant legislation of some countries, transactions which permit the customer to electronically download digital products may give rise to use of copyright by the customer, *e.g.* because a right to make one or more copies of the digital content is granted under the contract. Where the consideration is essentially for something other than for the use of, or right to use, rights in the copyright (such as to acquire other types of contractual rights, data or services), and the use of copyright is limited to such rights as are required to enable downloading, storage and operation on the customer's computer, network or other storage, performance or display device, such use of copyright should not affect the analysis of the character of the payment for purposes of applying the definition of 'royalties'.

17.3 This is the case for transactions that permit the customer (which may be an enterprise) to electronically download digital products (such as software, images, sounds or text) for that customer's own use or enjoyment. In these transactions, the payment is essentially for the acquisition of data transmitted in the form of a digital signal and therefore does not constitute royalties but falls within Article 7 or Article 13, as the case may be. To the extent that the act of copying the digital signal onto the customer's hard disk or other non-temporary media involves the use of a copyright by the customer under the relevant law and contractual arrangements, such copying is merely the means by which the digital signal is captured and stored. This use of copyright is

not important for classification purposes because it does not correspond to what the payment is essentially in consideration for (*i.e.* to acquire data transmitted in the form of a digital signal), which is the determining factor for the purposes of the definition of royalties. There also would be no basis to classify such transactions as 'royalties' if, under the relevant law and contractual arrangements, the creation of a copy is regarded as a use of copyright by the provider rather than by the customer.

17.4 By contrast, transactions where the essential consideration for the payment is the granting of the right to use a copyright in a digital product that is electronically downloaded for that purpose will give rise to royalties. This would be the case, for example, of a book publisher who would pay to acquire the right to reproduce a copyrighted picture that it would electronically download for the purposes of including it on the cover of a book that it is producing. In this transaction, the essential consideration for the payment is the acquisition of rights to use the copyright in the digital product, *i.e.* the right to reproduce and distribute the picture, and not merely for the acquisition of the digital content.

b) Business profits and payments for know-how

Analysis and conclusions

14. Whilst e-commerce transactions resulting in know-how payments are relatively rare, in some transactions it is necessary to distinguish whether the payment is in consideration for the provision of services or the provision of know-how (*i.e.* information concerning industrial, commercial or scientific experience).

15. Paragraph 11 of the Commentary on Article 12 refers to the following key elements to identify transactions for the provision of know-how:

- according to the ANBPPI *[Association des Bureaux pour la Protection de la Propriété Industrielle]*, know-how is "undivulged technical information that is necessary for the industrial reproduction of a product or process, directly and under the same conditions; inasmuch as it is derived from experience, know-how represents what a manufacturer cannot know from mere examination of the product and mere knowledge of the progress of technique";
- "In the know-how contract, one of the parties agrees to impart to the other, so that he can use them for his own account, his special knowledge and experience which remain unrevealed to the public";
- in the know-how contract "the grantor is not required to play any part himself in the application of the formula ... and ... does not guarantee the results thereof";

- the provision of know-how must be distinguished from the "provision of services, in which one of the parties undertakes to use the customary skills of his calling to execute work himself for the other party".

16. The paragraph also includes the following examples of payments which should not be considered to be received as consideration for the provision of know-how but rather, for the provision of services:

- payments obtained as consideration for after-sales service;
- payments for services rendered by a seller to the purchaser under a guarantee;
- payments for pure technical assistance; and
- payments for an opinion given by an engineer, an advocate or an accountant.

17. Applying these criteria and examples to e-commerce transactions, the Committee concluded that, for instance, online advice, communications with technicians and using the trouble-shooting database, would clearly involve actual services being performed on demand rather than the provision of know-how.

18. The distinction between payments for services rendered and payments for the supply of know-how may sometimes raise practical difficulties. Countries have used various criteria to solve these difficulties and the following are examples of criteria developed for that purpose:

- Typically, under a contract for the supply of know-how:
  a) a "product" (*i.e.* knowledge, information, technique, formula, skills, process, plan, etc.) which has already been created or developed or is already in existence is transferred;

  b) the product which is the subject of the contract is transferred for use by the buyer (*i.e.* it is supplied); and

  c) except in the case of a disposition where the seller divests himself completely of any further interest in the product, the property in the product remains with the seller. All that is obtained by the buyer is the right to use the product. Subject to the terms of the contract, the seller retains the right to use the product himself and to transfer it to others.
- By contrast, in a contract involving the performance of services, typically:
  d) the contractor undertakes to perform services which will result in the creation, development or the bringing into existence of a product (which may or may not be know-how);

e) in the course of developing a product, the contractor would apply existing knowledge, skill and expertise – there is not a transfer (*i.e.* supply) of know-how from the contractor to the buyer as such but a use by the contractor of his knowledge for his own purposes; and

f) the product created as a result of the services belongs to the buyer for him to use without having to obtain any further rights in respect of the product. However, in the course of rendering services the contractor would, in most cases, also produce as a by-product a work (*e.g.* plan, design, specification, report, etc., which could contain knowledge, etc. not otherwise known to the buyer and which may or may not be protected by patents, etc.) in which copyright would subsist. Unless specifically agreed otherwise, the contractor is the owner of such copyright and the buyer or any other person is, by law, precluded from using the property in which the copyright subsists for any purpose other than the purpose for which it was originally designed without first obtaining the approval of the contractor. This would not alter the nature of the contract which would remain one for the performance of services.

– Another factor is the incidence of cost, *i.e.* both the level and the nature of the expenditure incurred by the seller:

g) in most cases involving the supply of know-how which is already in existence there would appear to be very little more which needs to be done by the supplier other than to copy existing material. On the other hand, a contract for the performance of services would, in the majority of cases, involve a very much greater level of expenditure.

h) a contract for the performance of services would, depending on the nature of the services to be rendered, involve the contractor in such items of expenditure as salaries and wages to employees engaged in researching, designing, testing, drawing and other associated activities, payments to sub-contractors for the performance of similar services, etc

– These factors all point to the one main distinctive feature of know-how – that it is an asset and, as such, it is something which is already in existence and is not something brought into being in pursuance of the particular contract.

19. As regards the particular case of a contract involving the provision, by the supplier, of information concerning computer programming, the Committee concluded that, as a general rule, the payment will only be considered to be made in consideration for the provision of such information so as to constitute know-how where it is made to acquire information constituting ideas and principles underlying the program, such as logic,

algorithms or programming languages or techniques, where this information is provided under the condition that the customer not disclose it without authorisation and where it is subject to any available trade secret protection.

Changes to the Commentary

20. The Committee considered that it would be useful to provide greater guidance in the Commentary, on the basis of the above criteria and factors, on the distinction to be made between payments for the provision of know-how and payments for the provisions of services. It therefore concluded that the following changes should be made to the Commentary on Article 12 of the OECD Model Tax Convention:

Replace paragraph 11 of the Commentary on Article 12 by the following paragraphs 11 to 11.5 (additions to the existing text of paragraph 11 appear in ***bold italics****):*

11. In classifying as royalties payments received as consideration for information concerning industrial, commercial or scientific experience, paragraph 2 alludes to the concept of "know-how". Various specialist bodies and authors have formulated definitions of know-how which do not differ intrinsically. One such definition, given by the '*Association des Bureaux pour la Protection de la Propriété Industrielle*' (ANBPPI), states that "know-how is all the undivulged technical information, whether capable of being patented or not, that is necessary for the industrial reproduction of a product or process, directly and under the same conditions; inasmuch as it is derived from experience, know-how represents what a manufacturer cannot know from mere examination of the product and mere knowledge of the progress of technique".

11.1 In the know-how contract, one of the parties agrees to impart to the other, so that he can use them for his own account, his special knowledge and experience which remain unrevealed to the public. It is recognised that the grantor is not required to play any part himself in the application of the formulas granted to the licensee and that he does not guarantee the result thereof.

11.2 This type of contract thus differs from contracts for the provision of services, in which one of the parties undertakes to use the customary skills of his calling to execute work himself for the other party. ***Payments made under the latter contracts generally fall under Article 7.***

11.3 The need to distinguish these two types of payments, i.e. payments for the supply of know-how and payments for the provision of services,

R (18)

sometimes gives rise to practical difficulties. The following criteria are relevant for the purpose of making that distinction:

- ***Contracts for the supply of know-how concern information of the kind described in paragraph 11 that already exists or concern the supply of that type of information after its development or creation and include specific provisions concerning the confidentiality of that information.***
- ***In the case of contracts for the provision of services, the supplier undertakes to perform services which may require the use, by that supplier, of special knowledge, skill and expertise but not the transfer of such special knowledge, skill or expertise to the other party.***
- ***In most cases involving the supply of know-how, there would generally be very little more which needs to be done by the supplier under the contract other than to supply existing information or reproduce existing material. On the other hand, a contract for the performance of services would, in the majority of cases, involve a very much greater level of expenditure by the supplier in order to perform his contractual obligations. For instance, the supplier, depending on the nature of the services to be rendered, may have to incur salaries and wages for employees engaged in researching, designing, testing, drawing and other associated activities or payments to sub-contractors for the performance of similar services.***

11.4 Examples of payments which should therefore not be considered to be received as consideration for the provision of know-how but, rather, for the provision of services, include:

- payments obtained as consideration for after-sales service,
- payments for services rendered by a seller to the purchaser under a guarantee,
- payments for pure technical assistance,
- payments for an opinion given by an engineer, an advocate or an accountant, and
- ***payments for advice provided electronically, for electronic communications with technicians or for accessing, through computer networks, a trouble-shooting database such as a database that provides users of software with non-confidential information in response to frequently asked questions or common problems that arise frequently.***

11.5 In the particular case of a contract involving the provision, by the supplier, of information concerning computer programming, as a general rule the payment will only be considered to be made in consideration for the provision of such information so as to constitute know-how where it is made to acquire information constituting ideas and principles underlying the program, such as logic, algorithms or programming languages or

techniques, where this information is provided under the condition that the customer not disclose it without authorisation and where it is subject to any available trade secret protection.

11.6 In business practice, contracts are encountered which cover both know-how and the provision of technical assistance. One example, amongst others, of contracts of this kind is that of franchising, where the franchisor imparts his knowledge and experience to the franchisee and, in addition, provides him with varied technical assistance, which, in certain cases, is backed up with financial assistance and the supply of goods. The appropriate course to take with a mixed contract is, in principle, to break down, on the basis of the information contained in the contract or by means of a reasonable apportionment, the whole amount of the stipulated consideration according to the various parts of what is being provided under the contract, and then to apply to each part of it so determined the taxation treatment proper thereto. If, however, one part of what is being provided constitutes by far the principal purpose of the contract and the other parts stipulated therein are only of an ancillary and largely unimportant character, then it seems possible to apply to the whole amount of the consideration the treatment applicable to the principal part. *[paragraph 45 below includes suggested changes to this last sentence]*

c) *Business profits and payments for the use of, or the right to use, industrial, commercial or scientific equipment*

Analysis and conclusions

21. As already mentioned, a number of bilateral conventions include a definition of royalties that covers “payments for the use of, or the right to use, industrial, commercial or scientific equipment” even though these words are no longer found in the definition of the current OECD Model Tax Convention.[4]

i) Digital products

22. A first question is whether the words “payments for the use of, or the right to use, industrial, commercial or scientific equipment” can apply to payments for time-limited use of a digital product (*e.g.* category 5 dealing with limited duration software and other digital information licenses).

23. The Committee concluded that payments for such use of digital products cannot be considered as payments “for the use of, or the right to use, industrial, commercial or scientific equipment”.[5] Member countries reached that conclusion primarily because digital products are not considered to be “equipment” since the word “equipment” only applies to a tangible product

(and the fact that the digital product is provided on a tangible medium would not change the fact that the object of the transaction is the acquisition of rights to use the digital content rather than rights to use the tangible medium). Additional reasons, which may, depending on the circumstances, apply to some or all payments for time-limited use of a digital product, are:

- because digital products cannot be considered as "equipment" since the word "equipment", in the context of the definition of royalties, applies to property that is intended to be an accessory in an industrial, commercial or scientific process and could not therefore apply to property, such as a music or video CD, that is used in and for itself;
- because such products cannot be viewed as "industrial, commercial or scientific", at least when provided to the private consumer. Based on the nature of these products or the purpose of their acquisition by the users, products such as games, music or videos cannot be considered as "industrial, commercial or scientific" (as these examples show, the two preceding reasons would be primarily relevant where the payment is made by a private consumer); or
- because the payments involved in that type of transaction generally cannot be considered to be "for the use, or the right to use" the product since these words do not apply to a payment made to definitively acquire a property designed to have a short useful life, which is the case for most of these products, *e.g.* where someone acquires a video game CD that is programmed to become unusable after a certain period of time.

ii) Computer equipment

24. In a few transactions the question arises as to whether tangible computer equipment (hardware) is being used by a customer so as to allow the relevant payment to be characterised as "payments for the use of, or the right to use, industrial, commercial or scientific equipment" (see categories 7, 8, 9, 11 and 13 in Annex 2).

25. Such characterization is clearly appropriate where, for instance, the payment is for the rental of a computer and not for services. Factors that may indicate the rental of equipment as opposed to a service contract include:

- the customer is in physical possession of the property,
- the customer controls the property,
- the provider does not use the property concurrently to provide significant services to entities unrelated to the service recipient.

26. This is a non-exclusive list of factors. All relevant facts bearing on the substance of the transaction should be taken into account when determining whether the agreement is a service contract or a lease.

27. In the case of application service provider transactions, the Committee concluded that these transactions should generally give rise to services income as opposed to rental payments. In a typical transaction, the service provider uses the software to provide services to customers, maintains the software as needed, owns the equipment on which the software is loaded, provides access to many customers to the same equipment, and has the right to update and replace the software at will. The customer may not have possession or control over the software or the equipment, will access the software concurrently with other customers, and may pay a fee based on the volume of transactions processed by the software.

28. Likewise, data warehousing transactions should be treated as services transactions. The vendor uses computer equipment to provide data warehousing services to customers, owns and maintains the equipment on which the data is stored, provides access to many customers to the same equipment, and has the right to remove and replace equipment at will. The customer will not have possession or control over the equipment and will utilise the equipment concurrently with other customers.

4. PROVISION OF SERVICES

Analysis and conclusions

29. Whilst the OECD Model Tax Convention does not deal separately with payments for the provision of services, the distinction between these payments and payments made as consideration for the acquisition of property is relevant for certain bilateral conventions as well as for some domestic tax law purposes. The Committee therefore considered it useful to discuss the distinction between the provision of services and transactions resulting in the acquisition of property, noting that the preceding subsection already dealt with the particular question of the distinction between a rental of property and the provision of services.

30. The basic distinction between, on the one hand, a transaction resulting in the acquisition of property and, on the other hand, a transaction in services is whether the consideration for the payment is the acquisition of property from the provider. In this regard, a transaction resulting in the acquisition of property should be understood to include a transaction where a digital product (such as a copy of electronic data, a software program, digitised music or video images, and other forms of digital information and content), whether

provided on a tangible medium or in the form of a digital signal, is acquired by a customer.

31. Generally speaking, if the customer owns the relevant property after the transaction, but the property was not acquired from the provider, then the transaction should be treated as a services transaction. For example, if one party engages another party to create an item of property that the first party will own from the moment of its creation, then no property will have been acquired by the first party from the other and the transaction should be characterised as the provision of services.

32. If, however, one party acquires property from another party, the transaction should nonetheless be characterised as a services transaction to the extent that the predominant nature of the transaction is the provision of services and the acquisition of property is merely ancillary. This would be the case, for example, where the relevant property itself has little intrinsic value and the provider creates value through the exercise of its particular talents and skills to create a unique result for the acquiror. Online consulting or other professional services is an example of an electronic commerce transaction that typically results in services income. In these transactions, the customer usually does not acquire any form of property from the other party. If the customer does acquire property, such as a report, it most likely will have been created specifically for him and arguably was owned by the customer from the moment of its creation. If, however, the customer acquires a valuable report or other property that was not created specifically for that customer, then the transaction could give rise to income from the sale of property. For example, the sale of the same investment report or other high-value proprietary information to many customers should be treated as a sale of property rather than a service. Even if the customer obtained the report electronically by downloading it from a database of reports maintained on the vendor's server, the essential consideration would still be to acquire data transmitted in the form of a digital signal for the own use or enjoyment of the acquiror rather than to obtain a service.

5. TECHNICAL FEES

Analysis and conclusions

33. The Committee examined how various e-commerce payments would be treated under alternative treaty provisions that allow source taxation of "technical fees".

34. Whilst these provisions may be drafted differently, they often include the following definition:

> The term 'technical fees' as used in this Article means payments of any kind to any person, other than to an employee of the person making the payments, in consideration for any service of a technical, managerial or consultancy nature.

35. Alternative formulations of provisions dealing with technical fees typically limit the application of these provisions to some categories of services that could fall within the scope of the definition above.[6] For these reasons, it was decided to restrict the analysis to that definition so as to try to clarify the limits of application of these provisions. In doing so, the three different types of services referred to in the definition were examined separately, *i.e.* technical services, managerial services and consultancy services.

i) Technical services

36. Services are of technical nature when special skills or knowledge related to a technical field are required for the provision of such services. Whilst techniques related to applied science or craftsmanship would generally correspond to such special skills or knowledge, the provision of knowledge acquired in fields such as arts or human sciences would generally not (the services of restoring an old art work is an example of an exception to this general rule). As an illustration, whilst the provisions of engineering services would be of a technical nature, the services of a psychologist would not.

37. The fact that technology is used in providing a service is not indicative of whether the service is of a technical nature. Similarly, the delivery of a service via technological means does not make the service technical. This is especially important in the e-commerce environment as the technology underlying the internet is often used to provide services that are not, themselves, technical (*e.g.* offering on-line gambling services through the internet).

38. In that respect, it is crucial to determine at what point the special skill or knowledge is used. Special skill or knowledge may be used in developing or creating inputs to a service business. The fee for the provision of a service will not be a technical fee, however, unless that special skill or knowledge is required when the service is provided to the customer. For example, special skill or knowledge will be required to develop software and data used in a computer game that would subsequently be used in carrying on the business of allowing consumers to play this game on the internet for a fee. Similarly, special skill or knowledge is used to create a troubleshooting database that customers will pay to access over the Internet. In these examples, however,

the relevant special skill or knowledge is not used when providing the service for which the fee is paid, *i.e.* allowing the consumer to play the computer game or consult the troubleshooting database.

39. Many categories of e-commerce transactions similarly involve the provision of the use of, or access to, data and software (see, for example, categories 7, 8, 9, 11, 13, 15, 16, 20 and 21 in Annex 2). The service of making such data and software, or functionality of that data or software, available for a fee is not, however, a service of a technical nature. The fact that the development of the necessary data and software might itself require substantial technical skills is irrelevant as the service provided to the client is not the development of that data and software (which may well be done by someone other than the supplier) but rather the service of making the data and software available to that client. For example, the mere provision of access to a troubleshooting database would not require more than having available such a database and the necessary software to access it. A payment relating to the provision of such access would not, therefore, relate to a service of a technical nature.

ii) Managerial services

40. Services of a managerial nature are services rendered in performing management functions. The Committee did not attempt to give a definition of management for that purpose but noted that this term should receive its normal business meaning. Thus, it would involve functions related to how a business is run as opposed to functions involved in carrying on that business. As an illustration, whilst the functions of hiring commercial agents would relate to management, the functions performed by these agents (*i.e.* selling) would not.

41. The comments in paragraphs 37 to 39 above are also relevant for the purposes of distinguishing managerial services from the service of making data and software (even if related to management), or functionality of that data or software, available for a fee. The fact that this data and software could be used by the customer in performing management functions or that the development of the necessary data and software, and the management of the business of providing it to customers, might itself require substantial management expertise is irrelevant as the service provided to the client is neither managing the client's business, managing the supplier's business nor developing that data and software (which may well be done by someone other than the supplier) but rather making the software and data available to that client. The mere provision of access to such data and software does not require more than having available such a database and the necessary

software. A payment relating to the provision of such access would not, therefore, relate to a service of a managerial nature.

iii) Consultancy services

42. "Consultancy services" refer to services constituting in the provision of advice by someone, such as a professional, who has special qualifications allowing him to do so. It was recognised that this type of services overlapped the categories of technical and managerial services to the extent that the latter types of services could well be provided by a consultant.

6. MIXED PAYMENTS

Analysis and conclusions

43. There are a number of e-commerce transactions where the consideration of the payment could be considered to cover various elements (*e.g.* the software maintenance transactions described in category 12). These should be dealt with on the basis of the principles for dealing with mixed contracts which are set out in paragraph 11 of the Commentary on Article 12.

44. It was noted, however, that the last sentence of the paragraph provides that "it seems possible to apply to the whole amount of the consideration the treatment applicable to the principal part" where "the other parts [...] are only of an ancillary and largely unimportant character". The Committee considered that it would be more practical, as well as more consistent with the conclusions put forward in the recently approved changes to the Commentary on Article 12, to provide that, in such circumstances, the treatment applicable to the principal part should generally be applied to the whole consideration.

Changes to the Commentary

45. The Committee therefore concluded that the following changes should be made to the Commentary on Article 12 of the OECD Model Tax Convention:

*Replace the last sentence of paragraph 11 of the Commentary on Article 12 by the following (changes to the existing text appear in ~~strikethrough~~ and **bold italics**):*

If, however, one part of what is being provided constitutes by far the principal purpose of the contract and the other parts stipulated therein are only of an ancillary and largely unimportant character, ***then the treatment applicable to the principal part should generally be applied to the whole amount of the consideration***. ~~then it seems possible to apply to the whole amount of the consideration the treatment applicable to the principal part.~~

Notes

1. The TAG report is available in the publication entitled *Taxation and Electronic Commerce – Implementing the Ottawa Taxation Framework Conditions*, OECD, Paris 2001, page 85.
2. See, however, the observations by Greece and Spain included in Annex 3.
3. The same result would apply regardless of whether the payment was made as regards the downloading of one specific product or in the form of a subscription fee for the right to access a web site where that digital product may be downloaded.
4. Paragraph 9 of the Commentary on Article 12 indicates that these words were deleted from the definition of royalties in order "to exclude income from … leasing [of such equipment] from the definition of royalties and, consequently, to remove it from the application of Article 12 in order to make sure that it would fall under the rules for the taxation of business profits…"
5. New Zealand reserves its position on whether payments for the use of digital products can be treated as payments "for the use of, or the right to use, industrial, commercial or scientific equipment." New Zealand is currently considering issues relating to the tax treatment of computer software generally.
6. See, for example, the provision of the India-United States tax convention dealing with "included services".

ANNEX 1

CHANGES TO THE COMMENTARY ON ARTICLE 12 OF THE OECD MODEL TAX CONVENTION

[Changes to the existing text of the Commentary appear in ***bold italics*** *for additions and* ~~strikethrough~~ *for deletions]*

1. Replace paragraph 11 of the Commentary on Article 12 by the following paragraphs 11 to 11.5:

> 11. In classifying as royalties payments received as consideration for information concerning industrial, commercial or scientific experience, paragraph 2 alludes to the concept of 'know-how'. Various specialist bodies and authors have formulated definitions of know-how which do not differ intrinsically. One such definition, given by the '*Association des Bureaux pour la Protection de la Propriété Industrielle*' (ANBPPI), states that 'know-how is all the undivulged technical information, whether capable of being patented or not, that is necessary for the industrial reproduction of a product or process, directly and under the same conditions; inasmuch as it is derived from experience, know-how represents what a manufacturer cannot know from mere examination of the product and mere knowledge of the progress of technique.
>
> ***11.1*** In the know-how contract, one of the parties agrees to impart to the other, so that he can use them for his own account, his special knowledge and experience which remain unrevealed to the public. It is recognised that the grantor is not required to play any part himself in the application of the formulas granted to the licensee and that he does not guarantee the result thereof.
>
> ***11.2*** This type of contract thus differs from contracts for the provision of services, in which one of the parties undertakes to use the customary skills of his calling to execute work himself for the other party. ***Payments made under the latter contracts generally fall under Article 7.***
>
> ***11.3 The need to distinguish these two types of payments, i.e. payments for the supply of know-how and payments for the provision of services, sometimes gives rise to practical difficulties. The following criteria are relevant for the purpose of making that distinction:***
>
> - ***Contracts for the supply of know-how concern information of the kind described in paragraph 11 that already exists or concern the supply of that type of information after its development or creation and include specific provisions concerning the confidentiality of that information.***

- ***In the case of contracts for the provision of services, the supplier undertakes to perform services which may require the use, by that supplier, of special knowledge, skill and expertise but not the transfer of such special knowledge, skill or expertise to the other party.***
- ***In most cases involving the supply of know-how, there would generally be very little more which needs to be done by the supplier under the contract other than to supply existing information or reproduce existing material. On the other hand, a contract for the performance of services would, in the majority of cases, involve a very much greater level of expenditure by the supplier in order to perform his contractual obligations. For instance, the supplier, depending on the nature of the services to be rendered, may have to incur salaries and wages for employees engaged in researching, designing, testing, drawing and other associated activities or payments to sub-contractors for the performance of similar services.***

11.4 Examples of payments which should therefore not be considered to be received as consideration for the provision of know-how but, rather, for the provision of services, include:

- payments obtained as consideration for after-sales service,
- *payments for services rendered by a seller to the purchaser under a guarantee,*
- *payments for pure technical assistance,*
- *payments for an opinion given by an engineer, an advocate or an accountant, and*
- ***payments for advice provided electronically, for electronic communications with technicians or for accessing, through computer networks, a trouble-shooting database such as a database that provides users of software with non-confidential information in response to frequently asked questions or common problems that arise frequently.***

11.5 In the particular case of a contract involving the provision, by the supplier, of information concerning computer programming, as a general rule the payment will only be considered to be made in consideration for the provision of such information so as to constitute know-how where it is made to acquire information constituting ideas and principles underlying the program, such as logic, algorithms or programming languages or techniques, where this information is provided under the condition that the customer not disclose it without authorisation and where it is subject to any available trade secret protection.

11.6 In business practice, contracts are encountered which cover both know-how and the provision of technical assistance. One example, amongst others, of contracts of this kind is that of franchising, where the franchisor imparts his knowledge and experience to the franchisee and, in addition, provides him with varied technical assistance, which, in certain cases, is backed up with financial assistance and the supply of goods. The appropriate course to take with a mixed contract is, in principle, to break down, on the basis of the information contained in the contract or by means of a reasonable apportionment, the whole amount of the stipulated consideration according to the various parts of what is being provided under the contract, and then to apply to each part of it so determined the taxation treatment proper thereto. If, however, one part of what is being provided constitutes by far the principal purpose of the contract and the other parts stipulated therein are only of an ancillary and largely unimportant character, ***then the treatment applicable to the principal part should generally be applied to the whole amount of the consideration.***~~then it seems possible to apply to the whole amount of the consideration the treatment applicable to the principal part.~~"

2. Add the following paragraphs 17.1 to 17.4 immediately after paragraph 17 of the Commentary on Article 12:

17.1 The principles expressed above as regards software payments are also applicable as regards transactions concerning other types of digital products such as images, sounds or text. The development of electronic commerce has multiplied the number of such transactions. In deciding whether or not payments arising in these transactions constitute royalties, the main question to be addressed is the identification of that for which the payment is essentially made.

17.2 Under the relevant legislation of some countries, transactions which permit the customer to electronically download digital products may give rise to use of copyright by the customer, e.g. because a right to make one or more copies of the digital content is granted under the contract. Where the consideration is essentially for something other than for the use of, or right to use, rights in the copyright (such as to acquire other types of contractual rights, data or services), and the use of copyright is limited to such rights as are required to enable downloading, storage and operation on the customer's computer, network or other storage, performance or display device, such use of copyright should not affect the analysis of the character of the payment for purposes of applying the definition of 'royalties'.

17.3 ***This is the case for transactions that permit the customer (which may be an enterprise) to electronically download digital products (such as***

software, images, sounds or text) for that customer's own use or enjoyment. In these transactions, the payment is essentially for the acquisition of data transmitted in the form of a digital signal and therefore does not constitute royalties but falls within Article 7 or Article 13, as the case may be. To the extent that the act of copying the digital signal onto the customer's hard disk or other non-temporary media involves the use of a copyright by the customer under the relevant law and contractual arrangements, such copying is merely the means by which the digital signal is captured and stored. This use of copyright is not important for classification purposes because it does not correspond to what the payment is essentially in consideration for (i.e. to acquire data transmitted in the form of a digital signal), which is the determining factor for the purposes of the definition of royalties. There also would be no basis to classify such transactions as 'royalties' if, under the relevant law and contractual arrangements, the creation of a copy is regarded as a use of copyright by the provider rather than by the customer.

17.4 By contrast, transactions where the essential consideration for the payment is the granting of the right to use a copyright in a digital product that is electronically downloaded for that purpose will give rise to royalties. This would be the case, for example, of a book publisher who would pay to acquire the right to reproduce a copyrighted picture that it would electronically download for the purposes of including it on the cover of a book that it is producing. In this transaction, the essential consideration for the payment is the acquisition of rights to use the copyright in the digital product, i.e. the right to reproduce and distribute the picture, and not merely for the acquisition of the digital content.

ANNEX 2

ANALYSIS OF VARIOUS CATEGORIES OF TYPICAL E-COMMERCE TRANSACTIONS

1. This annex illustrates how the conclusions presented in Sections 1 to 4 apply in the case of some typical electronic commerce transactions.

Category 1: Electronic order processing of tangible products

Definition

> *The customer selects an item from an online catalogue of tangible goods and orders the item electronically directly from a commercial provider. There is no separate charge to the customer for using the online catalogue. The product is physically delivered to the customer by a common carrier.*

Analysis and conclusions

2. Since it does not raise any difficulty as regards treaty characterisation, this category of transaction provides a useful starting point to understand other examples. In this type of transaction, the payment made by the customer constitutes consideration that clearly falls within Article 7 (Business Profits) rather than Article 12 (Royalties), because it does not involve a use of copyright.

Category 2: Electronic ordering and downloading of digital products

Definition

> *The customer selects an item from an online catalogue of software or other digital products and orders the product electronically directly from a commercial provider. There is no separate charge to the customer for using the online catalogue. The digital product is downloaded onto the customer's hard disk or other non-temporary media.*

Analysis and conclusions

3. This category of transaction raises the fundamental characterisation issue discussed in paragraphs 10 to 12 of section 1 above, *i.e.* the distinction between business profits and the part of the treaty definition of "royalties" dealing with payments for the use of, or the right to use, a copyright. In the case of transactions that permit the customer to electronically download digitised products (such as software, images, sounds or text) for the

customer's own use or enjoyment, the payment is made to acquire data transmitted in the form of a digital signal. Since this constitutes the essential consideration for the payment, that payment cannot be considered as royalties as a payment made for the use or the right to use a copyright. To the extent that the act of copying the digital signal onto the customer's hard disk or other non-temporary media (including transfers to other storage, performance or display devices) constitutes the use of a copyright under the relevant law and contractual arrangements, this is merely an incidental part of the process of capturing and storing the digital signal. This incidental part is not important for classification purposes because it does not correspond to the essential consideration for the payment (*i.e.* to acquire data transmitted in the form of a digital signal), which is the determining factor for the purposes of the treaty definition of royalties.

Category 3: Electronic ordering and downloading of digital products for purposes of commercial exploitation of the copyright

Definition

> *The customer selects an item from an online catalogue of software or other digital products and orders the product electronically directly from a commercial provider. There is no separate charge to the customer for using the online catalogue. The digital product is downloaded into the customer's hard disk or other non-temporary media. The customer acquires the right to commercially exploit the copyright in the digital product (e.g. a book publisher acquires a copyrighted picture to be included on the cover of a book that it is producing).*

Analysis and conclusions

4. This category of transaction illustrates a case where the payment qualifies as a royalty. Indeed, in that case, the payment is made as consideration for the right to use the copyright in the digital product. In the example given, that use takes the form of the reproduction and sale, for commercial purpose, of the copyrighted picture.

Category 4: Updates and add-ons

Definition

> *The provider of software or other digital product agrees to provide the customer with updates and add-ons to the digital product. There is no agreement to produce updates or add-ons specifically for a given customer. The customer does*

not acquire the right to commercially exploit the copyright in the digital product or in the update or add-on.

Analysis and conclusions

5. This category of transaction should be treated

– like the transactions described in category 1 above if the updates and adds-on are delivered on a tangible medium;
– like the transactions described in category 2 above if the updates and adds-on are delivered electronically.

6. Since both categories 1 and 2 would give rise to payments falling under Article 7, payments made by the customer in this category of transaction should therefore be treated similarly.

Category 5: Limited duration software and other digital information licenses

Definition

The customer receives the right to use software or other digital products for a period of time that is less than the useful life of the product. The product is either downloaded electronically or delivered on a tangible medium such as a CD. All copies of the digital product are deleted or become unusable upon termination of the license.

Analysis and conclusions

7. Under the OECD Model, that transaction should be treated exactly as transactions falling under categories 1 or 2 so that the payment to the commercial provider of the limited duration digital product would fall under Article 7 (Business Profits).

8. Also, if a particular convention includes a definition of royalties that covers "payments for the use of, or the right to use, industrial, commercial or scientific equipment", such payments cannot be considered as payments "for the use of, or the right to use, industrial, commercial or scientific equipment" for the reasons set out in paragraphs 22 and 23 of section 1 above.

Category 6: Single-use software or other digital product

Definition

The customer receives the right to use software or other digital products one time. The product may be either downloaded or used remotely (e.g. use of

software stored on a remote server). The customer does not receive the right to make copies of the digital product other than as required to use the digital product for its intended use.

Analysis and conclusions

9. Whilst some member countries view this type of transaction as contracts for services and others view them as being similar to the transactions referred to in categories 2 and 5, under both views the payments made in these transactions fall under Article 7 as business profits.

Category 7: Application hosting – separate license

Definition

A customer has a perpetual license to use a software product. The customer enters into a contract with a provider whereby the provider loads the software copy on servers owned and operated by the provider. The provider supplies technical support to protect against failures of the system. The customer can access, execute and operate the software application remotely. The application is executed either at a customer's computer after it is downloaded into RAM or remotely on the provider's server. This type of arrangement could apply, for example, for financial management, inventory control, human resource management or other enterprise resource management software applications.

Analysis and conclusions

10. Under the OECD Model, this type of transaction gives rise to business profits falling under Article 7.

11. Where, however, a particular convention includes a definition of royalties that covers "payments for the use of, or the right to use, industrial, commercial or scientific equipment", the issue arises whether these words can be applied to all or part of the payments arising from these transactions.

12. As discussed in paragraphs 24 to 28 of section 1 above, these transactions should generally give rise to services income as opposed to rental payments. In a typical transaction, the vendor uses computer equipment to provide data warehousing services to customers, owns and maintains the equipment on which the data is stored, provides access to many customers to the same equipment, and has the right to remove and replace equipment at will. The customer will not have possession or control over the equipment and will utilise the equipment concurrently with other customers.

13. Another issue is whether payments arising in this type of transaction could be treated as payments for services of a "technical nature" under

alternative treaty provisions that allow source taxation of "technical fees". To the extent that main service being provided is merely that of storing the data and software of customers, this service is akin to mere warehousing and the performance of that function does not require the direct exercise of any special technical skill or knowledge.

Category 8: Application hosting – bundled contract

Definition

> *For a single, bundled fee, the customer enters into a contract whereby the provider, who is also the copyright owner, allows access to one or more software applications, hosts the software applications on a server owned and operated by the provider, and provides technical support for the hardware and software. The customer can access, execute and operate the software application remotely. The application is executed either at a customer's computer after it is downloaded into RAM or remotely on the provider's server. The contract is renewable annually for an additional fee.*

Analysis and conclusions

14. Under the OECD Model, there would be no need to separate the payment described in this example as all of it would constitute business profits falling under Article 7.

15. Pursuant to the existing paragraph 11 of the Commentary on Article 12, however, the need to separate the payment into various components could arise when applying bilateral conventions that include the alternative provisions referred to in the previous category (see paragraphs 43 to 45 of Section 4 above). This would be the case to the extent that part of the payment relates to the provision of technical support for the software that would constitute services of a technical nature. In that case, that part would be treated differently from the parts relating to allowing access to one or more software applications and hosting such software applications as such functions do not require the application of special skills or knowledge (they essentially require owning the relevant equipment and software rights that are made available).

Category 9: Application service provider ("ASP")

Definition

> *The provider obtains a license to use a software application in the provider's business of being an application service provider. The provider makes available*

to the customer access to a software application hosted on computer servers owned and operated by the provider. The software automates a particular back-office business function for the customer. For example, the software might automate sourcing, ordering, payment, and delivery of goods or services used in the customer's business, such as office supplies or travel arrangements. The provider does not provide the goods or services. It merely provides the customer with the means to automate and manage its interaction with third-party providers of these goods and services. The customer has no right to copy the software or to use the software other than on the provider's server, and does not have possession or control of a software copy.

Analysis and conclusions

16. As regards the payment made by the customer, the issues are similar to those discussed under the preceding category.

Category 10: ASP license fees

Definition

In the example above, the ASP pays the provider of the software application a fee which is a percentage of the revenue collected from customers. The contract is for a one year term.

Analysis and conclusions

17. This type of transaction, being essentially for the provision of a software product to be used in the business of the transferee, falls within Article 7. It is acknowledged that the fact that the ASP's customer will have access to the software copy hosted on servers owned and operated by the provider may technically involve the ASP displaying to the customers some copyrighted information (*e.g.* forms for data input). If, however, providing such access constituted the use of a copyright right by the ASP (for example a display or other right), such use of copyright would be such a minimal part of the consideration for the payment made by the ASP to the software provider that it should not be relevant for the treaty characterisation of that payment.

Category 11: Web site hosting

Definition

The provider offers space on its server to host web sites. The provider obtains no rights in the copyrights created by the developer of the web site content. The owner of the copyrighted material on the site may remotely manipulate the site,

including modifying the content on the site. The provider is compensated by a fee based on the passage of time.

Analysis and conclusions

18. Under the OECD Model, this type of transaction gives rise to business profits falling under Article 7. Where a particular convention includes a definition of royalties that covers "payments for the use of, or the right to use, industrial, commercial or scientific equipment" or alternative treaty provisions that allow source taxation of "technical fees", this type of transaction would not give rise to these two types of income under the circumstances and for the reasons presented under category 7, which deals with application hosting.

Category 12: Software maintenance

Definition

Software maintenance contracts typically bundle software updates together with technical support. A single annual fee is charged for both updates and technical support. In most cases, the principal object of the contract is the software updates.

Analysis and conclusion

19. The remarks expressed in paragraphs 43 to 45 of section 4 above as regards mixed contracts, which refer to the principles set out in paragraph 11 of the Commentary on Article 12, apply to such transactions. Where, under those principles, part of the payment is regarded to be for the provision of technical support, the issues described in category 14 below as regards alternative treaty provisions that allow source taxation of "technical fees" will arise.

Category 13: Data warehousing

Definition

The customer stores its computer data on computer servers owned and operated by the provider. The customer can access, upload, retrieve and manipulate data remotely. No software is licensed to the customer under this transaction. An example would be a retailer who stores its inventory records on the provider's hardware and persons on the customer's order desk remotely access this information to allow them to determine whether orders could be filled from current stock.

Analysis and conclusions

20. Under the OECD Model, this type of transaction gives rise to business profits falling under Article 7. Where a particular convention includes a definition of royalties that covers “payments for the use of, or the right to use, industrial, commercial or scientific equipment” or alternative treaty provisions that allow source taxation of “technical fees”, this type of transaction would not give rise to these two types of income under the circumstances and for the reasons presented under category 7, which deals with application hosting.

Category 14: Customer support over a computer network

Definition

> *The provider provides the customer with online technical support, including installation advice and trouble-shooting information. This support can take the form of online technical documentation, a trouble-shooting database, and communications (e.g. by e-mail) with human technicians.*

Analysis and conclusions

21. Based on this description and under the wording of the OECD Model Convention, the payment arising in this type of transaction would fall within Article 7.

22. Based on paragraphs 14 to 19 of section 1 above and, in particular, the factors listed in paragraphs 15 and 16, the payment for online advice, communications with technicians and using the trouble-shooting database should not be considered as a payment for “information concerning industrial, commercial or scientific experience” (know-how) so as to constitute royalties since that payment is clearly foractual services being performed on demand rather than for the provision of know-how.

23. Whilst the provision of technical documentation could, depending on the circumstances, constitute the provision of know-how, this would require that the information be “undivulged technical information” as described in paragraph 11 of the Commentary on Article 12. Also, as mentioned in the same paragraph, know-how “is necessary for the industrial reproduction of a product or process”. To the extent that know-how must be technical information relating to industrial reproduction of a product or process, information that merely relates to the operation or use of products as opposed to their development or production would not fall under the definition of know-how.

24. The remarks in paragraphs 43 to 45 of Section 4 above, which deal with mixed contracts, would be relevant if the contract were considered to cover the provision of both services and know-how.

25. A last issue is how the payment arising in this type of transaction would be treated under alternative treaty provisions that allow source taxation of "technical fees".

26. Whilst the provision of online advice through communications with technicians may require the application of special skill and knowledge and might therefore constitute services of a technical nature, the mere provision of access to a troubleshooting database would not require more than having available such a database and the necessary software to access it. The part of the payment relating to the provision of such access would not, therefore, relate to a service of a technical nature.

Category 15: Data retrieval

Definition

The provider makes a repository of information available for customers to search and retrieve. The principal value to customers is the ability to search and extract a specific item of data from amongst a vast collection of widely available data.

Analysis and conclusions

27. The payment arising from this type of transaction would fall under Article 7. Some member countries reach that conclusion because, given that the principal value of such a database would be the ability to search and extract the documents, these countries view the contract as a contract for services. Others consider that, in this transaction, the customer pays in order to ultimately obtain the data that he will search for. They therefore view the transaction as being similar to those described in category 2 and will accordingly treat the payment as business profits.

28. Another issue is whether such payment could be considered as a payment for services "of a technical nature" under the alternative provisions on technical fees previously referred to. Providing a client with the use of search and retrieval software and with access to a database does not involve the exercise of special skill or knowledge when the software and database is delivered to the client. The fact that the development of the necessary software and database would itself require substantial technical skills was found to be irrelevant as the service provided to the client was not the development of the software and database (which may well be done by

someone other than the supplier) but rather making the completed software and database available to that client.

Category 16: Delivery of exclusive or other high-value data

Definition

As in the previous example, the provider makes a repository of information available to customers. In this case, however, the data is of greater value to the customer than the means of finding and retrieving it. The provider adds significant value in terms of content (e.g. by adding analysis of raw data) but the resulting product is not prepared for a specific customer and no obligation to keep its contents confidential is imposed on customers. Examples of such products might include special industry or investment reports. Such reports are either sent electronically to subscribers or are made available for purchase and download from an online catalogue or index.

Analysis and conclusions

29. These transactions involve the same characterisation issues as those described in the previous category. Thus, the payment arising from this type of transaction falls under Article 7 and is not a technical fee for the same reason.

Category 17: Advertising

Definition

Advertisers pay to have their advertisements disseminated to users of a given web site. So-called "banner ads" are small graphic images embedded in a web page, which when clicked by the user will load the web page specified by the advertiser. Advertising rates are most commonly specified in terms of a cost per thousand "impressions" (number of times the ad is displayed to a user), though rates might also be based on the number of "click-throughs" (number of times the ad is clicked by a user).

Analysis and conclusions

30. The payments arising from these transactions would constitute business profits falling under Article 7 rather than royalties, even under alternative definitions of royalties that cover payments "for the use, or the right to use, industrial, commercial or scientific equipment".

Category 18: Electronic access to professional advice (*e.g.* consultancy)

Definition

> *A consultant, lawyer, doctor or other professional service provider advises customers through email, video conferencing, or other remote means of communication.*

Analysis and conclusions

31. Again, the payments arising from these transactions would constitute business profits falling under Article 7 rather than royalties. As already stated, the provision of on-demand advice is a service and not the supply of know-how.

32. As some of these transactions may involve the provision of technical, managerial or consultancy services, the issue also arises whether these could be considered as services "of a technical nature" under the alternative provisions on technical fees that have been previously referred to. To the extent that the services were rendered by someone acting as a consultant, they would constitute services of a consultancy nature so as to fall within the definition quoted in paragraph 34 of Section 3.

Category 19: Technical information

Definition

> *The customer is provided with undivulged technical information concerning a product or process (e.g. narrative description and diagrams of a secret manufacturing process).*

Analysis and conclusions

33. Payments arising from this category of transactions constitute royalties as they are made for the supply of know-how, *i.e.* "for information concerning industrial, commercial or scientific experience."

Category 20: Information delivery

Definition

> *The provider electronically delivers data to subscribers periodically in accordance with their personal preferences. The principal value to customers is the*

convenience of receiving widely available information in a custom-packaged format tailored to their specific needs.

Analysis and conclusions

34. This type of transaction raises basically the same issues as the transaction described under category 15 above. The payments arising from these transactions therefore constitute business profits falling under Article 7 and are not technical fees for the same reason.

Category 21: Access to an interactive web site

Definition

The provider makes available to subscribers a web site featuring digital content, including information, music, video, games, and activities (whether or not developed or owned by the provider). Subscribers pay a fixed periodic fee for access to the site. This example differs from the previous one in that the principal value of the site to subscribers is interacting with the site while online as opposed to getting a product or obtaining services from the site.

Analysis and conclusions

35. The subscription fee paid in this type of transactions would constitute a payment for services. As that payment is mainly for the interaction with the site for purposes of the personal enjoyment of the user and not for the provision of any service of a technical, managerial or consultancy nature, it would not, under the previously quoted definition of "technical fees", fall under the alternative provisions covering these types of payments. It should be noted, however, that any payment to the owner of the copyright in the digital content made by the provider for the right to display that content to its subscribers would constitute royalties.

Category 22: Online shopping portals

Definition

A web site operator hosts electronic catalogues of multiple merchants on its computer servers. Users of the web site can select products from these catalogues and place orders online. The web site operator has no contractual relationship with shoppers. It merely transmits orders to the merchants, who are responsible for accepting and fulfilling orders. The merchants pay the web site operator a commission equal to a percentage of the orders placed through the site.

Analysis and conclusions

36. These payments are revenues from advertising or similar services that constitute business profits falling under Article 7.

Category 23: Online auctions

Definition

> *The provider displays many items for purchase by auction. The user purchases the items directly from the owner of the items, rather than from the enterprise operating the site. The vendor compensates the provider with a percentage of the sales price or a flat fee.*

Analysis and conclusions

37. These payments are revenues similar to those of an auction house and constitute business profits falling under Article 7.

Category 24: Sales referral programs

Definition

> *An online provider pays a sales commission to the operator of a web site that refers sales leads to the provider. The web site operator will list one or more of the provider's products on the operator's web site. If a user clicks on one of these products, the user will retrieve a web page from the provider's site from which the product can be purchased. When the link on the operator's web page is used, the provider can identify the source of the sales lead and will pay the operator a percentage commission if the user buys the product.*

Analysis and conclusions

38. These payments constitute business profits falling under Article 7.

Category 25: Content acquisition transactions

Definition

> *A web site operator pays various content providers for news stories, information, and other online content in order to attract users to the site. Alternatively, the web site operator might hire a content provider to create new content specifically for the web site.*

Analysis and conclusions

39. The two alternatives described above need to be distinguished. Where the site operator pays a content provider for the right to display copyrighted material, the payment would fall under the definition of royalties to the extent that the public display of the content constitutes a right covered by the copyright of the owner of the content. Where, however, the operator pays for the creation of new content and, as a result of the relevant contractual arrangements, becomes the owner of the copyright in the content so created, the payment cannot be for royalties and falls under Article 7.

Category 26: Streamed (real time) web based broadcasting

Definition

The user accesses a content database of copyrighted audio and/or visual material. The broadcaster receives subscription or advertising revenues.

Analysis and conclusions

40. The subscription or advertising fees that would be received in these transactions would constitute business profits falling under Article 7.

Category 27: Carriage fees

Definition

A content provider pays a particular web site or network operator in order to have its content displayed by the web site or network operator.

Analysis and conclusions

41. In that type of transactions, the web site or network operator is providing a commercial service for a fee and its income should be characterised as business profits under Article 7. In these transactions, unlike in those described in category 25, it is the owner of the copyrighted material who makes the payment, which makes it clear that Article 12 is not applicable.

Category 28: Subscription to a web site allowing the downloading of digital products

Definition

The provider makes available to subscribers a web site featuring copyrighted digital content (e.g. music). Subscribers pay a fixed periodic fee for access to the

site. Unlike category 21, the principal value of the site to subscribers is the possibility to download these digital products.

Analysis and conclusions

42. The subscription fee paid in this type of transaction would fall under Article 7. As explained in paragraph 3 above, transactions that permit the customer to electronically download digitised products (*i.e.* music in this case) for the customer's own use or enjoyment do not give rise to royalties. This category of transaction is closer to category 2 than to category 21 since the essential consideration for the payment is not the temporary interaction with the site but, rather, the acquisition of the music data transmitted in the form of a digital signal.

ANNEX 3

OBSERVATIONS BY GREECE AND SPAIN

Greece

1. We do not adhere to the interpretation in the fifth dash of paragraph 11.4 [which the report proposes to add to the Commentary on Article 12 – see Annex 1] and we take the view that all relevant payments are falling within the scope of Article 12.

2. We do not adhere to the interpretation in paragraphs 17.2 and 17.3 [which the report proposes to add to the Commentary on Article 12 – see Annex 1] because the payments related to the downloading of computer software ought to be considered as royalties even if those products are acquired for the personal or business use of the purchaser.

Spain

3. The note includes new paragraphs after paragraph 17 of the Commentary on Article 12, in relation with electronic downloading of digital products and other similar categories appeared with the electronic commerce. In order to keep a coherent stance, Spain understands that the observation made to paragraphs 14 and 15 of the Commentary on Article 12 is also applicable to new paragraphs 17.1 to 17.4.

4. Nevertheless, Spain would like to take advantage of this opportunity to reconsider its position on the issue of the software and the royalties, on two different grounds:

- In our view, anyone who is using software for a business purpose should be deemed to be paying a royalty. Thus, it does not matter if that use implies to reproduce and sell, on his turn, the rights to new acquirers or if the software is used in the acquirer's business process as a tool for developing its activity. When there is not business but personal use we agree with the most extended view of not considering these payments as royalties.
- There is a difference to be made between standardised software and the software which is adapted to any extent to the acquirer's individual characteristics. In the first case, when someone acquires standardised software for his personal or business use, even though he is acquiring the right to use that software, in fact, he is acquiring an object, something sold on a homogenous and massive basis to any purchaser, and that should be treated as a merchandise under Article 7. This does not happen in the second case, thus, it should be treated, in our opinion, under Article 12.

5. According with these considerations and with the need of coherence in relation with the new incorporations to the Model, Spain would like its current Observation on the Commentary on Article 12 to be substituted by the following:

> *Spain* does not adhere to the interpretation in paragraphs 14, 15 and 17.1 to 17.4. Spain holds the view that payments relating to software fall within the scope of the Article where less than the full rights to software are transferred either if the payments are in consideration for the right to use a copyright on software for commercial exploitation or if they relate to software acquired for the business use of the purchaser, when, in this last case, the software is not absolutely standardised but somehow adapted to the purchaser.

Issues Arising under Article 5 (Permanent Establishment) of the Model Tax Convention

(adopted by the OECD Committee on Fiscal Affairs on 7 November 2002)

ANNEX 1. Changes to the Commentary . . . . R(19)-42

ANNEX 2. Observations by the Czech Republic . . . . R(19)-53

1. INTRODUCTION

1. This note represents the conclusions of the Committee on Fiscal Affairs[1] with respect to a number of technical issues arising from the current definition of permanent establishment, as found in Article 5 of the Model Tax Convention.

2. The approach generally followed by the Committee has been to focus on practical cases. The particular cases that were examined by the Committee included cases that dealt with the definition of permanent establishment under Article 5 of the OECD Model Tax Convention as well as cases dealing with the attribution of income to permanent establishments under Article 7. Since the issue of attribution of profits to permanent establishments is currently under discussion, the Committee decided to limit its discussion to issues related to the definition of permanent establishment in Article 5 of the Model Tax Convention.

3. During the course of its discussions, the Committee recognised that a number of cases raised the question of whether the concept of permanent establishment was still adapted to modern ways of doing business. Of particular concern in that respect are the area of services and the actual and potential business use of new communication technologies (*e.g.* electronic commerce).

4. The Committee believes, however, that this important question, which addresses the fundamental principles underlying Articles 5 and 7 more than the application and interpretation of these Articles, should be studied separately. For this reason, this report is restricted to problems related to the application and interpretation of the current provisions of the Model Tax Convention that define the concept of permanent establishment. The broader question of whether these provisions should be substantially changed has already been the subject of discussions within the Committee as well as in the Technical Advisory Group on Monitoring the Application of Existing Treaty Norms for the Taxation of Business Profits, a consultative group that has been set up to examine the application of existing treaty rules in the context of electronic commerce. That question will be the subject of future work by the Committee.

5. This note is divided as follows:

- Part 2 deals with problems in applying the "fixed place of business" standard under paragraphs 1 and 2 of Article 5;
- Part 3 deals with problems in the treatment of building sites and construction or installation projects under paragraph 3 of the Article;

1 See, however, the observations by the Czech Republic in Annex 2.

- Part 4 deals with problems in identifying preparatory and auxiliary activities under paragraph 4 of the Article;
- Part 5 deals with problems related to agency permanent establishments under paragraphs 5 and 6 of the Article;
- Annex 1 includes all the changes to the Commentary of the Model Tax Convention that result from this report.

6. Each issue identified in Parts 2 to 5 is presented with a description of the issue, a summary of the discussions and the conclusions of the Committee.

2. "FIXED PLACE OF BUSINESS" (PARAGRAPHS 1 AND 2)

a) Issue 2.1: "Fixed place of business": the geographical link requirement

Issue

7. The need for a geographical link and a certain duration have always been important features of the permanent establishment concept, but the application of these requirements has historically been flexible and sometimes inconsistent. As far as the geographical link requirement is concerned, the issue is that of the proper interpretation of the concept of "fixed place".

Discussion

8. The discussions on the meaning of the phrase "fixed place of business" revealed that this phrase should not be interpreted as a reference to a narrow geographical point and that virtually all countries adopt a broader interpretation. As noted in paragraph 20 of the Commentary on Article 5 in relation to construction sites, there can still be a permanent establishment if the nature of a business is such that activities in relation to a single project may have to be relocated continuously. It was agreed that the concept of "fixed place" ought to be applied on the basis of the nature of the relevant business. That would mean, for example, that a particular street or market could constitute a "fixed place of business" for someone who regularly set up a stand on that street or in that market, even though the stand was not permanently fixed to the ground and the exact location of the stand might vary from time to time.

9. The Committee found that the concept of a place that constitutes a coherent whole commercially and geographically in relation to a particular business (this wording is derived from that used in paragraph 18 of the Commentary on Article 5) would be relevant in applying the concept of "fixed

place of business". For example, a market would constitute such a coherent whole commercially and geographically in relation to market activities so that business activities regularly carried on in different parts of the market could constitute a permanent establishment. The same could not be said in the case of activities carried on in different markets as these would not constitute one such coherent whole. Any geographical area that commercially or economically constitutes a unit could thus constitute a fixed place of business for an enterprise even though the business activities of that enterprise would move within that area.

10. The Committee also noted, in that respect, that returning regularly to a number of different places, each of which would constitute such a unit, could result in a number of different permanent establishments. Thus, for example, if a book-seller regularly came back to two different markets on two different days of the week, he could be found to have two permanent establishments.

Conclusions

11. The Committee agreed that the concept of "fixed place" ought to be applied on the basis of the nature of the relevant business so that the term "place" should be interpreted to refer to any location that constitutes a coherent whole commercially and geographically in relation to a particular business. For example, whilst a farm or a market would constitute such a "coherent economic whole" so that business activities regularly carried on in different parts of the farm or the market could constitute a permanent establishment, the same could not be said in the case of activities carried on in different farms or markets. Any geographical area that commercially or economically constitutes a unit could thus constitute a fixed place of business for an enterprise even though the business activities of that enterprise would move within that area. It was agreed that the Commentary should be amended to clarify that point through a series of examples.

12. It has therefore been decided to add the following new paragraphs 5.1 to 5.4 to the Commentary on Article 5:

> 5.1 Where the nature of the business activities carried on by an enterprise is such that these activities are often moved between neighbouring locations, there may be difficulties in determining whether there is a single 'place of business' (if two places of business are occupied and the other requirements of Article 5 are met, the enterprise will, of course, have two permanent establishments). As recognised in paragraphs 18 and 20 below a single place of business will generally be considered to exist where, in light of the nature of the business, a particular location within which the activities are moved may be

identified as constituting a coherent whole commercially and geographically with respect to that business.

5.2 This principle may be illustrated by examples. A mine clearly constitutes a single place of business even though business activities may move from one location to another in what may be a very large mine as it constitutes a single geographical and commercial unit as concerns the mining business. Similarly, an "office hotel" in which a consulting firm regularly rents different offices may be considered to be a single place of business of that firm since, in that case, the building constitutes a whole geographically and the hotel is a single place of business for the consulting firm. For the same reason, a pedestrian street, outdoor market or fair in different parts of which a trader regularly sets up his stand represents a single place of business for that trader.

5.3 By contrast, where there is no commercial coherence, the fact that activities may be carried on within a limited geographic area should not result in that area being considered as a single place of business. For example, where a painter works successively under a series of unrelated contracts for a number of unrelated clients in a large office building so that it cannot be said that there is one single project for repainting the building, the building should not be regarded as a single place of business for the purpose of that work. However, in the different example of a painter who, under a single contract, undertakes work throughout a building for a single client, this constitutes a single project for that painter and the building as a whole can then be regarded as a single place of business for the purpose of that work as it would then constitute a coherent whole commercially and geographically.

5.4 Conversely, an area where activities are carried on as part of a single project which constitutes a coherent commercial whole may lack the necessary geographic coherence to be considered as a single place of business. For example, where a consultant works at different branches in separate locations pursuant to a single project for training the employees of a bank, each branch should be considered separately. However if the consultant moves from one office to another within the same branch location, he should be considered to remain in the same place of business. The single branch location possesses geographical coherence which is absent where the consultant moves between branches in different locations.

b) Issue 2.2: "Fixed place of business": time requirement

Issue

13. The Committee discussed the time requirement incorporated in the concept of "fixed place". It was generally agreed that the current situation, where different interpretations were sometimes adopted, was unsatisfactory and that the OECD should attempt to provide greater guidance in that respect.

Discussion

14. The attention of the Committee first focused on paragraph 6 of the Commentary on Article 5. It was noted that the first sentence of the paragraph states that for a place of business to constitute a permanent establishment, it must have a "certain degree of permanency, *i.e.* if it is not of a purely temporary nature." The Committee contrasted that statement with that in the second sentence of the paragraph, which reads as follows:

> If the place of business was not set up merely for a temporary purpose, it can constitute a permanent establishment even though it existed, in practice, for a very short period of time because of the special nature of the activity of the enterprise or because, as a consequence of special circumstances (*e.g.* death of the taxpayer, investment failure), it was prematurely liquidated.

15. It was argued that the second sentence contradicted the first sentence to a certain extent and, also, seemed to include a contradiction in itself. Indeed, it may appear surprising to suggest that a place of business which exists only for a very short period of time because of the special nature of the activity of the enterprise (2nd sentence) is not of a purely temporary nature (1st sentence). The same could be said about the conclusion that a place of business which existed for a very short period of time because of the special nature of the activity of the enterprise could be said not to have been set up merely for a temporary purpose.

16. It was therefore decided that paragraph 6, and in particular the first sentence thereof, should be clarified. In doing so, however, the second part of the second sentence, which deals with cases of unforeseen termination, was maintained as it was found to be clear and helpful.

17. The Committee then examined two different cases of temporary business activities: that of recurrent activities, where the business exists for short periods of time but on a recurrent basis over a number of years (*e.g.* a stand in a fair that is occupied for a few weeks each year over a long period of time) and that of temporary projects that are not repeated (*e.g.* a one-shot project, such as the broadcasting of a major sport event, that lasts a few weeks).

18. The Committee agreed that, in the case of recurrent activities, a permanent establishment could exist even if each period of time spent in the country was of a short duration. It was also agreed that the recurrent character of such activities could be determined on the basis of elements establishing the intention of the taxpayer or of evidence that the activities have actually been carried on at one place on a recurrent basis over a long period of time.

19. The Committee had more difficulty with respect to the second type of case. Whilst it was generally agreed that, as implied in paragraph 6 of the Commentary, a crucial factor was the nature of the business under consideration (so that it should be recognised that some businesses need a substantial place of business in order to earn their income whilst others can earn income quickly and without substantial equipment), this was found not to be a factor that would facilitate the practical application of the "fixed" concept. That led the Committee to discuss the suggestion that an administrative threshold of, for example, 6 months, could be adopted by countries to minimize administrative difficulties and provide greater certainty to taxpayers.

20. Various proposals were examined in that respect, including a suggestion that a 6 month rule could be applied as a one-sided deeming provision that would deem a place to be a permanent establishment if it existed for more than 6 months but that would not imply that the place would not be a permanent establishment if it lasted less than that period of time.

21. Another proposal was to adopt an administrative interpretation under which it would merely be considered that a permanent establishment did not exist in the case of activities lasting less than 3 months, without prejudging the issue with respect to longer activities (unless these were recurrent activities, in which case they could constitute a permanent establishment notwithstanding the three month threshold).

22. During the discussions, it was noted that any rule based on an arbitrary period of time would face the traditional difficulties common to safe harbours.

23. After substantial discussion, it was agreed that the Commentary should take account of the practices that have been followed by member countries. Whilst these practices have not been consistent in so far as time requirements are concerned, experience has shown that permanent establishments normally have not been considered to exist in situations where a business had been carried on in a country through a place of business that was maintained for less than six months. One exception has been where the activities were of a recurrent nature; in such cases, each period of time during which the place is used needs to be considered in combination with the number of times during which that place is used (which may extend over a number of years). Another exception has been made where activities constituted a business that

was carried on exclusively in that country; in this situation, the business may have short duration because of its nature but since it is wholly carried on in that country, its connection with that country is stronger. Conversely, practice shows that there were many cases where a permanent establishment had been considered to exist where the place of business was maintained for a longer period. The Committee decided that, for ease of administration, countries should be invited to consider these practices when addressing disagreements as to whether a particular place of business that exists only for a short period of time constitutes a permanent establishment.

Conclusions

24. The Committee has decided that paragraph 6 of the Commentary on Article 5 should be replaced by the following paragraphs:

> 6. Since the place of business must be fixed, it also follows that a permanent establishment can be deemed to exist only if the place of business has a certain degree of permanency, *i.e.* if it is not of a purely temporary nature. A place of business may, however, constitute a permanent establishment even though it exists, in practice, only for a very short period of time because the nature of the business is such that it will only be carried on for that short period of time. It is sometimes difficult to determine whether this is the case. Whilst the practices followed by member countries have not been consistent in so far as time requirements are concerned, experience has shown that permanent establishments normally have not been considered to exist in situations where a business had been carried on in a country through a place of business that was maintained for less than six months (conversely, practice shows that there were many cases where a permanent establishment has been considered to exist where the place of business was maintained for a period longer than six months). One exception has been where the activities were of a recurrent nature; in such cases, each period of time during which the place is used needs to be considered in combination with the number of times during which that place is used (which may extend over a number of years). Another exception has been made where activities constituted a business that was carried on exclusively in that country; in this situation, the business may have short duration because of its nature but since it is wholly carried on in that country, its connection with that country is stronger. For ease of administration, countries may want to consider these practices when they address disagreements as to whether a particular place of business that exists only for a short period of time constitutes a permanent establishment.

6.1 As mentioned in paragraphs 11 and 19, temporary interruptions of activities do not cause a permanent establishment to cease to exist. Similarly, as discussed in paragraph 6, where a particular place of business is used for only very short periods of time but such usage takes place regularly over long periods of time, the place of business should not be considered to be of a purely temporary nature.

6.2 Also, there may be cases where a particular place of business would be used for very short periods of time by a number of similar businesses carried on by the same or related persons in an attempt to avoid that the place be considered to have been used for more than purely temporary purposes by each particular business. The remarks of paragraph 18 on arrangements intended to abuse the 12 month period provided for in paragraph 3 would equally apply to such cases.

6.3 Where a place of business which was, at the outset, designed to be used for such a short period of time that it would not have constituted a permanent establishment but is in fact maintained for such a period that it can no longer be considered as a temporary one, it becomes a fixed place of business and thus - retrospectively - a permanent establishment. A place of business can also constitute a permanent establishment from its inception even though it existed, in practice, for a very short period of time, if as a consequence of special circumstances (*e.g.* death of the taxpayer, investment failure), it was prematurely liquidated.

c) Issue 2.3: Relationship between the enterprise and the fixed place of business

Issue

25. Paragraph 1 requires that a fixed place of business must be a place through which the business of the enterprise is wholly or partly carried on in order to constitute a permanent establishment. It has been suggested that this requires that the enterprise have a certain legal right to use the place as a basis for carrying on its business activities.

Discussion

26. The Committee noted that paragraph 4 of the Commentary already makes it clear that the mere fact that an enterprise "has a certain amount of space at its disposal" which is used for business activities is sufficient to constitute a place of business so that no formal legal right is required. Thus, for instance, a permanent establishment could exist where an enterprise illegally occupied a certain location where it carried on its business.

27. Whilst the Committee agreed that no formal legal right to use a particular place was required for that place to constitute a permanent establishment, it recognised that the mere presence of an enterprise at a particular location would not necessarily mean that that location was at the disposal of that enterprise. That led the Committee to discuss the circumstances in which the presence of representatives of one enterprise on the premises of another enterprise could constitute a permanent establishment. One example is that of a salesman who regularly visits a major customer to take orders and meets the purchasing director in his office to do so. In that case, the customer's premises are not at the disposal of the enterprise for which the salesman is working and therefore do not constitute a fixed place of business through which the business of that enterprise is carried on (depending on the circumstances, however, paragraph 5 could apply to deem a permanent establishment to exist).

28. A second example is that of an employee of a company who, for a long period of time, is allowed to use an office in the headquarters of another company (e. g. a newly acquired subsidiary) in order to ensure that the latter company complies with its obligations under contracts concluded with the former company. In that case, the employee is carrying on activities related to the business of the former company and because the office at the headquarters of the other company is at his disposal, it will constitute a permanent establishment of his employer provided that the other conditions of Article 5 are met.

29. A third example is that of a road transportation enterprise which uses a delivery dock at a customer's warehouse every day for a number of years for the purpose of delivering goods purchased by that customer. In that case, the presence of the road transportation enterprise at the delivery dock is so limited that that place cannot be considered as being at that enterprise's disposal so as to constitute a permanent establishment of that enterprise.

30. A fourth example is that of a painter who, for two years, spends three days a week in the large office building of its main client. In that case, the presence of the painter in that office where he is performing the most important functions of his business (*i.e.* painting) would constitute a permanent establishment of that painter.

31. The Committee also discussed the meaning of the words "a place … through which" [*"une installation … par l'intermédiaire de laquelle"*] in paragraph 1 of Article 5. It first noted that the 1963 Draft Convention used the words "a place … in which" [*"une installation … où"*] and concluded that the drafting change had been made in an attempt to accommodate situations where business is not literally carried on "in" a place. For instance, it may look awkward to use the preposition "in" with respect to a construction site (*e.g.* a

road) or automated equipment. For that reason, the Committee considers that the word "through" must be given a wide meaning so as to apply to any situation where business activities are carried on at a particular location that is at the disposal of the enterprise for that purpose. Thus, for instance, an enterprise engaged in paving a road will be considered to be carrying on its business "through" the location where this activity takes place.

Conclusions

32. The Committee has decided that the following paragraphs should be added to the Commentary:

> 4.1 As noted above, the mere fact that an enterprise has a certain amount of space at its disposal which is used for business activities is sufficient to constitute a place of business. No formal legal right to use that place is therefore required. Thus, for instance, a permanent establishment could exist where an enterprise illegally occupied a certain location where it carried on its business.
>
> 4.2 Whilst no formal legal right to use a particular place is required for that place to constitute a permanent establishment, the mere presence of an enterprise at a particular location does not necessarily mean that that location is at the disposal of that enterprise. These principles are illustrated by the following examples where representatives of one enterprise are present on the premises of another enterprise. A first example is that of a salesman who regularly visits a major customer to take orders and meets the purchasing director in his office to do so. In that case, the customer's premises are not at the disposal of the enterprise for which the salesman is working and therefore do not constitute a fixed place of business through which the business of that enterprise is carried on (depending on the circumstances, however, paragraph 5 could apply to deem a permanent establishment to exist).

4.3 A second example is that of an employee of a company who, for a long period of time, is allowed to use an office in the headquarters of another company (*e.g.* a newly acquired subsidiary) in order to ensure that the latter company complies with its obligations under contracts concluded with the former company. In that case, the employee is carrying on activities related to the business of the former company and the office that is at his disposal at the headquarters of the other company will constitute a permanent establishment of his employer, provided that the office is at his disposal for a sufficiently long period of time so as to constitute a "fixed place of business" (see paragraphs 6 to 6.3) and that the activities that are performed there go beyond the activities referred to in paragraph 4 of the Article.

4.4 A third example is that of a road transportation enterprise which would use a delivery dock at a customer's warehouse every day for a number of years for the purpose of delivering goods purchased by that customer. In that case, the presence of the road transportation enterprise at the delivery dock would be so limited that that enterprise could not consider that place as being at its disposal so as to constitute a permanent establishment of that enterprise.

4.5 A fourth example is that of a painter who, for two years, spends three days a week in the large office building of its main client. In that case, the presence of the painter in that office building where he is performing the most important functions of his business (*i.e.* painting) constitute a permanent establishment of that painter.

4.6 The words "through which" must be given a wide meaning so as to apply to any situation where business activities are carried on at a particular location that is at the disposal of the enterprise for that purpose. Thus, for instance, an enterprise engaged in paving a road will be considered to be carrying on its business "through" the location where this activity takes place.

d) Issue 2.4: Place of management

Issue

33. Sub-paragraph 2 *a*) of Article 5 provides that "a place of management" is an example of the term "permanent establishment". The meaning of this phrase can pose difficulties. In some cases, member countries have agreed that an enterprise has a permanent establishment in the State where it carries on activities because the management of the enterprise is found to be situated there. These cases have mainly arisen where enterprises resident in one State have established business activities, but no fixed offices, in another State and carried on such activities continuously for several years, maintaining only a limited presence in the first State. However, the scope of application of this principle has so far been restricted, and has not been extended to cases where substantial activities are carried on in the State of residence or in a third country, or where actual management functions are attached to the part of the enterprise in the State of residence.

Discussion

34. The Committee discussed whether a roving business can be deemed to have a "place of management" in the country in which it operates, even if it has no office or other fixed place at which the management activity is carried out. It concluded that the examples listed in paragraph 2 are intended to be illustrations of the principle stated in paragraph 1, and that a "place of

management" must meet the "fixed place of business" standard in order to qualify as a permanent establishment under that paragraph. In the circumstances described, therefore, the business in fact has no "place of management" within the meaning of Article 5, even if all the management activities take place within the country of its operations. Some delegates, however, questioned whether this was an appropriate result.

35. The Committee further observed that the issue may arise only in a limited number of cases. Businesses that do not have offices are likely to be small, including many operated as sole proprietorships. The residence rules of the country of activity will tend to classify many, if not most, such businesses (or their employees) as residents, and the rules of Article 4 will in most cases operate so as to allow the country of activity to tax the income arising from that activity as income of a resident. Exceptions to this general scenario will probably be infrequent.

36. The Committee also agreed that the reference to "place of management" in Article 5 must be distinguished from the reference to the "place of effective management" because an enterprise can have only one place of effective management even though it can have many places of management.

37. An additional point was raised about the "place of management" example. An example was discussed involving a foreign parent corporation seconding an employee to its subsidiary for three months in order to manage it. On a literal reading of paragraph 2, it could be argued that the foreign parent has a permanent establishment in this situation because it is managing the subsidiary through its employee. The Committee agreed that although Article 5 and its Commentaries do not state explicitly that the "management" referred to is the management of the enterprise itself, not of some other entity, this concept is so widely understood that no clarification is necessary (in the context of that example, the Committee did not extensively discuss whether there were some other legal basis on which such a manager might give rise to a permanent establishment).

38. The Committee also discussed the case of a craftsman who owns a house in one state, of which he is a resident, and who works at various sites in a neighbouring state, where he also has a house. The Committee agreed that in that case, the craftsman's house in the other state could be considered to be a place of management, and thus a permanent establishment, to the extent that the craftsman uses that house to manage his business, *i.e.* if it is where he receives calls, stores his tools, prepares his accounting records, etc.

Conclusions

39. The Committee decided that no change to the Commentary was required to deal with this issue.

e) *Issue 2.5: Active v. passive activity*

Issue

40. It is very easy for a taxpayer to ensure that a permanent establishment exists if that is the result desired. Some enterprises have set up permanent establishments in countries that do not tax foreign source interest income in order to lend money to other companies within a multinational group. The country where the debtors are located attributes the income to a permanent establishment in the other country and does not impose tax, but the passive foreign source interest income is also not taxed by the country where the permanent establishment is located. The question is whether it might be possible to clarify that the "business" carried on by the enterprise through the purported permanent establishment must be an active business that involves more than simply earning passive income.

Discussion

41. The Committee discussed whether it would be possible or advisable to change the Article or the Commentary in a way that would satisfactorily address this point. The difficulty presented is that of identifying the cases which are truly abusive; a rule that broadly required an active business would affect many holding companies set up for legitimate non-tax purposes.

42. It was noted that this may be a domestic law problem for some countries. Several delegates stated that in their countries, an actual business is required before a permanent establishment can be found to exist, and the mere passive receipt of income would not qualify. Some delegates were of the opinion that the problem does not arise where a real business (such as the management of loans) gives rise only to passive income; the problem is where there is in fact no "business" carried on at all by the enterprise, suggesting that a solution to this problem may already exist in the "carrying on business" language of Articles 5 and 7.

43. The Committee agreed that the mere transfer of a loan to a particular location would not be enough to trigger the application of paragraph 4 of Article 11 since a business had to be carried on at that location for a permanent establishment to exist. It concluded that the issue should be addressed through a clarification of the "effectively connected" requirement in paragraph 4 of Article 11.

44. The Committee thus agreed that an amendment to the Commentary on Article 11 was advisable to deal with the issue. It also agreed that whilst the issue was more likely to arise in the context of Article 11 than in the context of Articles 10 and 12, similar changes should be made to the Commentary on the latter Articles for the sake of consistency.

Conclusions

45. It has been decided to add the following paragraphs to the Commentary:

Commentary on Article 10

32.1 It has been suggested that the paragraph could give rise to abuses through the transfer of shares to permanent establishments set up solely for that purpose in countries that offer preferential treatment to dividend income. Apart from the fact that such abusive transactions might trigger the application of domestic anti-abuse rules, it must be recognised that a particular location can only constitute a permanent establishment if a business is carried on therein and, also, that the requirement that a shareholding be 'effectively connected' to such a location requires that the shareholding be genuinely connected to that business.

Commentary on Article 11

25.1 It has been suggested that the paragraph could give rise to abuses through the transfer of loans to permanent establishments set up solely for that purpose in countries that offer preferential treatment to interest income. Apart from the fact that such abusive transactions might trigger the application of domestic anti-abuse rules, it must be recognised that a particular location can only constitute a permanent establishment if a business is carried on therein and, also, that the requirement that a debt-claim be 'effectively connected' to such a location requires that the debt-claim be genuinely connected to that business.

Commentary on Article 12

21. It has been suggested that the paragraph could give rise to abuses through the transfer of rights or property to permanent establishments set up solely for that purpose in countries that offer preferential treatment to royalty income. Apart from the fact that such abusive transactions might trigger the application of domestic anti-abuse rules, it must be recognised that a particular location can only constitute a permanent establishment if a business is carried on therein and, also, that the requirement that a right or property be "effectively connected" to such a location requires that the right or property be genuinely connected to that business.

f) Issue 2.6: Cables and pipelines

Issue

46. Is a submarine cable that passes through the territorial waters of a country a permanent establishment in that country? Under what circumstances do other cables or pipelines constitute permanent establishments?

Discussion

47. The Committee first observed that such a cable or pipeline would constitute immovable property under the domestic laws of some countries. Where this is the case income derived from the use of the cable or pipeline will be taxable under Article 6 and the issue of whether it is a permanent establishment may have little practical significance.

48. The Committee then discussed whether a cable or pipeline would constitute a permanent establishment where the application of Article 6 is not relevant, either because the cable or pipeline does not constitute immovable property in the country where it is located or because no income falling under Article 6 is derived therefrom. It concluded that whilst it appears to be a fixed place of business, the real issue was whether paragraph 4 of Article 5 applied as it could be argued that the cable or pipeline was used solely for purposes of delivery and that the mere use of facilities for purposes of delivery does not constitute a permanent establishment under sub-paragraph 4 *a*) of Article 5.

49. The Committee agreed that the application of the Model in each case would need to take account of the distinction between enterprises that are in the business of transporting data, power, oil, gas etc. through cables or pipelines and enterprises for which such transport is merely incidental to their business, as in the case of an enterprise that is in the business of refining oil and that owns and operates a pipeline that crosses the territory of a country solely to transport its own oil to its refinery located in another country.

50. In the first case, subparagraph 4 *a*) would not be applicable to the extent that the enterprise transports, through the territory of another country, data, power, oil or gas that belongs to other enterprises as the application of that paragraph is restricted to the delivery of goods or merchandise that belongs to the enterprise itself. Also, since such an enterprise would be in the business of transporting property for other enterprises through cables or pipelines, it could not reasonably argue that the operation of a cable or pipeline that crosses the territory of a country, qualifies as an activity of a preparatory or auxiliary character carried on for itself so as to be covered by subparagraph 4 *e*).

51. In the second case, the Committee agreed that subparagraph 4 *a*) would be applicable as the cable or pipeline that crosses the territory of a country would be owned and operated therein solely for purposes of delivery of goods belonging to the enterprise.

Conclusions

52. The Committee has decided that the following paragraph 26.1 should be added after paragraph 26 of the Commentary on Article 5:

26.1 Another example is that of facilities such as cables or pipelines that cross the territory of a country. Apart from the fact that income derived by the owner or operator of such facilities from their use by other enterprises is covered by Article 6 where they constitute immovable property under paragraph 2 of Article 6, the question may arise as to whether paragraph 4 applies to them. Where these facilities are used to transport property belonging to other enterprises, subparagraph *a*), which is restricted to delivery of goods or merchandise belonging to the enterprise that uses the facility, will not be applicable as concerns the owner or operator of these facilities. Subparagraph *e*) also will not be applicable as concerns that enterprise since the cable or pipeline is not used solely for the enterprise and its use is not of preparatory or auxiliary character given the nature of the business of that enterprise. The situation is different, however, where an enterprise owns and operates a cable or pipeline that crosses the territory of a country solely for purposes of transporting its own property and such transport is merely incidental to the business of that enterprise, as in the case of an enterprise that is in the business of refining oil and that owns and operates a pipeline that crosses the territory of a country solely to transport its own oil to its refinery located in another country. In such case, subparagraph *a*) would be applicable.

g) Issue 2.7: Permanent establishment in relation to an enterprise

Issue

53. In paragraphs 1 to 4 of Article 5, the expression "permanent establishment" is not defined in relation to the enterprise. Thus, for example, the argument could be made that any construction project lasting more than 12 months represents a permanent establishment for any enterprise involved in the project so that a sub-contractor engaged on the project for a few days or weeks would be deemed to have a permanent establishment. In this case, it could be further argued that, technically, the source country would have the right to tax the sub-contractor's income since there is no requirement in Article 7 that the permanent establishment be that of the enterprise itself – a

result contrary to the last sentence of paragraph 19 of the Commentary on Article 5 which states that the activities of the sub-contractor must last more than 12 months for him to be taxed.

54. It has therefore been suggested that the expression "of an enterprise" should be added after the expression "permanent establishment" whenever it occurs in paragraphs 1, 2 and 4 and that the wording of paragraph 3 should be amended along the following lines: "A construction site constitutes a permanent establishment of an enterprise only if its activities at that site continue beyond a period of twelve months".

Discussion

55. The Committee examined these suggestions and concluded that whilst a literal interpretation of the Article could produce the result noted above, such a result would clearly be unreasonable and absurd. The Committee noted that the relevant provisions of the Model Tax Convention where the term "permanent establishment" is used always refer to a permanent establishment in relation to the business of an enterprise, thereby making clear the relationship between the enterprise and the permanent establishment. In light of the context of the Convention and the purpose of Article 7, and having regard to the statement already included in paragraph 19 of the Commentary on Article 5, the Committee therefore concluded that a clarification of the Article was not necessary.

Conclusion

56. For these reasons, the Committee concluded that no change to the Commentary was required to deal with this issue.

3. BUILDING SITES AND CONSTRUCTION OR INSTALLATION PROJECTS (PARAGRAPH 3)

a) Issue 3.1: Supervisory activities and the aggregation of construction contracts

Issue

57. An installation project began in January of 1998 and ended in April of 1999. Contractor C was given a contract to perform part of the installation, beginning in January of 1998 but lasting for less than twelve months. Beginning in March of 1998, C assigned more personnel to the same site, based on a separate contract for supervisory services made by the same client for the same overall project, but not in connection with C's installation activities.

Rather, C supervised the work of other contractors on other parts of the project, and for this purpose remained on site until the end of the project.

58. C established a single construction site organisation and was provided with fully furnished offices. An employee remained at the offices during the entire period of C's involvement with the project. The question is whether the two contracts may be considered to be a single unit, and whether profits from the supervisory activities may be attributed to the permanent establishment.

Discussion

59. This example presents two separate questions: (1) Do these facts present a "coherent whole commercially and geographically", allowing the contracts to be aggregated in computing the 12-month period? (2) When and under what circumstances are supervisory activities included within the scope of paragraph 3?

60. With respect to the first question, the Committee reached agreement that a coherent whole probably exists in this situation, although most delegates agreed that in an actual case they would seek a more complete explanation of the facts. In light of this agreement, the Committee concluded that an amendment of the Commentaries on this point is not needed.

61. The second question gave rise to a wider variety of views.

62. After discussion, the Committee agreed that because the text of paragraph 3 did not refer to activities but to the construction site itself, it was difficult to conclude that activities such as supervision which take place on the site and are related to it would not be covered by that paragraph. Whilst that approach was contrary to that put forward in paragraph 17 of the Commentary, the Committee considered that it was more in conformity with the text of the Article and that it reduced the chances that similar activities be treated differently and therefore simplified compliance. It also agreed that States wishing to address this point expressly in their bilateral conventions may do so.

Conclusions

63. With respect to the first issue, the Committee concluded that an amendment of the Commentaries on this point was not needed.

64. With respect to the second issue, the Committee agreed that paragraph 3 applied where planning and supervisory activities took place on the construction site. It therefore agreed that the Commentary should be changed accordingly and to allow States wishing to clarify this point in their bilateral conventions to do so. It has therefore decided to replace the three last sentences of paragraph 17 of the Commentary on Article 5 by the following:

… On-site planning and supervision of the erection of a building are covered by paragraph 3. States wishing to modify the text of the paragraph to provide expressly for that result are free to do so in their bilateral conventions.

b) Issue 3.2: Computation of the construction period

Issue

65. A construction project in State A undertaken by a foreign contractor lasted from the beginning of 2000 until the end of 2003. From 1 January 2003 until 1 September 2003 there was a complete cessation of work because of planning problems and shortages of raw materials.

66. There is no question that a permanent establishment existed in 2000-2002. The issue is whether a 9-month interruption is too long to be considered "temporary" under paragraph 19 of the Commentary on Article 5 (which provides that the "clock" for determining the 12-month period keeps running through "temporary" interruptions).

Discussion

67. Some taxpayers have requested that more certainty be offered in determining how to deal with interruptions in the construction period. It has been proposed that the Commentary should state that a six-month interruption will stop the clock (creating a rebuttable presumption if resumption of work is clearly foreseen at a definite date past six months) rather than use the vague concept of "temporary".

68. The Committee agreed that the rule of thumb contained in paragraph 19 is perhaps not always adapted to particular circumstances, but it is clear and easy to apply. A six-month rule might require a determination of when a work slowdown became a work stoppage. Whilst the Committee considered an addition to paragraph 19 of the Commentary to deal with cases where, for example, a strike could push a construction project which would normally have lasted less than 12 months beyond the 12 month threshold, it thought that such a result, which could appear somewhat arbitrary, would still be better than trying to design a safe harbour and trying to examine the nature of each interruption.

Conclusions

69. The Committee, after having discussed a possible amendment as described above, decided against it because of the risk that it would generate abuses and because the determination of whether a new construction project

has truly begun should not be made solely on the basis of the period of time since work has stopped on a construction site.

c) Issue 3.3: Scope of the reference to "installation project"

Issue

70. It has sometimes been suggested that the reference in paragraph 3 to an "installation project" refers exclusively to a project for the fixed installation of heavy equipment in the context of a construction project.

Discussion

71. The Committee discussed this narrow point and concluded that the reference to an "installation project" in paragraph 3 of Article 5 refers to any installation project, regardless of whether the installation occurs in the course of, after, or independently from, the construction of a building or other structure. It was brought to the attention of the Committee that a different interpretation had apparently been adopted in some countries; for that reason, the Committee decided that the Commentary on paragraph 3 should be clarified in that respect.

Conclusions

72. The Committee has decided that the first two sentences of paragraph 17 of the Commentary on Article 5 should be replaced by the following (proposed additions are in ***bold italics***):

17. The term "building site or construction or installation project" includes not only the construction of buildings but also the construction of roads, bridges or canals, the laying of pipe-lines and excavating and dredging. ***Additionally, the term "installation project" is not restricted to an installation related to a construction project; it also includes the installation of new equipment, such as a complex machine, in an existing building or outdoors….***

d) Issue 3.4: Multiple installation projects

Issue

73. For purposes of computing the period of time referred to in paragraph 3 of Article 5 in relation to installation projects, the issue has arisen as to whether various contracts for the acquisition of similar equipment requiring installation could be aggregated.

Discussion

74. The Committee agreed that this issue was already dealt with in paragraph 18 of the Commentary on Article 5, which makes it clear that the twelve month test is to be applied to each individual installation project, unless such projects formed a whole commercially and geographically. Thus, successive installation projects resulting from completely unrelated purchases of similar equipment, where these different purchases result from the progressive expansion of a plant's capacity, should be treated separately for purposes of computing the 12 month period. The result would clearly be different, however, if the different sales were all part of an attempt to divide one project in smaller contracts.

Conclusions

75. Although there was unanimous agreement on the conclusion reached, the Committee considered that paragraph 18 of the Commentary on Article 5 was clear enough in that respect so that no clarification was required.

e) Issue 3.5: Renovations

Issue

76. The issue has arisen whether the reference in paragraph 3 to a "building site or construction … project" covers renovation activities.

Discussion

77. The members of the Committee agreed that the renovation of a building or other structure was covered by the phrase a "building site or construction … project" and that that interpretation reflected the practice previously followed.

78. It was noted that renovations involve substantial structural work which, as opposed to mere maintenance or redecoration, requires construction workers as well as the establishment of a site that corresponds to a construction site.

Conclusions

79. The Committee has decided to amend the first sentence of paragraph 17 of the Commentary as follows:

> The term "building site or construction or installation project" includes not only the construction of buildings but also the construction of roads, bridges or canals***, the renovation (involving more than mere maintenance***

or redecoration) of buildings, roads, bridges or canals, the laying of pipe-lines and excavating and dredging.

f) Issue 3.6: Coherent geographic whole

Issue

80. A non-resident company builds one half of an offshore platform on one site in State A and the other half on another site in that State and then tows the two halves to a third site in the same State for final assembly. Can these steps be regarded as part of a "coherent whole commercially and geographically" within the meaning of paragraph 18 of the Commentary on Article 5?

Discussion

81. This example suggests that there is a difference between a site and a project. This example should properly be regarded as a construction or installation project. Paragraph 20 of the Commentary already states that a construction or installation project that by its very nature moves from place to place can be a permanent establishment without being a geographic whole. Some delegates asked whether this is an issue limited to the oil industry. It was agreed that this was not necessarily the case.

Conclusions

82. The Committee has decided to replace paragraph 20 of the Commentary on Article 5 by the following (proposed additions are in ***bold italics***):

20. The very nature of a construction or installation project may be such that the contractor's activity has to be relocated continuously or at least from time to time, as the project progresses. This would be the case for instance where roads or canals were being constructed, waterways dredged, or pipe-lines laid. ***Similarly, where parts of a substantial structure such as an offshore platform are assembled at various locations within a country and moved to another location within the country for final assembly, this is part of a single project***. In such cases, the fact that the work force is not present for twelve months in one particular location is immaterial. The activities performed at each particular spot are part of a single project, and that project must be regarded as a permanent establishment if, as a whole, it lasts more than twelve months.

g) Issue 3.7: Place of management of several construction sites

Issue

83. Employees of a company resident in State A come to State B and rent an office there. The company is engaged in the business of renovating old buildings and uses the office for storage, advertising activities, answering telephone calls, and maintaining books of account. The principal place of management of the company remained in State A.

Discussion

84. The Committee discussed this rather specialized example and concluded that the office should be a permanent establishment even if no renovation project lasts more than twelve months. In that case, whilst no particular construction site may itself constitute a permanent establishment, the office itself would. If the company's business had been appliance repair, it seems clear that a permanent establishment would exist and there is no reason to reach a different conclusion in the case of a business of managing building repairs. Article 5 requires that each workplace be examined separately, despite a general similarity between it and other workplaces of the same taxpayer and it was agreed that the part of the Commentary dealing with paragraph 3 should be clarified in that respect.

85. It was also agreed, however, that the fact that the office would constitute a permanent establishment would not change the situation as regards the various sites where the renovation activities are conducted, which would not themselves constitute permanent establishments to the extent that they last less than 12 months. For that reason, the only profits properly attributable to the permanent establishment constituted by the office would be those attributable to the functions performed and risks assumed through that office. This could include profits attributable to functions performed and risks assumed in relation to the various construction sites but only to the extent that these functions and risks are properly attributable to the office.

Conclusions

86. The Committee has decided that paragraph 16 of the Commentary on Article 5 should be replaced by the following (proposed additions are in ***bold italics***):

16. This paragraph provides expressly that a building site or construction or installation project constitutes a permanent establishment only if it lasts more than twelve months. Any of those items which does not meet this condition does not of itself constitute a permanent establishment, even if there is within it an installation, for instance an office or a workshop within

the meaning of paragraph 2, associated with the construction activity. ***Where, however, such an office or workshop is used for a number of construction projects and the activities performed therein go beyond those mentioned in paragraph 4, it will be considered a permanent establishment if the conditions of the Article are otherwise met even if none of the projects involve a building site or construction or installation project that lasts more than 12 months. In that case, the situation of the workshop or office will therefore be different from that of these sites or projects, none of which will constitute a permanent establishment, and it will be important to ensure that only the profits properly attributable to the functions performed and risks assumed through that office or workshop are attributed to the permanent establishment. This could include profits attributable to functions performed and risks assumed in relation to the various construction sites but only to the extent that these functions and risks are properly attributable to the office.***

4. PREPARATORY AND AUXILIARY ACTIVITIES (PARAGRAPH 4)

a) Issue 4.1: Use of "or" in paragraph 25

Issue

87. The first sentence of paragraph 25 of the Commentary to Article 5 reads as follows:

25. A permanent establishment could also be constituted if an enterprise maintains a fixed place of business in order to supply spare parts to customers for the machinery supplied to such customers, or to maintain or repair such machinery, as this goes beyond the pure delivery mentioned in sub-paragraph *a*) of paragraph 4.

R (19)

88. The words "or to maintain or repair" were substituted for the words "and to maintain and repair" in 1992 to conform the English version to the French version of the paragraph. It seems, however, that, as far as the first "and" is concerned, the change should have been made the other way around, *i.e.* the French version should have been modified to reflect the English version. Indeed, it does not seem right to suggest that a place used solely for storage and delivery of spare parts constitutes a permanent establishment.

Discussion

89. There was general agreement within the Committee that the first "or" in the English version should not have been added in 1992. It was decided that paragraph 25 should be amended: (i) to make clear that a permanent

establishment would exist only where activity in addition to mere delivery took place and (ii) to replace the reference to "supply", which might carry the connotation that parts were being sold from the fixed place of business, by "delivery", matching the text of the Article.

Conclusions

90. The Committee has decided that the first sentence of paragraph 25 of the Commentary on Article 5 should be modified in the following way:

25. A permanent establishment could also be constituted if an enterprise maintains a fixed place of business ~~in order to supply~~***for the delivery of*** spare parts to customers for machinery supplied to those customers~~, or to maintain or repair~~***where, in addition, it maintains or repairs*** such machinery, as this goes beyond the pure delivery mentioned in sub-paragraph *a*) of paragraph 4.

b) Issue 4.2: Clarification of the "deeming" language

Issue

91. A producer of orange juice in State A sets up a number of "independent agents" in State B. One agent receives delivery and stores the juice, one distributes it to outlets, and one delivers it to customers and takes retail orders. Together, these separate elements constitute an extensive business presence in State B, but the taxpayer argues that no permanent establishment exists because each place of business must be examined separately under paragraph 4.

Discussion

92. A majority of the Committee believes that the Commentary on Article 5 to some extent supports the taxpayer's position although on the facts given in the example there seems to be at least one permanent establishment (where retail orders are taken). Sub-paragraph *f*) applies to a collection of activities only if they are carried out at one fixed place of business. If the places of business are "separated from each other locally and organisationally", the activities cannot be aggregated to determine the overall character of the taxpayer's activities. A minority of the Committee, however, believes that the activities listed in paragraph 4 may give rise to a permanent establishment if they are not of a preparatory or auxiliary character.

Conclusions

93. The Committee proposes to break paragraph 27, which is already rather long, into two separate paragraphs. New paragraph 27 would consist of the

first five sentences and the last sentence of the paragraph as currently drafted. New paragraph 27.1 would read as follows:

27.1. Sub-paragraph *f*) is of no importance in a case where an enterprise maintains several fixed places of business within the meaning of sub-paragraphs *a*) to *e*) provided that they are separated from each other locally and organisationally, as in such a case each place of business has to be viewed separately and in isolation for deciding whether a permanent establishment exists. ***Places of business are not 'separated organisationally' where they each perform in a Contracting State complementary functions such as receiving and storing goods in one place, distributing those goods through another etc. An enterprise cannot fragment a cohesive operating business into several small operations in order to argue that each is merely engaged in a preparatory or auxiliary activity.***

c) Issue 4.3: Storage facilities

Issue

94. A non-resident parent company owns a resident subsidiary that hitherto has been engaged in selling both automobiles and spare parts. The spare parts storage facility is now to be hived off and treated as a separate branch of the parent company. The activities of the storage facility will be limited to the storage, relocation, and distribution of the spare parts, which will be ordered "directly" from the parent by the customers. Specifically, this means that (a) the settlement of the transactions, with regard to both contracting and accounting, is to be effected exclusively by the parent in its name and for its account; (b) ancillary activities such as settling warranty claims, installing, performing customer service, and advertising are not performed by the storage facility; and (c) the necessary staff is provided under a lease contract, and the facility's own staff is engaged merely in instructing and supervising.

Discussion

95. As in the previous example, the Commentary supports the view that the host country has lost its right to tax the income from the spare parts transactions. Its activities are limited to those listed in sub-paragraphs *a*) through *d*) of paragraph 4. These activities, unlike the "other" activities described in sub-paragraph *e*), are always exempt and are not subject to examination for whether or not they are truly preparatory or auxiliary. These conclusive presumptions were initially adopted to provide certainty to taxpayers that their income from these activities would be taxable, if at all, only in the country of residence.

96. Objection to the result achieved by the company in this example comes from the fact that tax planning has resulted in a reduction of the tax base through the reorganisation. To the extent that the reorganization is not exclusively tax-motivated, this would not be inherently offensive since the company might well have commenced the operation of its subsidiary with the same structure *i.e.* placing within the subsidiary only the automobile sales business and not the spare parts business. If that had been the case it is unlikely that the structure would have been regarded as offensive. As a practical matter it might be thought rather difficult for the company to sever the connection between the parts and automobile aspects of the business and an administration would undoubtedly wish to test such an arrangement to ensure that the subsidiary was not in fact acting as a permanent establishment for the parent in relation to the parts business and to ensure that there was some commercial purposes to the reorganization transactions. Many enterprises would wish to avoid the practical difficulties and the risk of potential tax administration interest involved in this separation so it may be that the situation described would not very often be seen in real cases.

Conclusions

97. The Committee did not adopt any change to the Model in relation to that issue.

5. AGENCY PERMANENT ESTABLISHMENTS (PARAGRAPHS 5 AND 6)

a) Issue 5.1: Level of presence of the agent in the source country

Issue

98. No explicit requirement is expressed in paragraph 5 that the agent should be a resident of or have a fixed place of business in the Contracting State. *Prima facie* therefore an itinerant dependent agent such as a travelling salesman, not resident but visiting the Contracting State, might constitute a permanent establishment provided that he habitually concludes contracts in that State on behalf of his employer. Arguably, this creates the possibility of a permanent establishment in cases where the link with the Contracting State through the enterprise's participation in its economic life is more tenuous than that envisaged under the rules in paragraphs 1 - 4 of the Article.

Discussion

99. Technically, paragraph 5 seems to apply where a foreign enterprise operates in the source country through a non-resident dependent agent that has no fixed place of business in that country.

100. This view results from the wording of paragraph 5. Paragraph 5 constitutes an exception to paragraphs 1 and 2 because it does not explicitly require that the agent possesses a fixed place of business in the source country. It could be argued, however, that this interpretation introduces a paradox. The paragraph provides for a deemed permanent establishment only where contracts are concluded on behalf of the enterprise by an agent; it does not apply where contracts are concluded directly by the principal himself and not through an agent (see below). Thus, a permanent establishment exists where the enterprise acts indirectly in the State through an agent but not where it acts directly in that State.

101. The Committee, however, generally agreed that paragraph 5 is intended to extend the scope of Article 5 so as to give the source country the right to tax foreign enterprises whenever they participate in the economic life of the source country so as to come within the jurisdiction of that State's taxing rights (see paragraph 3 of the Commentary on Article 7). Thus, the foreign enterprise has the necessary degree of commercial presence in the source country if it either has a "fixed place of business" (paragraph 1) or otherwise carries on business activities in the source country on a regular basis (paragraph 5). The absence of a "fixed place of business" requirement explicitly justifies the treatment as a permanent establishment of a dependent agent with capacity to bind the enterprise, provided he works and contracts in a State with a sufficient degree of permanence that the "habitually" requirement is satisfied, and the apparent paradox identified above is properly resolved by treating the enterprise as possessing a permanent establishment where it contracts directly. It follows from this interpretation that a non-resident agent – whether the agent activities are carried out by a foreign dependent agent or by employees of the enterprise – must satisfy only the requirements in paragraph 5 to constitute a permanent establishment of the foreign enterprise.

102. If the opposite conclusion were reached, it would be possible for a foreign enterprise to carry out extensive business activities in the source country through employees or non-resident dependent agents without becoming exposed to source country taxation. Whilst some countries felt that an employee of the enterprise could not in any event be considered an agent of the enterprise because the employee should simply be regarded as an emanation of the enterprise rather than an agent dealing with the enterprise, the general view was that an employee was properly to be regarded as an

MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

agent for the enterprise and that this was explicitly the position adopted in the existing Commentary, *viz* paragraph 32.

103. The Committee concluded that the rationale behind the agency provisions is to prevent foreign enterprises from escaping source taxation by operating through agents rather than directly through a fixed place of business. Paragraph 5 requires that the agent habitually exercises his contractual authority. It implicitly follows that the agent activities must be relatively frequent in nature and also of a certain overall scale to satisfy the requirement. Whilst from a theoretical perspective there might be a paradox in the application of paragraph 5 from a practical point of view it may be considered to work reasonably well in identifying cases where substantial business is carried on and that is the proper criterion for giving source state taxing rights. The test of habitual exercise may mean that, in practice, the agent's links with the Contracting State will usually be sufficient for him to have a taxable presence in that State on his own account even though that is not an actual requirement of paragraph 5.

104. The Committee recognised that as a practical matter, agents that regularly visit a country but have neither residency status nor a fixed place of business there are hardly ever taxed as permanent establishments of their principals. For example, an individual who comes into a country one day each month to conclude sales contracts on behalf of a foreign principal is unlikely to be found and taxed by that country's revenue authorities. Furthermore, such situations are probably uncommon in modern commercial practice, although they may have been more usual in the past; and they may give rise to cases of double non-taxation if the visiting agent claims exemption in his own country because he literally satisfies the requirements of paragraph 5.

105. The conclusion that there is no requirement that the agent himself should have a fixed place of business or be a resident of a Contracting State places considerable weight upon the requirement that the agent's authority must be exercised "habitually" and it is therefore important there should be a common understanding of that requirement. This point is addressed below.

Conclusions

106. On the basis of the foregoing conclusions, the Committee has decided that paragraph 32 of the Commentary on Article 5 should be amended as follows (proposed additions are in ***bold italics***):

32. Persons whose activities may create a permanent establishment for the enterprise are so-called dependent agents *i.e.* persons, whether or not employees of the enterprise, who are not independent agents falling under paragraph 6. Such persons may be either individuals or companies ***and need not be residents of, nor have a place of business in, the State in which they act for***

the enterprise. It would not have been in the interest of international economic relations to provide that the maintenance of any dependent person would lead to a permanent establishment for the enterprise. Such treatment is to be limited to persons who in view of the scope of their authority or the nature of their activity involve the enterprise to a particular extent in business activities in the State concerned. Therefore, paragraph 5 proceeds on the basis that only persons having the authority to conclude contracts can lead to a permanent establishment for the enterprise maintaining them. In such a case the person has sufficient authority to bind the enterprise's participation in the business activity in the State concerned. The use of the term "permanent establishment" in this context presupposes, of course, that that person makes use of this authority repeatedly and not merely in isolated cases. Also, the phrase "authority to conclude contracts in the name of the enterprise" does not confine the application of the paragraph to an agent who enters into contracts literally in the name of the enterprise; the paragraph applies equally to an agent who concludes contracts which are binding on the enterprise even if those contracts are not actually in the name of the enterprise.

b) Issue 5.2: Agent with implied contractual authority

Issue

107. It has been proposed that the term "conclude" in paragraph 5 of Article 5 be replaced with "substantially negotiate or conclude". This would remove any doubt as to the existence of a permanent establishment where contracts that have been negotiated by an agent in one State are formally concluded in another State by signature there.

Discussion

108. Paragraph 33 of the Commentary on Article 5 already provides that "A person who is authorized to negotiate all elements and details of a contract in a way binding on the enterprise can be said to exercise this authority 'in that State', even if the contract is signed by another person in the State in which the enterprises is situated.". The concern expressed by those favouring the change described above is that some might interpret paragraph 5 of Article 5 as requiring a formalistic approach to the issue of contractual authority. Some delegates had even more serious concerns, namely, that the agency requirement can be circumvented by authorising the agent to negotiate all elements but one of a contract, a problem that, arguably, paragraph 33 of the Commentary only partly addresses.

109. There was general agreement that abusive arrangements under this paragraph need to be attacked, but also that it is difficult to formulate specific

rules by which to do so; clear standards are easy to administer, but also lend themselves to tax planning. The Committee also had difficulty in identifying exactly which cases are in fact abusive. It was argued, for example, that if the agent is paid a market-rate fee for concluding a sales contract, there is nothing left to tax in the hands of the principal even if a permanent establishment is found to exist. It could be argued, however, that in that case the existence of a permanent establishment would lead to taxation of trading profit which might well exceed the arm's length reward to the sales agent particularly if that agent were merely an employee of the enterprise.

110. It was suggested that the Commentary could elaborate further on "rubber stamp" and other similar practices. One suggestion was to clarify that the agent possesses contractual authority if the agent activities factually bind the enterprise. For example, in regard to most "rubber stamp" practices, the agent activities would presumably under most countries' commercial laws factually bind the principal to the concluded contracts. Similarly, the agent would be considered to possess actual authority to conclude contracts where the transactions were completed without the direct intervention of the foreign enterprise. An addition to the Commentary could be made to clarify this point.

Conclusions

111. The Committee has decided that paragraph 32 of the Commentary on Article 5 should be divided with the creation of a new paragraph 32.1, starting with the existing sentence which begins with "Also the phrase 'authority to conclude contracts ...' and that the following additional sentences should be added to the existing text at the end of new paragraph 32.1:"

> … Lack of active involvement by an enterprise in transactions may be indicative of a grant of authority to an agent. For example, an agent may be considered to possess actual authority to conclude contracts where he solicits and receives (but does not formally finalise) orders which are sent directly to a warehouse from which goods are delivered and where the foreign enterprise routinely approves the transactions.

c) *Issue 5.3: Habitually exercising an authority to conclude contracts*

Issue

112. As indicated above, the requirement that the authority to conclude contracts be habitually exercised is a fundamental feature of paragraph 5. Some potential for abuse might exist if a foreign enterprise attempted to circumvent the requirement that an agent "habitually exercises" an authority to conclude contracts by splitting up the coverage of the source country market among a large number of agents or by systematically sending in

different people to the source country to carry out the agent activities. It could then be argued that whilst each of these agents would have the authority to conclude contracts for the enterprise, none could be considered to habitually exercise this authority.

Discussion

113. The Committee agreed that it would be useful for the Commentary to provide some guidance as to what types of activity would be covered by the concept of habitually exercising an authority to conclude contracts. It concluded, however, that the type of abuse described above is probably best dealt with by the application of normal domestic anti-avoidance mechanisms.

Conclusions

114. The Committee has decided that the following clarification of when an agent "habitually" concludes contracts should be made in the Commentary on Article 5 through the addition of the following new paragraph 33.1:

33.1 The requirement that an agent must "habitually" conclude contracts reflects the underlying principle in Article 5 that the presence which an enterprise maintains in a Contracting State should be more than merely transitory if the enterprise is to be regarded as maintaining a permanent establishment, and thus a taxable presence, in that State. The extent and frequency of activity necessary to conclude that the agent is "habitually exercising" contracting authority will depend on the nature of the contracts and the business of the principal. It is not possible to lay down a precise frequency test. Nonetheless, the same sorts of factors considered in paragraph 6 would be relevant in making that determination.

d) Issue 5.4: Commercial representations

Issue

115. The issue of so-called "commercial representations" was raised by the tax authorities of many transition economies as being a source of difficulties. The typical problem involves a foreign enterprise setting up a commercial representation in a country and claiming that it does not constitute a permanent establishment because its activities fall under paragraph 4 of Article 5, even though some sales (officially concluded abroad) may result from these activities.

Discussion

116. Discussions led to the conclusion that "representation", standing alone, has no particular meaning in the treaty area, and may simply obscure the

discussion of the real issues. The existence of a permanent establishment is to be determined under the traditional rules of Article 5 applied to the particular facts at issue.

117. The Committee noted that the issue was most likely to arise in cases where a country gives a formal legal recognition to the concept of commercial representation or representative office and tries to prevent such entities from carrying substantial commercial activities. This will often be the case where the country does not want to allow foreign enterprises to carry branch operations on its territory but is ready to allow them to set up offices for preparatory or auxiliary activities. It may well be that such a legal situation creates an implicit presumption that the only activities carried on by the commercial representation or representative office are those that fall under paragraph 4 of Article 5.

118. In this situation, which is not common in member countries, tax authorities should make it clear that the legal restrictions on the activities of the commercial representation or representative office will not be relevant in determining whether, in fact, the real activities of these entities go beyond those referred to in paragraph 4 of Article 5.

119. Also, paragraph 5 of Article 5 is clearly relevant where contracts are substantially negotiated by employees working in commercial representations and representative offices, particularly in light of the following sentence of paragraph 33 of the Commentary on Article 5: “A person who is authorized to negotiate all elements and details of a contract in a way binding on the enterprise can be said to exercise this authority ‘in that State’, even if the contract is signed by another person in the State in which the enterprises is situated.” It is suggested above in this note that further clarification be provided in the Commentary with respect to that issue; such clarification could be useful in dealing with the problem of commercial representations or representative offices.

Conclusions

120. The Committee concluded that whilst the issue of commercial representations or representative offices was primarily an administrative difficulty related to the commercial law of some countries, clarification of the circumstances in which an agent can be considered to have an authority to conclude contracts (see conclusions under section 5-2) would likely be useful for countries having to deal with that issue.

e) *Issue 5.5: Meaning of independence*

Issue

121. Paragraph 6 refers to "any other agent of an independent status". The practical application of that phrase has given rise to difficulties as the exact meaning of "independence" is unclear.

Discussion

122. Paragraph 37 of the Commentary clarifies that the agent has an independent status if he is legally and economically independent of the foreign enterprise. The Committee agreed that this means in general terms that the agent *vis-à-vis* the foreign enterprise must operate from a position of strength, knowledge or skill.

123. Paragraph 38 explains that the requirements of legal and economic independence are met where the agent has overall control over and bears the risk of his business. Thus an independent agent will typically be responsible to his principal for the results of his work but not subject to significant control with respect to the manner in which that work is carried out. He will not be subject to detailed instructions from the principal as to the conduct of the work. Limitations on the scale of business which may be conducted by the agent clearly affect the scope of the agent's authority. However such limitations are not relevant to dependency which is determined by consideration of the extent to which the agent exercises freedom in the conduct of business on behalf of the principal within the scope of the authority conferred by the agreement. It may be a feature of the operation of an agreement that an agent will provide substantial information to a principal in connection with the business conducted under the agreement. This is not in itself a sufficient criterion for determination that the agent is dependent unless the information is provided in the course of seeking approval from the principal for the manner in which the business is to be conducted. The provision of information which is simply intended to ensure the smooth running of the agreement and continued good relations with the principal is not a sign of dependence. The fact that the principal is relying on the special skill and knowledge of the agent is an indication of independence. Where an agent acts for a number of principals in the ordinary course of his business and none of these is predominant in terms of the business carried on by the agent legal dependence may exist if the principals act in concert to control the acts of the agent in the course of his business on their behalf.

124. The Committee also discussed whether the existing discussion in paragraph 38 of the position of parents and subsidiaries should be extended.

Conclusions

125. The Committee has decided that the following changes should be made to paragraph 38 of the Commentary on Article 5. The sentence "A subsidiary is not to be considered dependent upon its parent company solely because of the parent company's ownership of the share capital" would be deleted and the existing sentence beginning "Another important criterion…" would become the final sentence of paragraph 38. The part of existing paragraph 38 that begins with the following sentence ("Persons cannot be said to act…") would then become new paragraph 38.7 and the following new paragraphs (which include the new paragraph 38.6 proposed in relation to issue 5-6 below) would be added before that paragraph:

> 38.1 In relation to the test of legal dependence, it should be noted that the control which a parent company exercises over its subsidiary in its capacity as shareholder is not relevant in a consideration of the dependence or otherwise of the subsidiary in its capacity as an agent for the parent. This is consistent with the rule in paragraph 7 of Article 5. But, as paragraph 41 of the Commentary indicates, the subsidiary may be considered a dependent agent of its parent by application of the same tests which are applied to unrelated companies.
>
> 38.2 The following considerations should be borne in mind when determining whether an agent may be considered to be independent.
>
> 38.3 An independent agent will typically be responsible to his principal for the results of his work but not subject to significant control with respect to the manner in which that work is carried out. He will not be subject to detailed instructions from the principal as to the conduct of the work. The fact that the principal is relying on the special skill and knowledge of the agent is an indication of independence.
>
> 38.4 Limitations on the scale of business which may be conducted by the agent clearly affect the scope of the agent's authority. However such limitations are not relevant to dependency which is determined by consideration of the extent to which the agent exercises freedom in the conduct of business on behalf of the principal within the scope of the authority conferred by the agreement.
>
> 38.5 It may be a feature of the operation of an agreement that an agent will provide substantial information to a principal in connection with the business conducted under the agreement. This is not in itself a sufficient criterion for determination that the agent is dependent unless the information is provided in the course of seeking approval from the principal for the manner in which the business is to be conducted. The provision of information which is simply intended to ensure the smooth

running of the agreement and continued good relations with the principal is not a sign of dependence.

38.6 Another factor to be considered in determining independent status is the number of principals represented by the agent. Independent status is less likely if the activities of the agent are performed wholly or almost wholly on behalf of only one enterprise over the lifetime of the business or a long period of time. However, this fact is not by itself determinative. All the facts and circumstances must be taken into account to determine whether the agent's activities constitute an autonomous business conducted by him in which he bears risk and receives reward through the use of his entrepreneurial skills and knowledge. Where an agent acts for a number of principals in the ordinary course of his business and none of these is predominant in terms of the business carried on by the agent legal dependence may exist if the principals act in concert to control the acts of the agent in the course of his business on their behalf.

38.7 [FROM OLD 38] Persons cannot be said to act in the ordinary course of their own business if, in place of the enterprise, such persons perform activities which, economically, belong to the sphere of the enterprise rather than to that of their own business operations. Where, for example, a commission agent not only sells the goods or merchandise of the enterprise in his own name but also habitually acts, in relation to that enterprise, as a permanent agent having an authority to conclude contracts, he would be deemed in respect of this particular activity to be a permanent establishment, since he is thus acting outside the ordinary course of his own trade or business (namely that of a commission agent), unless his activities are limited to those mentioned at the end of paragraph 5.

f) Issue 5.6: Agent with only one principal

Issue

126. In deciding whether an agent is dependent or independent, it is important to take into consideration various facts and criteria. It has been suggested to mention explicitly in the Commentaries that an exclusive agency, taken alone, is not a decisive factor by inserting the following sentence after the fourth sentence of paragraph 38 of the Commentary on Article 5:

An agent that sells goods on behalf of the enterprise under an exclusive agency contract is not to be considered dependent on that enterprise solely because of the exclusive contract.

Discussion

127. The Committee noted that some countries interpret paragraph 6 as if it read like the equivalent provision of UN Model, which provides that "when the activities of such an agent are devoted wholly or almost wholly on behalf of that enterprise, he will not be considered an agent of an independent status within the meaning of this paragraph."

128. The fact that there is an exclusive agency (*e.g.* under which the agent is appointed the exclusive distributor of a product for a specified area), is not relevant to a consideration of the dependent or independent nature of the agent. By contrast, the fact that an agent acts exclusively for one principal is relevant in a determination of dependence or independence. The Committee therefore generally agreed that this kind of exclusivity – whether it takes the form of an exclusivity agreement or whether the facts reveal that the agent represents only one principal – is a factor to be considered, but never alone a decisive factor. A distinction might be drawn between the position of an agent whose principal has imposed a contractual condition of exclusivity and that of an agent with a single principal who has imposed no such condition. In the former case the contractual condition creates an element of dependence by the agent upon the enterprise since the agent has no opportunity to diversify his activities. Moreover the imposition of this important restriction on the activity of the agent might be simply one aspect of a more general restriction imposed on the activities of the agent which would be inconsistent with independence. Such a situation may exist de facto in the case of a parent and subsidiary agency relationship and may cause particular difficulty in the application of paragraph 6 where the parent's effective control over the affairs of the subsidiary makes it unnecessary for the reality of the subsidiary's dependent position to be recorded in writing. By contrast, where a single principal has imposed no condition of exclusivity no equivalent restriction is placed upon the scope of business of the agent who retains the opportunity to contract with other principals if this appears to be in the interests of his business.

129. The essential enquiry which must be undertaken in applying the rule in paragraph 6 relates to the requirement, already reflected in paragraph 38 of the Commentary, that the agent's activities constitute an autonomous business conducted by an agent who bears risk and receives reward through the use of his entrepreneurial skills and knowledge. The existence of such an autonomous business is not necessarily inconsistent with a contractual condition imposing exclusivity upon the agent. From a practical perspective, too much emphasis on the exclusivity factor could lead to unreasonable results as an enterprise operating through an independent agent could end up having a permanent establishment without being able to influence its position

if the agent, for valid commercial reasons, decided to abandon all other principals.

Conclusions

130. The Committee has decided that the following new paragraph 38.6 should be added to the Commentary on Article 5 to deal with this issue:

> 38.6 Another factor to be considered in determining independent status is the number of principals represented by the agent. Independent status is less likely if the activities of the agent are performed wholly or almost wholly on behalf of only one enterprise over the lifetime of the business or a long period of time. However, this fact is not by itself determinative. All the facts and circumstances must be taken into account to determine whether the agent's activities constitute an autonomous business conducted by him in which he bears risk and receives reward through the use of his entrepreneurial skills and knowledge. Where an agent acts for a number of principals in the ordinary course of his business and none of these is predominant in terms of the business carried on by the agent legal dependence may exist if the principals act in concert to control the acts of the agent in the course of his business on their behalf.

g) Issue 5.7: Agents acting in the ordinary course of their business

Issue

131. It has been suggested that the practical application of the requirement that independent agents act in the ordinary course of their business is difficult. An important problem, it has been argued, is that it is difficult to envisage a situation where an ordinary business transaction entered into by an entity would not be carried out in the ordinary course of its business.

Discussion

132. Some delegates had difficulty justifying why two agents, performing the same activities for a particular foreign enterprise, should be treated differently, simply because the activities carried out were outside the line of the regular business of one agent but within the line of the regular business activities of the other. Other delegates felt that the distinction was justified and necessary, because an agent could not be considered to operate from a position of strength, knowledge and skill vis-à-vis the foreign enterprise where he was acting outside the scope of his regular business.

133. Paragraph 38 of the Commentary includes the following sentence: "Persons cannot be said to act in the ordinary course of their own business if,

in place of the enterprise, such persons perform activities which, economically, belong to the sphere of the enterprise rather than to that of their own business operations." On the assumption that paragraph 6 applies whether or not an agent binds its principal, that sentence provides limited guidance.

134. The Committee agreed that, in deciding whether or not particular activities fell within or outside the ordinary course of business, one must examine the business activities customarily carried out within the agent's trade or speciality rather than the other business activities carried out by that agent. Some delegates argued that the latter interpretation could have led to unreasonable results. For example, a business engaged solely in the production of goods would necessarily act outside its ordinary course of business when it entered into an agency agreement for the first time whereas later engagements of the same kind could be within the ordinary course of business. The Committee also agreed that whilst the comparison normally should be made with the activities customary to the agent's trade, other complementary tests may in certain circumstances be used concurrently or alternatively. For example, where the agent and principal are affiliated, the relevant comparison may rather be the business activities carried out within that corporate group. Furthermore, the total activities of the particular agent may be the most appropriate comparison in cases where all of the agent's activities deviate from those customarily carried out in his trade.

Conclusions

135. The Committee has decided that the following new paragraph 38.8 should be added to the Commentary on Article 5 to deal with this issue:

> 38.8 In deciding whether or not particular activities fall within or outside the ordinary course of business of an agent, one would examine the business activities customarily carried out within the agent's trade as a broker, commission agent or other independent agent rather than the other business activities carried out by that agent. Whilst the comparison normally should be made with the activities customary to the agent's trade, other complementary tests may in certain circumstances be used concurrently or alternatively, for example where the agent's activities do not relate to a common trade.

ANNEX 1

CHANGES TO THE COMMENTARY

The following are the changes to the Commentary of the Model Tax Convention that are put forward in the report (changes to the existing text are indicated by ~~strikethrough~~ in the case of deletions and ***bold italics*** in the case of additions):

1. Add the following paragraphs 4.1. to 4.6 to the Commentary on Article 5:

   4.1 As noted above, the mere fact that an enterprise has a certain amount of space at its disposal which is used for business activities is sufficient to constitute a place of business. No formal legal right to use that place is therefore required. Thus, for instance, a permanent establishment could exist where an enterprise illegally occupied a certain location where it carried on its business.

   4.2 Whilst no formal legal right to use a particular place is required for that place to constitute a permanent establishment, the mere presence of an enterprise at a particular location does not necessarily mean that that location is at the disposal of that enterprise. These principles are illustrated by the following examples where representatives of one enterprise are present on the premises of another enterprise. A first example is that of a salesman who regularly visits a major customer to take orders and meets the purchasing director in his office to do so. In that case, the customer's premises are not at the disposal of the enterprise for which the salesman is working and therefore do not constitute a fixed place of business through which the business of that enterprise is carried on (depending on the circumstances, however, paragraph 5 could apply to deem a permanent establishment to exist).

   4.3 A second example is that of an employee of a company who, for a long period of time, is allowed to use an office in the headquarters of another company (e.g. a newly acquired subsidiary) in order to ensure that the latter company complies with its obligations under contracts concluded with the former company. In that case, the employee is carrying on activities related to the business of the former company and the office that is at his disposal at the headquarters of the other company will constitute a permanent establishment of his employer, provided that the office is at his disposal for a sufficiently long period of time so as to constitute a 'fixed place of business' (see paragraphs 6 to 6.3) and that the activities that are performed there go beyond the activities referred to in paragraph 4 of the Article.

4.4 A third example is that of a road transportation enterprise which would use a delivery dock at a customer's warehouse every day for a number of years for the purpose of delivering goods purchased by that customer. In that case, the presence of the road transportation enterprise at the delivery dock would be so limited that that enterprise could not consider that place as being at its disposal so as to constitute a permanent establishment of that enterprise.

4.5 A fourth example is that of a painter who, for two years, spends three days a week in the large office building of its main client. In that case, the presence of the painter in that office building where he is performing the most important functions of his business (i.e. painting) constitute a permanent establishment of that painter.

4.6 The words 'through which' must be given a wide meaning so as to apply to any situation where business activities are carried on at a particular location that is at the disposal of the enterprise for that purpose. Thus, for instance, an enterprise engaged in paving a road will be considered to be carrying on its business 'through' the location where this activity takes place.

2. Add the following new paragraphs 5.1 to 5.4 to the Commentary on Article 5:

5.1 Where the nature of the business activities carried on by an enterprise is such that these activities are often moved between neighbouring locations, there may be difficulties in determining whether there is a single 'place of business' (if two places of business are occupied and the other requirements of Article 5 are met, the enterprise will, of course, have two permanent establishments). As recognised in paragraphs 18 and 20 below a single place of business will generally be considered to exist where, in light of the nature of the business, a particular location within which the activities are moved may be identified as constituting a coherent whole commercially and geographically with respect to that business.

5.2 This principle may be illustrated by examples. A mine clearly constitutes a single place of business even though business activities may move from one location to another in what may be a very large mine as it constitutes a single geographical and commercial unit as concerns the mining business. Similarly, an 'office hotel' in which a consulting firm regularly rents different offices may be considered to be a single place of business of that firm since, in that case, the building constitutes a whole geographically and the hotel is a single place of business for the consulting firm. For the same reason, a pedestrian street, outdoor market or fair in

different parts of which a trader regularly sets up his stand represents a single place of business for that trader.

5.3 By contrast, where there is no commercial coherence, the fact that activities may be carried on within a limited geographic area should not result in that area being considered as a single place of business. For example, where a painter works successively under a series of unrelated contracts for a number of unrelated clients in a large office building so that it cannot be said that there is one single project for repainting the building, the building should not be regarded as a single place of business for the purpose of that work. However, in the different example of a painter who, under a single contract, undertakes work throughout a building for a single client, this constitutes a single project for that painter and the building as a whole can then be regarded as a single place of business for the purpose of that work as it would then constitute a coherent whole commercially and geographically.

5.4 Conversely, an area where activities are carried on as part of a single project which constitutes a coherent commercial whole may lack the necessary geographic coherence to be considered as a single place of business. For example, where a consultant works at different branches in separate locations pursuant to a single project for training the employees of a bank, each branch should be considered separately. However if the consultant moves from one office to another within the same branch location, he should be considered to remain in the same place of business. The single branch location possesses geographical coherence which is absent where the consultant moves between branches in different locations.

R (19)

3. Replace paragraph 6 of the Commentary on Article 5 by the following paragraphs:

6. Since the place of business must be fixed, it also follows that a permanent establishment can be deemed to exist only if the place of business has a certain degree of permanency, *i.e.* if it is not of a purely temporary nature. ***A place of business may, however, constitute a permanent establishment even though it exists, in practice, only for a very short period of time because the nature of the business is such that it will only be carried on for that short period of time. It is sometimes difficult to determine whether this is the case. Whilst the practices followed by member countries have not been consistent in so far as time requirements are concerned, experience has shown that permanent establishments normally have not been considered to exist in situations where a business had been carried on in a country through a place of business that was maintained for less than six months (conversely, practice shows that there were many cases where a permanent establishment has been considered to exist where***

the place of business was maintained for a period longer than six months). One exception has been where the activities were of a recurrent nature; in such cases, each period of time during which the place is used needs to be considered in combination with the number of times during which that place is used (which may extend over a number of years). Another exception has been made where activities constituted a business that was carried on exclusively in that country; in this situation, the business may have short duration because of its nature but since it is wholly carried on in that country, its connection with that country is stronger. For ease of administration, countries may want to consider these practices when they address disagreements as to whether a particular place of business that exists only for a short period of time constitutes a permanent establishment.

6.1 As mentioned in paragraphs 11 and 19, temporary interruptions of activities do not cause a permanent establishment to cease to exist. Similarly, as discussed in paragraph 6, where a particular place of business is used for only very short periods of time but such usage takes place regularly over long periods of time, the place of business should not be considered to be of a purely temporary nature.

6.2 Also, there may be cases where a particular place of business would be used for very short periods of time by a number of similar businesses carried on by the same or related persons in an attempt to avoid that the place be considered to have been used for more than purely temporary purposes by each particular business. The remarks of paragraph 18 on arrangements intended to abuse the 12 month period provided for in paragraph 3 would equally apply to such cases.

6.3 Where a place of business which was, at the outset, designed to be used for such a short period of time that it would not have constituted a permanent establishment but is in fact maintained for such a period that it can no longer be considered as a temporary one, it becomes a fixed place of business and thus – retrospectively – a permanent establishment. A place of business can also constitute a permanent establishment from its inception even though it existed, in practice, for a very short period of time, if as a consequence of special circumstances (e.g. death of the taxpayer, investment failure), it was prematurely liquidated.

4. Replace paragraph 16 of the Commentary on Article 5 by the following:

16. This paragraph provides expressly that a building site or construction or installation project constitutes a permanent establishment only if it lasts more than twelve months. Any of those items which does not meet this condition does not of itself constitute a permanent establishment, even if there is within it an installation, for

instance an office or a workshop within the meaning of paragraph 2, associated with the construction activity. ***Where, however, such an office or workshop is used for a number of construction projects and the activities performed therein go beyond those mentioned in paragraph 4, it will be considered a permanent establishment if the conditions of the Article are otherwise met even if none of the projects involve a building site or construction or installation project that lasts more than 12 months. In that case, the situation of the workshop or office will therefore be different from that of these sites or projects, none of which will constitute a permanent establishment, and it will be important to ensure that only the profits properly attributable to the functions performed and risks assumed through that office or workshop are attributed to the permanent establishment. This could include profits attributable to functions performed and risks assumed in relation to the various construction sites but only to the extent that these functions and risks are properly attributable to the office.***

5. Replace paragraph 17 of the Commentary on Article 5 by the following:

17. The term "building site or construction or installation project" includes not only the construction of buildings but also the construction of roads, bridges or canals***, the renovation (involving more than mere maintenance or redecoration) of buildings, roads, bridges or canals,*** the laying of pipe-lines and excavating and dredging. ***Additionally, the term 'installation project' is not restricted to an installation related to a construction project; it also includes the installation of new equipment, such as a complex machine, in an existing building or outdoors. On-site planning and supervision of the erection of a building are covered by paragraph 3. States wishing to modify the text of the paragraph to provide expressly for that result are free to do so in their bilateral conventions.*** ~~Planning and supervision of the erection of a building are covered by this term, if carried on by the building contractor, However, planning and supervision is not included if carried out by another enterprise whose activities in connection with the construction concerned are restricted to planning and supervising the work. If that other enterprise has an office which it uses only for planning or supervision activities relating to a site or project which does not constitute a permanent establishment, such office does not constitute a fixed place of business within the meaning of paragraph 1, because its existence has not a certain degree of permanence.~~

R (19)

6. Replace paragraph 20 of the Commentary on Article 5 by the following:

20. The very nature of a construction or installation project may be such that the contractor's activity has to be relocated continuously or at least from time to time, as the project progresses. This would be the case

for instance where roads or canals were being constructed, waterways dredged, or pipe-lines laid. ***Similarly, where parts of a substantial structure such as an offshore platform are assembled at various locations within a country and moved to another location within the country for final assembly, this is part of a single project***. In such cases, the fact that the work force is not present for twelve months in one particular location is immaterial. The activities performed at each particular spot are part of a single project, and that project must be regarded as a permanent establishment if, as a whole, it lasts more than twelve months.

7. Replace paragraph 25 of the Commentary on Article 5 by the following:

25. A permanent establishment could also be constituted if an enterprise maintains a fixed place of business ~~in order to supply~~***for the delivery of*** spare parts to customers for machinery supplied to those customers~~, or to maintain or repair~~***where, in addition, it maintains or repairs*** such machinery, as this goes beyond the pure delivery mentioned in sub-paragraph *a*) of paragraph 4. Since these after-sale organisations perform an essential and significant part of the services of an enterprise vis-à-vis its customers, their activities are not merely auxiliary ones. Sub-paragraph *e*) applies only if the activity of the fixed place of business is limited to a preparatory or auxiliary one. This would not be the case where, for example, the fixed place of business does not only give information but also furnishes plans etc. specially developed for the purposes of the individual customer. Nor would it be the case if a research establishment were to concern itself with manufacture.

8. Add the following paragraph 26.1 after paragraph 26 of the Commentary on Article 5:

26.1 Another example is that of facilities such as cables or pipelines that cross the territory of a country. Apart from the fact that income derived by the owner or operator of such facilities from their use by other enterprises is covered by Article 6 where they constitute immovable property under paragraph 2 of Article 6, the question may arise as to whether paragraph 4 applies to them. Where these facilities are used to transport property belonging to other enterprises, subparagraph a), which is restricted to delivery of goods or merchandise belonging to the enterprise that uses the facility, will not be applicable as concerns the owner or operator of these facilities. Subparagraph e) also will not be applicable as concerns that enterprise since the cable or pipeline is not used solely for the enterprise and its use is not of preparatory or auxiliary character given the nature of the business of that enterprise. The situation is different, however, where an enterprise owns and operates a cable or pipeline that crosses the territory of a country solely for purposes of transporting its own property and such

transport is merely incidental to the business of that enterprise, as in the case of an enterprise that is in the business of refining oil and that owns and operates a pipeline that crosses the territory of a country solely to transport its own oil to its refinery located in another country. In such case, subparagraph a) would be applicable.

9. Replace paragraph 27 of the Commentary on Article 5 by the following:

27. As already mentioned in paragraph 21 above, paragraph 4 is designed to provide for exceptions to the general definition of paragraph 1 in respect of fixed places of business which are engaged in activities having a preparatory or auxiliary character. Therefore, according to sub-paragraph *f*) of paragraph 4, the fact that one fixed place of business combines any of the activities mentioned in the sub-paragraphs *a*) to *e*) of paragraph 4 does not mean of itself that a permanent establishment exists. As long as the combined activity of such a fixed place of business is merely preparatory or auxiliary a permanent establishment should be deemed not to exist. Such combinations should not be viewed on rigid lines, but should be considered in the light of the particular circumstances. The criterion "preparatory or auxiliary character" is to be interpreted in the same way as is set out for the same criterion of sub-paragraph *e*) (see paragraphs 24 and 25 above). States which want to allow any combination of the items mentioned in sub-paragraphs *a*) to *e*), disregarding whether or not the criterion of the preparatory or auxiliary character of such a combination is met, are free to do so by deleting the words "provided" to "character" in sub-paragraph *f*).

27.1 Sub-paragraph *f*) is of no importance in a case where an enterprise maintains several fixed places of business within the meaning of sub-paragraphs *a*) to *e*) provided that they are separated from each other locally and organisationally, as in such a case each place of business has to be viewed separately and in isolation for deciding whether a permanent establishment exists. ***Places of business are not 'separated organisationally' where they each perform in a Contracting State complementary functions such as receiving and storing goods in one place, distributing those goods through another etc. An enterprise cannot fragment a cohesive operating business into several small operations in order to argue that each is merely engaged in a preparatory or auxiliary activity.***

10. Replace paragraph 32 of the Commentary on Article 5 by the following:

32. Persons whose activities may create a permanent establishment for the enterprise are so-called dependent agents *i.e.* persons, whether or not employees of the enterprise, who are not independent agents falling under paragraph 6. Such persons may be either individuals or companies ***and need not be residents of, nor have a place of business in, the State in***

  © OECD 2012

which they act for the enterprise. It would not have been in the interest of international economic relations to provide that the maintenance of any dependent person would lead to a permanent establishment for the enterprise. Such treatment is to be limited to persons who in view of the scope of their authority or the nature of their activity involve the enterprise to a particular extent in business activities in the State concerned. Therefore, paragraph 5 proceeds on the basis that only persons having the authority to conclude contracts can lead to a permanent establishment for the enterprise maintaining them. In such a case the person has sufficient authority to bind the enterprise's participation in the business activity in the State concerned. The use of the term 'permanent establishment' in this context presupposes, of course, that that person makes use of this authority repeatedly and not merely in isolated cases.

32.1 Also, the phrase "authority to conclude contracts in the name of the enterprise" does not confine the application of the paragraph to an agent who enters into contracts literally in the name of the enterprise; the paragraph applies equally to an agent who concludes contracts which are binding on the enterprise even if those contracts are not actually in the name of the enterprise. ***Lack of active involvement by an enterprise in transactions may be indicative of a grant of authority to an agent. For example, an agent may be considered to possess actual authority to conclude contracts where he solicits and receives (but does not formally finalise) orders which are sent directly to a warehouse from which goods are delivered and where the foreign enterprise routinely approves the transactions.***

11. Add the following paragraph 33.1 to the Commentary on Article 5:

33.1 The requirement that an agent must 'habitually' conclude contracts reflects the underlying principle in Article 5 that the presence which an enterprise maintains in a Contracting State should be more than merely transitory if the enterprise is to be regarded as maintaining a permanent establishment, and thus a taxable presence, in that State. The extent and frequency of activity necessary to conclude that the agent is 'habitually exercising' contracting authority will depend on the nature of the contracts and the business of the principal. It is not possible to lay down a precise frequency test. Nonetheless, the same sorts of factors considered in paragraph 6 would be relevant in making that determination.

12. Replace paragraph 38 of the Commentary on Article 5 by the following:

38. Whether a person is independent of the enterprise represented depends on the extent of the obligations which this person has *vis-à-vis* the enterprise. Where the person's commercial activities for the

enterprise are subject to detailed instructions or to comprehensive control by it, such person cannot be regarded as independent of the enterprise. Another important criterion will be whether the entrepreneurial risk has to be borne by the person or by the enterprise the person represents. ~~A subsidiary is not to be considered dependent on its parent company solely because of the parent's ownership of the share capital.~~

38.1 In relation to the test of legal dependence, it should be noted that the control which a parent company exercises over its subsidiary in its capacity as shareholder is not relevant in a consideration of the dependence or otherwise of the subsidiary in its capacity as an agent for the parent. This is consistent with the rule in paragraph 7 of Article 5. But, as paragraph 41 of the Commentary indicates, the subsidiary may be considered a dependent agent of its parent by application of the same tests which are applied to unrelated companies.

38.2 The following considerations should be borne in mind when determining whether an agent may be considered to be independent.

38.3 An independent agent will typically be responsible to his principal for the results of his work but not subject to significant control with respect to the manner in which that work is carried out. He will not be subject to detailed instructions from the principal as to the conduct of the work. The fact that the principal is relying on the special skill and knowledge of the agent is an indication of independence.

38.4 Limitations on the scale of business which may be conducted by the agent clearly affect the scope of the agent's authority. However such limitations are not relevant to dependency which is determined by consideration of the extent to which the agent exercises freedom in the conduct of business on behalf of the principal within the scope of the authority conferred by the agreement.

38.5 It may be a feature of the operation of an agreement that an agent will provide substantial information to a principal in connection with the business conducted under the agreement. This is not in itself a sufficient criterion for determination that the agent is dependent unless the information is provided in the course of seeking approval from the principal for the manner in which the business is to be conducted. The provision of information which is simply intended to ensure the smooth running of the agreement and continued good relations with the principal is not a sign of dependence.

38.6 Another factor to be considered in determining independent status is the number of principals represented by the agent. Independent status is less likely if the activities of the agent are performed wholly or almost

wholly on behalf of only one enterprise over the lifetime of the business or a long period of time. However, this fact is not by itself determinative. All the facts and circumstances must be taken into account to determine whether the agent's activities constitute an autonomous business conducted by him in which he bears risk and receives reward through the use of his entrepreneurial skills and knowledge. Where an agent acts for a number of principals in the ordinary course of his business and none of these is predominant in terms of the business carried on by the agent legal dependence may exist if the principals act in concert to control the acts of the agent in the course of his business on their behalf.

38.7 [FROM OLD 38] Persons cannot be said to act in the ordinary course of their own business if, in place of the enterprise, such persons perform activities which, economically, belong to the sphere of the enterprise rather than to that of their own business operations. Where, for example, a commission agent not only sells the goods or merchandise of the enterprise in his own name but also habitually acts, in relation to that enterprise, as a permanent agent having an authority to conclude contracts, he would be deemed in respect of this particular activity to be a permanent establishment, since he is thus acting outside the ordinary course of his own trade or business (namely that of a commission agent), unless his activities are limited to those mentioned at the end of paragraph 5.

38.8 In deciding whether or not particular activities fall within or outside the ordinary course of business of an agent, one would examine the business activities customarily carried out within the agent's trade as a broker, commission agent or other independent agent rather than the other business activities carried out by that agent. Whilst the comparison normally should be made with the activities customary to the agent's trade, other complementary tests may in certain circumstances be used concurrently or alternatively, for example where the agent's activities do not relate to a common trade.

R (19)

Commentary on Article 10

13. Add the following paragraph 32.1 to the Commentary on Article 10:

32.1 It has been suggested that the paragraph could give rise to abuses through the transfer of shares to permanent establishments set up solely for that purpose in countries that offer preferential treatment to dividend income. Apart from the fact that such abusive transactions might trigger the application of domestic anti-abuse rules, it must be recognised that a particular location can only constitute a permanent establishment if a business is carried on therein and, also, that the requirement that a

shareholding be 'effectively connected' to such a location requires that the shareholding be genuinely connected to that business.

Commentary on Article 11

14. Add the following paragraph 25.1 to the Commentary on Article 11:

25.1 It has been suggested that the paragraph could give rise to abuses through the transfer of loans to permanent establishments set up solely for that purpose in countries that offer preferential treatment to interest income. Apart from the fact that such abusive transactions might trigger the application of domestic anti-abuse rules, it must be recognised that a particular location can only constitute a permanent establishment if a business is carried on therein and, also, that the requirement that a debt-claim be 'effectively connected' to such a location requires that the debt-claim be genuinely connected to that business.

Commentary on Article 12

15. Add the following new paragraph 21 to the Commentary on Article 12:

21. It has been suggested that the paragraph could give rise to abuses through the transfer of rights or property to permanent establishments set up solely for that purpose in countries that offer preferential treatment to royalty income. Apart from the fact that such abusive transactions might trigger the application of domestic anti-abuse rules, it must be recognised that a particular location can only constitute a permanent establishment if a business is carried on therein and, also, that the requirement that a right or property be 'effectively connected' to such a location requires that the right or property be genuinely connected to that business.

ANNEX 2

OBSERVATIONS BY THE CZECH REPUBLIC

1. The Czech Republic agrees that the concept of "fixed place" ought to be applied on the basis of the nature of the relevant business.

2. In accordance with this statement, the Czech Republic believes that in the case of particular activities such as furnishing of various services which do not need an extensive equipment or space available, it is necessary to take into account their duration within the territory of a State concerned. A period of six months seems to be an appropriate period of time.

3. The Czech Republic is of the opinion that in the cases of services and activities performed on the territory of the Czech Republic on the basis of individual contracts (even repeatedly) with a customer (*e.g.* an extraordinary audit of economic results of business, an overhaul or a maintenance of an equipment, an introduction of a new software system), it means in the cases when the existence of a permanent establishment established on one's own initiative of a foreign resident with the aim to offer and to render the services (activities) to unlimited and unspecified circle of customers is not done (*e.g.* an audit or tax office), the computation of the above-mentioned period of six months is not affected by the fact that these services or activities are performed in connection with the unrelated contracts within the territory of the Czech Republic.

4. Thus the Czech Republic does not agree with the interpretation in proposed paragraphs 5.3 (first part of the paragraph) and 5.4 (first part of the paragraph) of the Commentary on Article 5.

5. The Czech Republic does not agree with the statement that a large office building does not constitute a permanent establishment in the case where a painter works successively under a series of unrelated contracts for a number of unrelated clients in it. It seems to be absurd and economically unfounded. It opens room for abuse and the Czech Republic feels some ambiguity and contradiction because, for example, a particular street could, according to the report, constitute a permanent establishment for someone who regularly (or successively) set up a stand on that street, even though the stand was not permanently fixed and the exact location of the stand might vary. It must be clear that the contracts, clients, etc. are, in this case, each day, each period of time, also unrelated.

6. At the same time, the Czech Republic does not agree with the statement that each branch should be considered separately for the purposes of a permanent establishment in the case where a consultant works at different branches in separate locations pursuant to a single project for training the

employees of a bank. The Czech Republic believes that in such cases the fact that the work is not done in one particular location is immaterial. The activities performed at each particular branch are part of a single project, and such project must be regarded as a permanent establishment if it lasts more than a substantial period of time.

7. The Czech Republic believes that the example mentioned in paragraphs 17 and 18 (that a stand in a fair that is occupied for a few weeks each year over a long period of time could give rise to a permanent establishment in a State where the fair is regularly organised) is difficult to accept for various reasons. The purpose of a fair is primarily to exhibit and to attract and contact customers. Selling is rather secondary and incidental.

8. If it is not this case (not secondary or incidental), then it would be possible to adhere to philosophy that each participation each year gives rise to a permanent establishment separately as the purpose of the business was in such a way achieved.

9. The most inappropriate solution, in the view of the Czech Republic, is that of having a permanent establishment after many years.

10. As regards the proposed changes to paragraph 17 of the Commentary on Article 5, the Czech Republic adopts a narrower interpretation of the term "installation project" and therefore, it restricts it to an installation and assembly related to a construction project.

11. Furthermore, the Czech Republic adheres to an interpretation that supervisory activities will be automatically covered by paragraph 3 of Article 5 only if they are carried on by the building contractor. Otherwise, they will be covered by it, but only if they are expressly mentioned in a special provision.

12. In the case of an installation project not in relation with a construction project and in the case that supervisory activity is carried on by an enterprise other than the building contractor and it is not expressly mentioned in paragraph 3 of Article 5, then these activities are automatically subject to the rules concerning the taxation of income derived from the provision of other services.

Cross-border Income Tax Issues Arising from Employee Stock-Option Plans

FOREWORD

In March 2002, the OECD Committee on Fiscal Affairs released a first public discussion draft on cross-border issues related to employee stock-options. The draft described tax treaty issues that may arise in the case of employee stock-options and included proposals on how to deal with these issues.

On the basis of the comments received on that first draft, the Committee produced a revised draft that included proposals for changes to the Commentary on the OECD Model Tax Convention. The revised draft was released for public comments in July 2003.

The Committee thanks the individuals and organisations that have sent comments on that revised discussion draft. Taking these comments into account, the Committee has now finalized its report. The report, which is attached, was approved by the Committee on 16 June 2004.

INTRODUCTION

1. This note considers the cross-border tax treaty issues that may arise from the use of stock-options as part of employee remuneration packages and presents changes to the Commentary on the OECD Model Tax Convention on how to deal with some of these issues. While the note focuses primarily on issues related to the taxation of the employee, it should be noted that employee stock-option plans (ESOPs)[1] also raise transfer pricing issues which are not dealt with in this note.

2. This note deals exclusively with ESOPs and not with other forms of equity-based remuneration such as share grant or share purchase plans,[2] phantom stock plans, share appreciation rights or employee options granted by non-corporate employers (*e.g.* mutual fund trusts granting options to acquire units of the trust). While many of the issues and principles discussed in this note would be relevant as regards the tax treatment of such forms of equity-based remuneration, the characteristics of each of these would need to be taken into account before reaching any conclusion as to how or whether to apply to them the principles developed in this note.

3. For purposes of this note, no distinction should be made between "in the money"[3] and "out of the money" options so that options are covered by this note regardless of whether they provide for a strike price that is less than, equal to, or greater than the value of the underlying share at the time of grant.

4. This note does not deal with social security issues relative to stock-options. Also, valuation issues related to stock-options are only dealt with to a limited extent, *i.e.* primarily where there are related currency-exchange issues.

BACKGROUND ON ESOPS

5. The following briefly describes some of the various aspects of ESOPs as understood for purposes of this note:

Stock-option

A stock-option is a call option, *i.e.* a right to acquire a share from a given seller at a given moment (so-called "European" options) or during a given period (so-called "American" options) for a given price (strike price).

ESOP

Under an ESOP, stock-options are granted to employees usually subject to certain restrictions (*e.g.* "vesting" period). The "seller" of the shares is often, but not necessarily, the employer (*e.g.* the "seller" could be an associated enterprise). Also, the option may be granted by the employer,

MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

an associated enterprise or an intermediary (such as a trust). The share that is acquired pursuant to a stock-option plan is typically issued by the company at that time but it is not uncommon for the share to be a previously issued share that was acquired by the company on the market. Under a typical ESOP, the time of grant corresponds to the moment when the employee is given, generally subject to certain conditions such as a vesting period, options to acquire shares during a certain period of time.

Benefit to the employee[4]

Benefit when the option is granted (or when it subsequently vests): The option is granted to the employee free of charge or below its market value at the time it is granted.

Benefit when the option is exercised: The employee acquires a share at a price below market value and the benefit corresponds to the difference between the price paid and the market value of the share at that time.[5]

Benefit when the shares are sold: To the extent that shares that have been acquired with a stock-option subsequently increase in value, that increase can be realised by simply selling the shares at market value.

Value of a stock-option

Financially, an option can be valued at any time, including the time when it is granted (if the period for exercising the option is too long or the conditions attached to it too complex, however, the evaluation risks make the evaluation far less reliable). Financial economists have designed formulae to determine the value of the option. These formulae may take into account various parameters (which may themselves need to be estimated): such as spot price of the share, strike price, maturity, volatility, interest rate and dividend payments. The value of an option also depends on the restrictions placed on the option (*e.g.* a vesting period for the exercise or transfer or a right of cancellation).

Vesting of an option

The concept of vesting is commonly used with respect to American options issued to employees. An option will generally be considered to have vested when all conditions for its exercise have been satisfied and the option can thus be exercised.

Among the typical conditions that must be met before an employee can exercise the option that has been granted to him, it is frequently required that the employee continues to work for the employer during a certain period of time. To the extent that such a condition must be met

before the option becomes exercisable, that condition has, in many countries, the legal nature of a condition precedent (common law) or suspensive condition (civil law). The option is not considered to have vested before such a condition has been met. In many countries, however, a condition subsequent (common law) or a resolutory condition (civil law) would not prevent the option from vesting. That would be the case, for example, of a condition that is applicable after the option becomes exercisable and under which the option will be lost if employment is terminated before the option is exercised. When all conditions (such as that one) under which the option may be forfeited have disappeared, the option, which has already vested in the previous example, is said to have "irrevocably" vested. There is therefore an important difference between "vesting" and "irrevocable vesting"; when referring to the time when an option becomes exercisable or may be exercised, this note refers to the time of "vesting" and not to that of "irrevocable vesting".

The concept of vesting creates difficulties as regards European options to the extent that such options do not become exercisable before the expiration date of the option, *i.e.* the date when the option must be exercised (and will be lost if not exercised at that date).[6] For the purposes of this note, it is important to distinguish between a period of employment that is required to obtain the right to exercise an employee stock-option and a period of time that is merely a delay before such option may be exercised (a blocking period). An option should be considered to have vested as soon as all the conditions necessary for the exercise of the option have been met and the right to exercise the option can no longer be forfeited, even if the option is only exercisable at a later date. Thus, for the purpose of this note, a European option should be considered to have vested from the moment employment is no longer required (provided that the other conditions have been satisfied), even if the option may only be exercised at a later date. Where, however, it is provided that the option will be forfeited if the employment is terminated before the date on which the option may be exercised, the option will not, for purposes of this revised draft, be considered to have vested before that date.

ISSUES RELATED TO THE EMPLOYEE

Timing mismatch in taxing the employment benefit

6. The fact that the benefits from an employee stock-option are taxed at different times in different countries is a clear source of difficulties.

7. Typically, a country may tax the benefits resulting from an employee stock-option plan at one or more of the following events:[7]

- when the option is granted;
- when the option vests or irrevocably vests;
- when the option is exercised or otherwise disposed of;
- when there are no longer any restrictions on the sale of the shares acquired under the option; or
- when the shares acquired under the option are sold.[8]

8. Also, the same country may tax different parts of the benefits at different times. One example would be where one part of the benefit is taxed at the time the option is granted and another part at the time the shares are sold; another example would be where the "in the money" portion of the benefit related to a stock-option is taxed earlier than the residual benefit (*i.e.* the benefit that represents the increase in the value of the share after the option was granted).

9. Clearly, where different countries tax the benefits of ESOPs at different times, this may result in the usual problem of relieving double taxation when the States of residence and source do not tax at the same time (problems which are partly addressed by carry-forward or carry-back of foreign tax credits).

10. This timing difference may also result in questions as to whether relief should be given at all and if yes, on what income. For instance, if the State of residence does not tax stock-options but considers instead that the whole amount of a gain realised upon the sale of the shares is a capital gain, it may be reluctant to exempt the income taxed in the State of source on a different event (*e.g.* the exercise of the option) or to grant a credit for that tax. Even if the State of residence agrees to give a credit, it will usually restrict the credit to the amount of domestic tax levied on the same income, which would require it to identify the portion of what it views as a capital gain that corresponds to what has been taxed by the State of source.

11. The following example may be used to illustrate the problems arising from taxation at different times:

> *Example:* Employee E, who is a resident of State A, worked seven months in State B. Part of the remuneration that E derived from his employment in State B was stock-options of company Y, a resident of State B. Under State B law, the employment benefit resulting from stock-options is taxed when the shares are sold and is deemed to correspond to the difference between the sale price of the shares and the strike price (the amount paid by the employee). In State A, the employment benefit resulting from stock-options corresponds to the difference between the value of the shares when the option is exercised and the amount paid by

the employee; that benefit is taxed when the option is exercised. E exercises the option in year 1, when he is taxed in State A. He sells the shares in year 3, when State B taxes him on the gain.

12. Article 15 allows the State of source to tax not only income from employment which is paid, credited or otherwise definitively acquired when the employee is present therein but also any income obtained or realised before or after such presence that is derived from the services performed in the State of source. The condition in Article 15 for taxation by the State of source is that the income concerned is derived from the exercise of employment in that State, regardless of when that income may be paid, credited etc. State B can therefore tax the gain in accordance with Article 15. However, State B will levy that tax upon the sale of the shares. Since State A will have already taxed the same benefit two years earlier, how will relief from double taxation be granted? Also, will State A be able to argue that State B has taxed a different event so as to deny relief? Finally, should State A attempt to determine which part of the tax levied by State B corresponds to what it taxes (*i.e.* the difference between the strike price and the value of the share at the time that the option was exercised)?

13. An additional problem may arise if the domestic law of State A sources the benefit from the exercise of the stock-option to State A and not to State B. In that case, however, if State A recognises State B's right to tax the benefit under the State A-State B tax convention, State A (the State of residence) must recognise State B's (the State of source) right to tax the benefit under the sourcing rules of the convention entered into by these two States. The rules of the convention concerning elimination of double taxation (if they are based on the OECD Model) will then effectively require State A to exempt or to give a credit even if its domestic law sources the income differently (as explained in section III of the report on the Application of the OECD Model Tax Convention to Partnerships).

14. As explained in the previous paragraphs, the different country rules for taxing stock-options create risks of double taxation. While it may be argued that the same risk arises with respect to any part of an employee's remuneration, including his salary, the fact is that it is more likely to be a problem in the case of stock-options. This is because stock-options are often taxed at a time (*e.g.* when the option is exercised or the shares sold) that is very different from the time when the employment services are rendered.

15. The problem of relieving double taxation when the States of residence and source do not tax stock-options at the same time is partly addressed by the fact that the application of the relief of double taxation provisions of the OECD Model Convention is not restricted in time, *i.e.* relief must be given even if the State of residence taxes at a different time than the State of source. This,

however, may not solve the issue as regards the countries that do not follow Article 23 A or 23 B of the Model Tax Convention, for instance because they link the relief of double taxation that they give under tax conventions to what is provided under their domestic laws. These countries, however, would be expected to seek other ways to relieve the double taxation which might otherwise arise.

16. The other issue discussed in paragraph 10 arises where the State of residence and the State of source not only tax at different times but, in so doing, also characterise the benefit differently (capital gain or employment income). That issue is discussed in the section below.

17. Based on that analysis, the Committee concluded that the following changes should be made to the Commentary on the Model Tax Convention:

Add the following paragraph 2.2 to the Commentary on Article 15:

2.2 The condition provided by the Article for taxation by the State of source is that the salaries, wages or other similar remuneration be derived from the exercise of employment in that State. This applies regardless of when that income may be paid to, credited to or otherwise definitively acquired by the employee.

Add the following heading and paragraphs 12 and 12.1 to the Commentary on Article 15:

The treatment of employee stock-options

12. The different country rules for taxing employee stock-options create particular problems which are discussed below. While many of these problems arise with respect to other forms of employee remuneration, particularly those that are based on the value of shares of the employer or a related company, they are particularly acute in the case of stock-options. This is largely due to the fact that stock-options are often taxed at a time (*e.g.* when the option is exercised or the shares sold) that is different from the time when the employment services that are remunerated through these options are rendered.

12.1 As noted in paragraph 2.2, the Article allows the State of source to tax the part of the stock-option benefit that constitutes remuneration derived from employment exercised in that State even if the tax is levied at a later time when the employee is no longer employed in that State.

Add the following paragraph 32.8 to the Commentary on Articles 23 A and 23 B:

F. Timing Mismatch

32.8 The provisions of the Convention that allow the State of source to tax particular items of income or capital do not provide any restriction as to when such tax is to be levied (see, for instance, paragraph 2.2 of the

Commentary on Article 15). Since both Articles 23 A and 23 B require that relief be granted where an item of income or capital may be taxed by the State of source in accordance with the provisions of the Convention, it follows that such relief must be provided regardless of when the tax is levied by the State of source. The State of residence must therefore provide relief of double taxation through the credit or exemption method with respect to such item of income or capital even though the State of source taxes it in an earlier or later year. Some States, however, do not follow the wording of Article 23 A or 23 B in their bilateral conventions and link the relief of double taxation that they give under tax conventions to what is provided under their domestic laws. These countries, however, would be expected to seek other ways (the mutual agreement procedure, for example) to relieve the double taxation which might otherwise arise in cases where the State of source levies tax in a different taxation year.

Distinguishing employment income from capital gains

18. There is no doubt that a stock-option provided as part of an employment package falls within the words "salaries, wages and other similar remuneration", even when it is granted by a company which is not the employer of the recipient (*e.g.* when the ESOP covers employees of subsidiaries).[9] While it is clear that the granting of an employee stock-option constitutes part of the remuneration of the employee for purposes of Article 15, some commentators have considered that the holding and subsequent exercise of the option constitute investment decisions and that the gain represented by the difference between the value of the option at the time it is exercised and the value of the option at the time it was granted constitutes a capital gain falling under Article 13, which does not allow source taxation of the gain, rather than under Article 15, which would. Others have suggested that this analysis should only apply to the part of the gain that accrues after the option has vested since the employee cannot make an investment decision to keep or exercise the option before that time. It has also been suggested, however, that any benefit derived from the option, including any gain realised upon the sale of shares acquired with that option, should be considered as employment income as the employee exercised the option and acquired the share solely because he was remunerated with that option.

19. If countries were to adopt different interpretations on this matter, the resulting conflicts of interpretation would create double taxation or dual exemption situations. Apart from this possible conflict of interpretation, a conflict of qualification[10] could arise between a country taxing a stock-option at the time of granting and one taxing it at the time of exercising. The first State could conclude that, under its domestic law, the amount of the capital

gain realised upon the sale of the shares which falls under Article 13 (and is therefore not taxable in the State of source) is the difference between the sale price and the total of the strike price and the value of the option when it was granted. The latter State, however, would consider that the capital gain would only be the part of the gain that exceeds the value of the share at the time of exercising the option. To the extent that the first State would agree that the latter State's view does not violate the treaty, this would be a conflict of qualification within the meaning of Section III of the report on the Application of the Model Tax Convention to Partnerships and should be dealt with and solved according to the principles described in paragraphs 32.1 to 32.7 of the Commentary on Articles 23 A and 23 B. Thus, since the first State agrees that the latter State's taxation does not violate the treaty, that taxation must be considered to be "in accordance with the provisions of the Convention" and the first State must provide relief (to the extent that the Article on elimination of double taxation of the relevant Convention is based on the wording of the Model Tax Convention).

20. The issue of whether a benefit is a capital gain or employment income also arises with respect to gains realised upon the alienation of stock-options by an employee. Such alienation could occur if the options are sold or upon their cancellation or acquisition by the employer (*e.g.* on termination of employment or on replacement of the option).

21. Treaty mismatches resulting in double taxation or non-taxation are especially likely to occur where a country treats the entire benefit from an employee stock-option as a capital gain since a majority of countries would consider all or at least part of that benefit as employment income.

22. The fact that a large number of countries tax as employment income the whole gain realised at the time of exercising the option (*i.e.* the difference between the market value of the shares at that time and the amount paid by the employee to acquire them), indicates that these countries consider that, for the purposes of Articles 13 and 15, the dividing line is the moment when the option is exercised and the employee becomes a shareholder.

23. The Committee agreed that this view derived from the practice followed by many countries was the most appropriate one. Not only is it practical to adopt the date of exercise as the dividing line between employment income and capital gain but it also appears right to consider that the employee should be treated as an investor only from the time that he acquires the quality of shareholder and invests money in order to do so. The Committee therefore agreed that any benefit accruing in relation to the stock-option up to the time when the option is exercised, sold or otherwise alienated should be treated as income from employment to which Article 15 applies.

24. The Committee also agreed that the benefits resulting from an employee stock-option could not, as a general rule, fall under either Article 21 or Article 18 even if the option was exercised after termination of the employment or retirement. Article 21, by its residual nature, will not apply since either Article 13 or 15 will apply. Article 18 deals only with pensions and other similar remuneration and these words do not cover employee stock-options. Thus, for instance, if an option that became exercisable before an employee retired is exercised after that employee's retirement, Article 18 will not apply to the benefit derived from the option.

25. The following example illustrates the conclusions reached by the Committee:

> *Example*: Employee E is resident and working in State A on 1 January 1998. He is granted an option to purchase shares for a price of 1, conditional on remaining in that employment at least until 1 January 2001. On 31 December 1999 he moves to work in State B, where he becomes a resident. He exercises the option on 1 January 2001 when the market value of the shares acquired is 7 but does not sell any shares until 31 December 2002, when the market value is 9. Both State A and State B tax at exercise and State B also taxes when the shares acquired are sold.
>
> The gain that arises between the grant of the option and the date of vesting and exercise, *i.e.* 6, should be regarded as income from employment covered by Article 15. State A may tax the part of the stock-option benefit that was derived from employment carried on there. If each working year is 260 days, then State A may tax of this gain, *i.e.* 4 (this results from the conclusions presented in the section below which deals with the determination of the employment services to which the option relates). State B should provide relief for this tax, either by an exemption or credit method. But once the stock-option has been exercised, then the employee is in the same position as any other shareholder. The gain that relates to the period between acquisition and sale of the shares acquired under the option will fall under Article 13 and State B, as the State of residence, will therefore have sole taxing rights on this gain.

26. The Committee therefore decided that these conclusions should be incorporated in the Model Tax Convention through the following changes:

Add the following paragraph 32 to the Commentary on Article 13:

> 32. There is a need to distinguish the capital gain that may be derived from the alienation of shares acquired upon the exercise of a stock-option granted to an employee or member of a board of directors from the benefit derived from the stock-option that is covered by Articles 15

or 16. The principles on which that distinction is based are discussed in paragraphs 12.2 to 12.5 of the Commentary on Article 15 and paragraph 3.1 of the Commentary on Article 16.

*Replace paragraph 2.1 of the Commentary on Article 15 by the following (changes to the existing text appear in **bold italics**):*

2.1 Member countries have generally understood the term 'salaries, wages and other similar remuneration' to include benefits in kind received in respect of an employment (*e.g.* ***stock-options***, the use of a residence or automobile, health or life insurance coverage and club memberships).

Add the following paragraphs 12.2 to 12.5 to the Commentary on Article 15:

12.2 While the Article applies to the employment benefit derived from a stock-option granted to an employee regardless of when that benefit is taxed, there is a need to distinguish that employment benefit from the capital gain that may be derived from the alienation of shares acquired upon the exercise of the option. This Article, and not Article 13, will apply to any benefit derived from the option itself until it has been exercised, sold or otherwise alienated (*e.g.* upon cancellation or acquisition by the employer or issuer). Once the option is exercised or alienated, however, the employment benefit has been realized and any subsequent gain on the acquired shares (*i.e.* the value of the shares that accrues after exercise) will be derived by the employee in his capacity of investor-shareholder and will be covered by Article 13. Indeed, it is at the time of exercise that the option, which is what the employee obtained from his employment, disappears and the recipient obtains the status of shareholder (and usually invests money in order to do so). Where, however, the option that has been exercised entitles the employee to acquire shares that will not irrevocably vest until the end of a period of required employment, it will be appropriate to apply this Article to the increase in value, if any, until the end of the required period of employment that is subsequent to the exercise of the option.

12.3 The fact that the Article does not apply to a benefit derived after the exercise or alienation of the option does not imply in any way that taxation of the employment income under domestic law must occur at the time of that exercise or alienation. As already noted, the Article does not impose any restriction as to when the relevant income may be taxed by the State of source. Thus, the State of source could tax the relevant income at the time the option is granted, at the time the option is exercised (or alienated), at the time the share is sold or at any other time. The State of source, however, may only tax the benefits attributable to the option itself and not what is attributable to the subsequent holding

of shares acquired upon the exercise of that option (except in the circumstances described in the last sentence of the preceding paragraph).

12.4 Since paragraph 1 must be interpreted to apply to any benefit derived from the option until it has been exercised, sold or otherwise alienated, it does not matter how such benefit, or any part thereof, is characterized for domestic tax purposes. As a result, whilst the Article will be interpreted to allow the State of source to tax the benefits accruing up to the time when the option has been exercised, sold or otherwise alienated, it will be left to that State to decide how to tax such benefits, *e.g.* as either employment income or capital gain. If the State of source decides, for example, to impose a capital gains tax on the option when the employee ceases to be a resident of that country, that tax will be allowed under the Article. The same will be true in the State of residence. For example, while that State will have sole taxation right on the increase of value of the share obtained after exercise since this will be considered to fall under Article 13 of the Convention, it may well decide to tax such increase as employment income rather than as a capital gain under its domestic law.

12.5 The benefits resulting from a stock-option granted to an employee will not, as a general rule, fall under either Article 21, which does not apply to income covered by other Articles, or Article 18, which only applies to pension and other similar remuneration, even if the option is exercised after termination of the employment or retirement.

Difficulty in determining to which services the option relates

27. Subject to the exception in its paragraph 2, Article 15 allows the State of source to tax remuneration that is derived from services exercised therein. In many cases, it can be difficult to determine to which services the granting of a stock-option relates. In some cases, an option may be regarded as rewarding previous performance, in others as an incentive for future performance.

28. The contractual arrangements would certainly be relevant in that respect. For instance, conditions under which an employee would be prevented from exercising an option unless he remained with the company for a certain period of time would suggest that the option rewards future services. Conversely, the fact that an option is granted to all employees who were employed during a certain period, that options are granted on the basis of past performance, that it is not possible for an employee to lose the benefit of options granted or that the number of options granted depends on the financial results of a previous accounting year could support the opposite view.

> *Example:* Employee E, who is a resident of State A, is an employee of a company Y, a resident of State A which has a permanent establishment in State B. From 1990 and until 31 December 1997, E worked in State A. In 1998, he worked in State B for the permanent establishment situated therein, without becoming a resident of State B for purposes of the State A-State B tax convention. On 1 January 1999, he came back to State A. On 31 March 1999, E receives a stock-option under company Y stock-option plan. Under that plan, options are given on 31 March each year to individuals who were employed throughout the previous year. Options are only granted if the company has made profits during the previous financial year. These options are valid for 5 years but may not be exercised within 24 months after they have been granted and are only irrevocably acquired by E if he remains an employee during that period of 24 months. On 20 June 2001, E exercises the option. At that time, State B decides to tax as employment income related to the 1998 taxation year the difference between the amount paid by E and the market value of the shares at that time. State A, however, considers that the stock-option does not relate to E's period of employment in State B.

29. In that situation, the conflict between States A and B can be seen as either a conflict of facts (the States disagree as to whether the option relates to the period of employment in State B or not) or of interpretation of Article 15 (the States disagree as to the meaning of the words [found in Article 15] "remuneration derived from employment exercised in a State"). In both cases, the principles developed in section III of the report on the Application of the Model Tax Convention to Partnerships to deal with conflicts of qualification would not resolve the issue since there is no agreement that the State of source has levied tax "in accordance with the provisions of the Convention".

30. The Committee discussed extensively how this issue should be handled and concluded that the best approach that could be achieved would be to provide, in the Commentary on Article 15, a general set of principles that could be applied based on the facts and circumstances of each case, including the relevant contractual arrangements. It therefore decided to add the following paragraphs 12.6 to 12.13 to the Commentary on Article 15:

> 12.6 Paragraph 1 allows the State of source to tax salaries, wages and other similar remuneration derived from employment exercised in that State. The determination of whether and to what extent an employee stock-option is derived from employment exercised in a particular State must be done in each case on the basis of all the relevant facts and circumstances, including the contractual conditions associated with that option (*e.g.* the conditions under which the option granted may be

exercised or disposed of). The following general principles should be followed for that purpose.

12.7 The first principle is that, as a general rule, an employee stock-option should not be considered to relate to any services rendered after the period of employment that is required as a condition for the employee to acquire the right to exercise that option. Thus, where a stock-option is granted to an employee on the condition that he provides employment services to the same employer (or an associated enterprise) for a period of three years, the employment benefit derived from that option should generally not be attributed to services performed after that three-year period.

12.8 In applying the above principle, however, it is important to distinguish between a period of employment that is required to obtain the right to exercise an employee stock-option and a period of time that is merely a delay before such option may be exercised (a blocking period). Thus, for example, an option that is granted to an employee on the condition that he remains employed by the same employer (or an associated enterprise) during a period of three years can be considered to be derived from the services performed during these three years while an option that is granted, without any condition of subsequent employment, to an employee on a given date but which, under its terms and conditions, can only be exercised after a delay of three years, should not be considered to relate to the employment performed during these years as the benefit of such an option would accrue to its recipient even if he were to leave his employment immediately after receiving it and waited the required three years before exercising it.

12.9 It is also important to distinguish between a situation where a period of employment is required as a condition for the acquisition of the right to exercise an option, *i.e.* the vesting of the option, and a situation where an option that has already vested may be forfeited if it is not exercised before employment is terminated (or within a short period after). In the latter situation, the benefit of the option should not be considered to relate to services rendered after vesting since the employee has already obtained the benefit and could in fact realise it at any time. A condition under which the vested option may be forfeited if employment is terminated is not a condition for the acquisition of the benefit but, rather, one under which the benefit already acquired may subsequently be lost. The following examples illustrate this distinction:

> *Example 1:* On 1 January of year 1, a stock-option is granted to an employee. The acquisition of the option is conditional on the employee continuing to be employed by the same employer until

MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

1 January of year 3. The option, once this condition is met, will be exercisable from 1 January of year 3 until 1 January of year 10 (a so-called "American" option).[11] It is further provided, however, that any option not previously exercised will be lost upon cessation of employment. In that example, the right to exercise that option has been acquired on 1 January of year 3 (*i.e.* the date of vesting) since no further period of employment is then required for the employee to obtain the right to exercise the option.

Example 2: On 1 January of year 1, a stock-option is granted to an employee. The option is exercisable on 1 January of year 5 (a so-called "European" option). The option has been granted subject to the condition that it can only be exercised on 1 January of year 5 if employment is not terminated before that date. In that example, the right to exercise that option is not acquired until 1 January of year 5, which is the date of exercise, since employment until that date is required to acquire the right to exercise the option (*i.e.* for the option to vest).

12.10 There are cases where that first principle might not apply. One such case could be where the stock-option is granted without any condition to an employee at the time he either takes up an employment, is transferred to a new country or is given significant new responsibilities and, in each case, the option clearly relates to the new functions to be performed by the employee during a specific future period. In that case, it may be appropriate to consider that the option relates to these new functions even if the right to exercise the option is acquired before these are performed. There are also cases where an option vested technically but where that option entitles the employee to acquire shares which will not vest until the end of a period of required employment. In such cases, it may be appropriate to consider that the benefit of the option relates to the services rendered in the whole period between the grant of the option and the vesting of the shares.

12.11 The second principle is that an employee stock-option should only be considered to relate to services rendered before the time when it is granted to the extent that such grant is intended to reward the provision of such services by the recipient for a specific period. This would be the case, for example, where the remuneration is demonstrably based on the employee's past performance during a certain period or is based on the employer's past financial results and is conditional on the employee having been employed by the employer or an associated enterprise during the specific period to which these financial results relate. Also, in some cases, there may be objective evidence demonstrating that during a specific period of past employment, there was a well-founded

expectation among participants to an employee stock-option plan that part of their remuneration for that period would be provided through the plan by having stock-options granted at a later date. This evidence might include, for example, the consistent practice of an employer that has granted similar levels of stock-options over a number of years, as long as there was no indication that this practice might be discontinued. Depending on other factors, such evidence may be highly relevant for purposes of determining if and to what extent the stock-option relates to such a period of past employment.

12.12 Where a period of employment is required to obtain the right to exercise an employee's stock-option but such requirement is not applied in certain circumstances, *e.g.* where the employment is terminated by the employer or where the employee reaches retirement age, the stock-option benefit should be considered to relate only to the period of services actually performed when these circumstances have in fact occurred.

12.13 Finally, there may be situations in which some factors may suggest that an employee stock-option is rewarding past services but other factors seem to indicate that it relates to future services. In cases of doubt, it should be recognised that employee stock-options are generally provided as an incentive to future performance or as a way to retain valuable employees. Thus, employee stock-options are primarily related to future services. However, all relevant facts and circumstances will need to be taken into account before such a determination can be made and there may be cases where it can be shown that a stock-option is related to combined specific periods of previous and future services (*e.g.* options are granted on the basis of the employee having achieved specific performance targets for the previous year, but they become exercisable only if the employee remains employed for another three years).

Employment services that are provided in more than one State

31. Where the employment services to which a stock-option relates have been provided in more than one State, an allocation rule is necessary for purposes of the application of Article 15 and Articles 23 A and 23 B.

32. A logical allocation method would be to consider that the employment benefit attributable to a stock-option has to be attributed to services performed in a particular country in the proportion of the number of days during which employment has been exercised[12] in that country to the total number of days during which the employment from which the stock-option is derived has been exercised.[13]

Example: An employee stock-option relates to a period of 3 years of employment (each year has 220 working days). During year 1, the employee is a resident of State A (the country of which the employer is a resident) but provides services during 110 days in State B (his presence there exceeds 183 days, which gives that country source taxing rights) and during 20 days in State C (because the employee's presence does not exceed 183 days and the other conditions of paragraph 2 of Article 15 are fulfilled, State C does not have source taxing rights under Article 15 of the A-C treaty). During years 2 and 3, he is a resident of State D where he provides all his services.

33. In that case, 90/660 of the benefit should be allocated to the services rendered in State A, 110/660 to the services rendered in State B, 20/660 to the services rendered in State C and 440/660 to the services rendered in State D. This allocation applies for purposes of determining to what extent the stock-option benefit is derived from services rendered in each State. This is necessary for the purpose of determining the extent to which Article 15 gives taxing rights to the State of source as well as for the purpose of determining on what part of the benefit the State of residence must provide relief of double taxation under Article 23. Any part of the benefit that is allocated to services rendered in a State that is precluded from taxing under paragraph 2 of Article 15 of the Convention (*e.g.* State C in the above example) will therefore not be considered to be attributable to services rendered in another State (*e.g.* State A, B or D in the example) even if it cannot be taxed in the State to which it is attributed. However, while the allocation will be used for purposes of determining on which part of the income the State of residence is obliged to give credit, it will not operate to restrict the taxing rights of that State except, of course, if such restriction results from the fact that relief of double taxation is provided through the exemption method. As explained in the section that deals with multiple residence taxation (see below), this allocation will not, therefore, be sufficient to avoid the double taxation that can result from timing mismatches in the taxation of stock-options by different States of residence.

34. The Committee agreed that the above allocation method would be the most appropriate one. It therefore decided to add the following paragraph 12.14 to the Commentary on Article 15:

12.14 Where, based on the preceding principles, a stock-option is considered to be derived from employment exercised in more than one State, it will be necessary to determine which part of the stock-option benefit is derived from employment exercised in each State for purposes of the application of the Article and of Articles 23 A and 23 B. In such a case, the employment benefit attributable to the stock-option should be considered to be derived from a particular country in proportion of the

number of days during which employment has been exercised in that country to the total number of days during which the employment services from which the stock-option is derived has been exercised. For that purpose, the only days of employment that should be taken into account are those that are relevant for the stock-option plan, *e.g.* those during which services are rendered to the same employer or to other employers the employment by whom would be taken into account to satisfy a period of employment required to acquire the right to exercise the option.

35. The following two examples illustrate the effect of this paragraph :

Example 1: Employee E is resident and working in State A on 1 January 1998. He is granted an option to purchase shares for a price of 1, conditional on remaining in that employment until at least 1 January 2001. On 31 December 1999 he moves to work in State B, of which he becomes a resident. He exercises the option on 1 July 2001 when the market value of the shares acquired is 8 and sells all the shares so acquired immediately. The benefit from the stock-option should be regarded as income from employment covered by Article 15. State A may tax the part of the stock-option benefit that was derived from employment carried on there, but only as a proportion of those days that were relevant for the stock-option plan. If each working year is 260 days, then the days relevant to the stock-option plan total 780 (3 x 260). State A may tax 520 (2 x 260) days of this as deriving from employment carried on there, *i.e.* 66.7% and State B may tax 260 days as deriving from employment exercised in State B. The remaining 130 days of employment between the date of vesting and exercise were not relevant to the stock-option plan and are therefore ignored.

Example 2: Employee E is resident and working in State A on 1st January 1998. He is granted an option to purchase shares for a price of 1, conditional on remaining in that employment until at least 1st January 2001. On 31st December 1999 he moves to work in State B. Due to ill health, he terminates his employment on 30th June 2000 but is allowed to keep the option. He actually exercises it on 1st January 2001 when the market value is 7. If each working year is 260 days, then the days relevant to the stock-option plan total only 650 (2½ x 260) and this is the whole period of employment. State A may tax 520 (2 x 260) days out of this total 650 as deriving from employment carried on in State A, *i.e.* 80%.

36. The Committee also agreed that Contracting States should be free to agree bilaterally to adopt other approaches for the determination of whether and to what extent a particular employee stock-option is derived from employment services rendered in a particular State, keeping in mind that such

departures may create difficulties in situations where other States are involved. It therefore decided to add the following paragraph 12.15 to the Commentary on Article 15:

> 12.15 It is possible for member countries to depart from the case-by-case application of the above principles (in paragraphs 12.7 to 12.14) by agreeing to a specific approach in a bilateral context. For example, two countries that tax predominantly at exercise of an option may agree, as a general principle, to attribute the income from an option that relates primarily to future services to the services performed by an employee in the two States between date of grant and date of exercise. Thus, in the case of options that do not become exercisable until the employee has performed services for the employer for a specific period of time, two States could agree to an approach that attributes the income from the option to each State based on the number of days worked in each State by the employee for the employer in the period between date of grant and date of exercise. Another example would be for two countries that have similar rules for the tax treatment of employee stock-options to adopt provisions that would give to one of the Contracting States exclusive taxation rights on the employment benefit even if a minor part of the employment services to which the option relates have been rendered in the other State. Of course, member countries should be careful in adopting such approaches because they may result in double taxation or double non-taxation if part of the employment is exercised in a third State that does not apply a similar approach.

Multiple residence taxation

37. While the preceding comments have focussed primarily on residence-source issues, situations where the benefits from employee stock-options are subject to tax in more than one State do not arise only, and maybe not primarily, because of the source and residence taxation of stock-options. Where an employee who is a resident of one State is taxed as a non-resident in another State, Article 23 provides relief from any double taxation. However, an employee might reside in different countries at the time an option is granted, the time it vests, the time it is exercised and the time the shares acquired with the option are sold. All of these countries may claim the right to tax as States of residence and if each of them has a system that taxes the benefit from the stock-option at the time the taxpayer is a resident of that country,[14] there will be multiple residence taxation. While Article 23 deals with residence-source double taxation, it does not provide relief for all cases of residence-residence double taxation. The risks of multiple residence taxation may be compounded in the case of countries that have a "departure tax" on capital gains, *i.e.* countries that deem capital gains to be realised when

a person ceases to be a resident or that maintain, through their tax conventions, a right to tax capital gains of former residents.

38. The example already used in the section entitled "Difficulty in determining to which services the option relates" may serve to illustrate the limits of the relief of double taxation provided by tax conventions in cases of residence-residence double taxation.

> *Example:* An employee stock-option relates to a period of 3 years of employment (each year has 220 working days). During year 1, the employee is a resident of State A (the country of which the employer is a resident) but provides services during 110 days in State B (his presence there exceeds 183 days, which gives that country source taxing rights) and during 20 days in State C (because the employee's presence does not exceed 183 days and the other conditions of paragraph 2 of Article 15 are fulfilled, State C does not have source taxing rights under Article 15 of the A-C treaty). During years 2 and 3, he is a resident of State D where he provides all his services.

39. As already discussed, it would seem appropriate to consider that, in that case, 90/660 of the benefit should be allocated to the services rendered in State A, 110/660 to the services rendered in State B, 20/660 to the services rendered in State C and 440/660 to the services rendered in State D.

40. In the above example, State A will therefore be entitled, under each of the A-B, A-C and A-D treaties, to tax the whole of the employment benefit from the stock-option provided that it does so while the employee is a resident of State A (which it will do if it taxes at grant). In that case, however, it will be obliged to provide relief of double taxation as regards the taxation, by State B, of 110/660 of the benefit and the taxation, by State D, of 440/660 of the benefit (these parts correspond to the services rendered in these States for which Article 15 of the A-B and A-D treaties gives source taxing rights to these States). As a State of source, State B will only be entitled to tax 110/660 of the benefit under the A-B and B-D treaties. Both the A-C and C-D treaties will prevent State C from taxing any part of the benefit. Finally, under each of the A-D, B-D and C-D treaties, State D will be entitled to tax the whole of the benefit as a State of residence as long as it does so while the taxpayer qualifies as a resident of State D. In that case, State D will be obliged to provide relief of double taxation as regards the taxation, by State A, of 90/660 of the benefit and the taxation, by State B, of 110/660 of the benefit.

41. In this example, if State A taxes the employment benefit at grant while State D taxes it at exercise, State A will thus have taxed the whole benefit in year 1 while State D will have done the same in year 3. Article 15 of the A-D treaty will not restrict either State's right to tax any part of the benefit since the taxpayer is a resident of each State when that State considers the income

to be derived and therefore applies the Article, *i.e.* at the time of grant (year 1) for State A and at the time of exercise (year 3) for State D.

42. Of course, Article 23 of the A-D convention will then require each State to provide relief of double taxation, through the credit or exemption method, as regards the tax that the other State has levied on the part of the employment benefit that relates to the services performed in that other State and which that other State has the right to tax as a State of source. Thus State A will be required to provide relief for the tax levied by State D on the part of the benefit that relates to the services rendered in State D in year 2 and 3 (440/660 of the benefit). Conversely, State D will be required to provide relief for the tax levied by State A on the part of the benefit that relates to services rendered in State A in year 1 (90/660 of the benefit).

43. The result will be that neither State A nor State D will provide relief for taxes levied in the other Contracting State on the part of the benefit that relates to services provided in State B (110/660 of the benefit) or in State C (20/660 of the benefit). Since both State A and State D will themselves provide relief for tax levied by State B (the State of source), double taxation will arise with respect to the part of the benefit that relates to services rendered in State B only if both States A and D are credit countries and the tax levied by each on such benefit exceeds that levied by State B. The double taxation situation is more serious as regards State C. In that case, both States A and D have full taxation rights (as the State of residence) and, since State C is the State of source (with no source taxation rights), neither State A nor State D is required to provide relief for taxes levied in the other contracting state. Thus, there is full unrelieved double taxation by States A and D on the part of the benefit that relates to services rendered in State C.

> *Example:* 1) State B levies tax of $35 while State A and State D both levy $40 on the part of the benefit that relates to employment services rendered in State B. State A will provide $35 relief under the A-B treaty and State D will provide $35 relief under the B-D treaty. The employee will hence be taxed $45 ($35 + $40 + $40 - $35 - $35), with an unrelieved double tax of $5 (the overlap of the amounts of tax levied by State A and State D in excess of that levied by State B).
>
> *Example:* 2) State C does not levy any tax on the part of the benefit that relates to employment services rendered in State C while State A and State D each levy $40 on that part of the benefit. State A will not provide any relief under the A-C treaty and State D will also not provide any relief under the D-C treaty. The employee will hence be taxed $80 ($40 + $40), with an unrelieved double tax of $40.

44. It could be argued that State D is required to provide relief for the tax levied by State A on the part of the benefit that relates to services rendered in

States B and C because that tax has been levied by State A in accordance with the A-D Convention since nothing in that Convention prevents State A from taxing the employee on the basis of his residence when the option is granted. That interpretation, however, produces an absurd result as it would similarly require State A to provide relief for the tax that State D has levied on the same part of the benefit. Clearly, an interpretation that requires each of the two Contracting States to provide relief for the other State's tax on the same income must be rejected.

45. The example above shows that there are cases where Article 23 would not relieve residence-residence double taxation of the employment benefit arising from an employee stock-option. The mutual agreement procedure could, however, be used to deal with such cases. One possible basis to solve such cases would be for the competent authorities of the two States to agree that each State should provide relief as regards the residence-based tax that was levied by the other State on the part of the benefit that relates to services rendered during the period while the employee was a resident of that other State. Thus, in the above example, it would be logical for State D's competent authority to agree to provide relief (either through a credit or exemption method) for the State A's tax that has been levied on the part of the benefit that relates to services rendered in States B and C since, at the time when these services were rendered, the taxpayer was a resident of State A and not of State D for purposes of the A-D Convention.

46. The Committee agreed that the Commentary should be modified to recommend that approach to deal with cases of unrelieved residence-residence double taxation. It therefore decided to add the following paragraphs 4.1 to 4.3 the Commentary on Articles 23 A and 23 B:

> 4.1 Article 4, however, only deals with cases of concurrent full liability to tax. The conflict in case *a*) may therefore not be solved if the same item of income is subject to the full liability to tax of two countries but at different times. The following example illustrates that problem. Assume that a resident of State R1 derives a taxable benefit from an employee stock-option that is granted to that person. State R1 taxes that benefit when the option is granted. The person subsequently becomes a resident of State R2, which taxes the benefit at the time of its subsequent exercise. In that case, the person is taxed by each State at a time when he is a resident of that State and Article 4 does not deal with the issue as there is no concurrent residence in the two States.
>
> 4.2 The conflict in that situation will be reduced to that of case *b*) and solved accordingly to the extent that the employment services to which the option relates have been rendered in one of the Contracting States so as to be taxable by that State under Article 15 because it is the State

where the relevant employment is exercised. Indeed, in such a case, the State in which the services have been rendered will be the State of source for purposes of elimination of double taxation by the other State. It does not matter that the first State does not levy tax at the same time (see paragraph 32.8). It also does not matter that the other State considers that it levies tax as a State of residence as opposed to a State of source (see the last sentence of paragraph 8).

4.3 Where, however, the relevant employment services have not been rendered in either State, the conflict will not be one of source-residence double taxation. The mutual agreement procedure could be used to deal with such a case. One possible basis to solve the case would be for the competent authorities of the two States to agree that each State should provide relief as regards the residence-based tax that was levied by the other State on the part of the benefit that relates to services rendered during the period while the employee was a resident of that other State. Thus, in the above example, if the relevant services were rendered in a third State before the person became a resident of State R2, it would be logical for the competent authority of State R2 to agree to provide relief (either through the credit or exemption method) for the State R1 tax that has been levied on the part of the employment benefit that relates to services rendered in the third State since, at the time when these services were rendered, the taxpayer was a resident of State R1 and not of State R2 for purposes of the convention between these two States.

Compliance issues

47. In practice, a significant part of the cross-border difficulties relating to ESOPs relates to compliance and administrative issues. Even if the various issues described above could be solved by clarifying what each country may tax and how relief of double taxation should be granted, this would still leave a significant administrative burden for tax administrations and a compliance burden on employees who reside or work successively in different countries. Taxing such employees requires tax administrations to properly determine to which services particular options relate and to take account of transactions in shares or options in foreign companies. As a number of countries and companies have experienced, options in shares of foreign parent companies granted to employees of local subsidiaries may give rise to significant administrative difficulties, particularly since the local employer, which is usually the information and collection point for salary taxation, may not be directly involved in the operation of the ESOP.

48. One particular problem to which enterprises are sometimes confronted is the requirement to withhold tax at source in two or more jurisdictions on the same or similar employment benefit resulting from a stock-option. For

example, if an employee has worked in two different countries during the period of services to which a stock-option relates, it may be that each of these countries will require the employer to withhold tax on the whole amount of the difference between the value of the underlying share and the exercise price when the option is exercised by the employee.

49. The compliance difficulties related to employee stock-options may be partly reduced by tax administrations making sure that their domestic rules applicable to the treatment of stock-options are clear and well understood by employers. In many countries, the treatment of employee stock-options depends on the interpretation of general rules or principles. Tax administrations should make sure that their interpretation of such rules or principles is easily accessible to taxpayers.

50. The problem described above in relation to withholding requirements can be alleviated if countries allow enterprises to adjust the amount of tax to be withheld to take account of any relief that will likely be available to the employee on account of double taxation as well as any relief provided for under a tax treaty. Since a majority of countries tax the employment benefit derived from an employee stock-option at exercise (or later), it would be possible to determine, at that point in time, whether or not some of the employment services to which the option relates have been rendered in one or more other countries so as to give rise to relief. Since the amount of tax to be paid in any such other country will probably not be determined at that time, it will not be possible to determine exactly how much relief for double taxation should be given by the State of residence that eliminates double taxation through the credit method. A reasonable approximation of the relief could, however, be used for purposes of the withholding tax requirements applicable at that time since, in this case, the employer of a State that taxes at exercise will know what is the period of time to which the employment benefit derived from the option relates and will also know, from the records kept for domestic wages tax purposes, the periods spent working overseas.

Alienation of stock-options as a result of a merger or acquisition and replacement of options

51. Following a merger or acquisition, it is possible that options to acquire shares of a merged or acquired company are replaced by options to acquire shares in a successor or acquiror company. This may result in an alienation of the stock-options for the employee in either his State of residence, a State which has the right to tax these stock-options because they were granted in relation to an employment exercised therein or both States. An inconsistent treatment could result in a timing mismatch for purposes of the elimination of double taxation. Also, if a State does not consider that stock-options granted to a resident employee would be alienated in the case of a purely

domestic merger or acquisition, it would seem logical to expect that a resident's employee's options to acquire shares in a foreign company would be similarly treated by that State in a purely foreign merger or acquisition.

> *Example:* Employee E, a resident of State A, has stock-options of company Y, a resident of State B. Company Y merges with company Z, also a resident of State B, to form new company YZ. In the process, all the stock-options of company Y are exchanged for stock-options of company YZ. While a domestic merger does not result in an alienation of the stock-options of resident employees in both States A and B, State A considers that the YZ merger results in an alienation of the stock-options that have been replaced.

52. A similar issue may arise when an option is replaced by another option or when substantial changes are made to the conditions attached to the option and the employee to which the original option was granted has moved to another country before such replacement or changes. Apart from the issue of the period of services covered by the replacement option (which is dealt with above), the replacement or changes may trigger an alienation of the option in one country but not in the other, with a possible risk of double taxation.

53. As long as States agree that the new or modified option replaces the previous one for purposes of determining to which period of employment services it relates, they should also agree that the two options should be treated as one for purposes of relief of double taxation. Thus, each State should consider that the tax paid to the other State on the employment benefit derived from either the original or the new or modified option is tax paid on the same option even if these States levy the tax at different times.

Valuation issues

54. An issue can arise from cases where there appears to be no gain (or a lesser gain) in the value of a share under the currency of one of the countries, while there appears to be a gain (or a greater gain) under the currency of the other country. That should not be a problem for the computation of the employment benefit derived from an employee stock-option as that benefit is typically computed based on a single transaction and the benefit can then be translated into another currency using a single exchange rate. The problem may arise, however, for the computation of the capital gain derived from the alienation of the shares or for the computation of any gain that would require the valuation of the option at two different times between which there may have been currency fluctuations. That problem, however, is a typical problem related to the computation of capital gains and is not specific to employee stock-options (see paragraphs 16 and 17 of the Commentary on Article 13).

The granting of stock-options to members of a board of directors

55. Article 16 of the Model Tax Convention provides that "[d]irectors' fees and other similar payments derived by a resident of a Contracting State in his capacity as a member of the board of directors of a company which is a resident of the other Contracting State may be taxed in that other State." Since the rules of Article 15 are drafted "subject to" those of Article 16, it is the latter Article that will apply to payments which are made to a director in his capacity as such notwithstanding the fact that, under the domestic law of certain States, a director of a company could conceivably be considered to be an employee of that company.

56. Thus, to the extent that stock-options are granted to a director in his capacity as such (as opposed to those which may be granted to the director by reason of employment functions exercised in another capacity), Article 16 clearly gives taxation rights to the State of residence of the company. Since the State of residence of the director will also have taxing rights (subject to providing relief of double taxation), many of the issues previously discussed in this note will also arise with respect to such options:

- to the extent that the State of residence of the director and the State of residence of the company may tax the benefit of the option at different times, the issues discussed under the section "timing mismatch in taxing the employment benefit" will potentially arise and should be dealt with as recommended in that section;
- the principles put forward in this note for distinguishing employment income from capital gains will equally be relevant for distinguishing director's fees and similar payments from capital gains;
- because the taxing rights allocated to the state of residence of the company under Article 16 do not depend on services being rendered in that State and extend to the whole of the benefit derived from a stock-option that can be considered to constitute directors' fees or similar payments, there will be no need to identify services to which the option may relate or to allocate the benefit between various countries in which services have been performed;
- the previously-discussed issues related to multiple residence taxation, compliance, valuation and alienation as a result of a merger, acquisition or replacement will also potentially arise in the case of stock-options granted to directors and should be dealt with as recommended in the relevant sections of this note.

57. For these reasons, the Committee decided to make the following changes to the Commentary on Article 16:

Replace paragraph 1.1 of the Commentary on Article 16 by the following (additions to the existing text appear in ***bold italics****):*

1.1 Member countries have generally understood the term 'fees and other similar payments' to include benefits in kind received by a person in that person's capacity as a member of the board of directors of a company (*e.g.* ***stock-options***, the use of a residence or automobile, health or life insurance coverage and club memberships).

Add the following paragraph 3.1 to the Commentary on Article 16:

3.1 Many of the issues discussed under paragraphs 12 to 12.15 of the Commentary on Article 15 in relation to stock-options granted to employees will also arise in the case of stock-options granted to members of the board of directors of companies. To the extent that stock-options are granted to a resident of a Contracting State in that person's capacity as a member of the board of directors of a company which is a resident of the other State, that other State will have the right to tax the part of the stock-option benefit that constitutes director's fees or a similar payment (see paragraph 1.1 above) even if the tax is levied at a later time when the person is no longer a member of that board. While the Article applies to the benefit derived from a stock-option granted to a member of the board of directors regardless of when that benefit is taxed, there is a need to distinguish that benefit from the capital gain that may be derived from the alienation of shares acquired upon the exercise of the option. This Article, and not Article 13, will apply to any benefit derived from the option itself until it has been exercised, sold or otherwise alienated (*e.g.* upon cancellation or acquisition by the company or issuer). Once the option is exercised or alienated, however, the benefit taxable under this Article has been realized and any subsequent gain on the acquired shares (*i.e.* the value of the shares that accrues after exercise) will be derived by the member of the board of directors in his capacity of investor-shareholder and will be covered by Article 13. Indeed, it is at the time of exercise that the option, which is what the director obtained in his capacity as such, disappears and the recipient obtains the status of shareholder (and usually invests money in order to do so).

ISSUES RELATED TO THE EMPLOYER

58. This section briefly analyses some issues that may arise from ESOPs in relation to the application of tax treaties to the tax situation of the employer. While tax treaty issues that arise in relation to employees will naturally result in compliance issues for employers, those are merely consequential to the issues described in the preceding section and are therefore not dealt with in this section.

Deductibility of the costs of ESOPs

59. The deduction of costs related to running an ESOP (*e.g.* legal, financial and accounting costs related to the plan) does not raise particular difficulties, at least when these costs are incurred by the employer.[15] However, different views exist with respect to the question of whether and to what extent the benefit to the employee results in deductible expenses for the employer.

60. The question of allowing a deduction where shares are issued pursuant to a stock-option is, however, purely a matter of domestic tax policy. While it is true that the fact that countries' rules vary in that respect may create difficulties and possible compliance problems, this is just another example of mismatches resulting from differences between countries' rules for computing profits, a matter that is generally not dealt with in tax treaties.

Remuneration "borne by" a permanent establishment

61. The issue of the deduction of costs is, however, relevant for purposes of the application of paragraph 2 *c*) of Article 15 of the OECD Model Tax Convention, *i.e.* to determine whether benefits are borne by a permanent establishment of the employer. Paragraph 7 of the Commentary on Article 15 indicates that the phrase "remuneration is not borne by a permanent establishment" must be interpreted to refer to remuneration that is not deductible in computing the profits of the permanent establishment. That paragraph should not be read as suggesting that remuneration paid in the form of stock-options cannot be viewed as borne by a permanent establishment merely because the State in which a permanent establishment is located does not allow a deduction where shares are issued pursuant to employee stock-options. In such a case, the absence of a deduction results from the nature of the payment and not from the fact that the payment is not incurred in relation to the permanent establishment. The fact that such a State will normally allow a deduction for the costs associated with the management of the stock-option plan where these costs are shown to relate to employment services provided to a permanent establishment situated in that State indicates that the conditions of paragraph 2 *c*) will be met in relation to that remuneration. In order to clarify that point, the Committee recommends that paragraph 7 of the Commentary on Article 15 be amended as follows (changes appear in ***bold italics*** for additions and ~~strikethrough~~ for deletions):

> 7. Under the third condition, if the employer has ***a permanent establishment*** in the State in which the employment is exercised ~~a permanent establishment~~, the exemption is given ~~only~~ on condition that the remuneration is not borne by ***that*** ~~a~~ permanent establishment ~~which he has in that State~~. The phrase "borne by" must be interpreted in the light of the underlying purpose of subparagraph *c*) of the Article,

which is to ensure that the exception provided for in paragraph 2 does not apply to remuneration that ~~is deductible~~ ***could give rise to a deduction***, having regard to the principles of Article 7 ***and the nature of the remuneration***, in computing the profits of a permanent establishment situated in the State in which the employment is exercised. In this regard, it must be noted that the fact that the employer has, or has not, actually ~~deducted the~~ ***claimed a deduction for the*** remuneration in computing the profits attributable to the permanent establishment is not necessarily conclusive since the proper test is whether ***any deduction otherwise available for that remuneration would be allocated to the permanent establishment*** ~~the remuneration would be allowed as a deduction for tax purposes;~~. ***That*** ~~that~~ test would be met, for instance, even if no amount were actually deducted as a result of the permanent establishment being exempt from tax in the source country or of the employer simply deciding not to claim a deduction to which he was entitled. ***The test would also be met where the remuneration is not deductible merely because of its nature (e.g. where the State takes the view that the issuing of shares pursuant to an employee stock-option does not give rise to a deduction) rather than because it should not be allocated to the permanent establishment.***

Notes

1. In the United States, the acronym "ESOP" refers to employee stock-ownership plans. For the purposes of this document, however, the acronym refers exclusively to employee stock-option plans.
2. For the purpose of this note, plans that are called "share purchase plans" but which grant employees options or other rights to purchase employer's shares (such as so-called "section 423 plans" in the United States) are considered ESOPs as opposed to plans that simply permit the direct receipt or purchase of employer's shares by the employee.
3. For purposes of this note, an "in the money option" refers to an option to acquire a share at a price that is below the market value of that share at the time the option is granted. Conversely, an "out of money option" refers to an option to acquire a share at a price that is equal to or above the market value of that share.
4. The annex presents a graphic illustration of the various events in relation to an employee stock-option and the benefit accruing at those events.
5. Another benefit that derives from the exercise of the option is the dividends that the employee can subsequently receive as a shareholder.
6. A similar issue will arise with respect to an American option if there is a time gap between the moment when all the conditions attached to the option have been met (so that the right to exercise it at a later date can no longer be forfeited) and the beginning of the period during which it can be exercised.

7. This list is not exhaustive since, in some countries, taxation may also occur at other events (*e.g.* when an employee ceases to be a resident).

8. It should be noted that in a number of countries, the tax treatment of the benefits from a stock-option or the gain resulting from the sale of the shares may differ depending on how long the shares have been owned after their acquisition by the employee.

9. It is recognised, however, that, in some countries, the imposition of withholding tax obligations on the direct employer may create administrative difficulties when the option is granted by a third party and is not considered to be provided by the employer.

10. The difference between these types of conflict is explained in paragraph 32.5 of the Commentary on Articles 23 A and 23 B of the OECD Model Tax Convention.

11. Under an "American" stock-option, the right to acquire a share may be exercised during a certain period (typically a number of years) while under a "European" stock-option, that right may only be exercised at a given moment (*i.e.* on a particular date).

12. For the purposes of that formula, the only days of employment that should be taken into account are those that are relevant for the stock-option plan, *e.g.* those during which services are rendered to the same employer or to other employers the employment by whom would be taken into account to satisfy a period of employment required to irrevocably acquire the option.

13. Where stock-options vest incrementally, *e.g.* 25% per year over 4 years under the condition that the employee worked with the company throughout the relevant period, the determination of the relevant period of services needs to be done separately for each vesting period.

14. As a general rule, a State will only tax an element of income on the basis of residence if the taxpayer is a resident of that State at the time when the income is considered to be derived by the taxpayer under the domestic tax law of that State.

15. The transfer pricing issues that may arise when the costs are incurred by a company that is not the employer (*e.g.* ESOP at the level of the parent company) are not discussed in this note.

ANNEX 2

CHANGES TO THE OECD MODEL TAX CONVENTION

The following are the changes to the Commentary to the Model Tax Convention resulting from this note (changes to the existing text of the Commentary appear in ***bold italics*** for additions and ~~strikethrough~~ for deletions):

Commentary on Article 13

1. Add the following paragraph 32 to the Commentary on Article 13:

    32. There is a need to distinguish the capital gain that may be derived from the alienation of shares acquired upon the exercise of a stock-option granted to an employee or member of a board of directors from the benefit derived from the stock-option that is covered by Articles 15 or 16. The principles on which that distinction is based are discussed in paragraphs 12.2 to 12.5 of the Commentary on Article 15 and paragraph 3.1 of the Commentary on Article 16.

Commentary on Article 15

2. Replace paragraph 2.1 of the Commentary on Article 15 by the following:

    2.1 Member countries have generally understood the term "salaries, wages and other similar remuneration" to include benefits in kind received in respect of an employment (*e.g.* ***stock-options***, the use of a residence or automobile, health or life insurance coverage and club memberships).

3. Add the following paragraph 2.2 to the Commentary on Article 15:

    2.2 The condition provided by the Article for taxation by the State of source is that the salaries, wages or other similar remuneration be derived from the exercise of employment in that State. This applies regardless of when that income may be paid to, credited to or otherwise definitively acquired by the employee.

4. Replace paragraph 7 of the Commentary on Article 15 by the following:

    7. Under the third condition, if the employer has ***a permanent establishment*** in the State in which the employment is exercised~~ a permanent establishment~~, the exemption is given~~ only~~ on condition that the remuneration is not borne by ***that*** ~~a~~ permanent establishment~~ which he has in that State~~ . The phrase "borne by" must be interpreted in the light of the underlying purpose of subparagraph *c*) of the Article, which is to ensure that the exception provided for in paragraph 2 does not apply

to remuneration that ~~is deductible~~ ***could give rise to a deduction***, having regard to the principles of Article 7 ***and the nature of the remuneration***, in computing the profits of a permanent establishment situated in the State in which the employment is exercised. In this regard, it must be noted that the fact that the employer has, or has not, actually ~~deducted the~~ ***claimed a deduction for the*** remuneration in computing the profits attributable to the permanent establishment is not necessarily conclusive since the proper test is whether ***any deduction otherwise available for that remuneration would be allocated to the permanent establishment*** ~~the remuneration would be allowed as a deduction for tax purposes;~~.***That*** ~~that~~ test would be met, for instance, even if no amount were actually deducted as a result of the permanent establishment being exempt from tax in the source country or of the employer simply deciding not to claim a deduction to which he was entitled. ***The test would also be met where the remuneration is not deductible merely because of its nature (e.g. where the State takes the view that the issuing of shares pursuant to an employee stock-option does not give rise to a deduction) rather than because it should not be allocated to the permanent establishment.***

5. Add the following heading and paragraphs 12 to 12.15 to the Commentary on Article 15:

The treatment of employee stock-options

12. The different country rules for taxing employee stock-options create particular problems which are discussed below. While many of these problems arise with respect to other forms of employee remuneration, particularly those that are based on the value of shares of the employer or a related company, they are particularly acute in the case of stock-options. This is largely due to the fact that stock-options are often taxed at a time (e.g. when the option is exercised or the shares sold) that is different from the time when the employment services that are remunerated through these options are rendered.

12.1 As noted in paragraph 2.2, the Article allows the State of source to tax the part of the stock-option benefit that constitutes remuneration derived from employment exercised in that State even if the tax is levied at a later time when the employee is no longer employed in that State.

12.2 While the Article applies to the employment benefit derived from a stock-option granted to an employee regardless of when that benefit is taxed, there is a need to distinguish that employment benefit from the capital gain that may be derived from the alienation of shares acquired upon the exercise of the option. This Article, and not Article 13, will apply to any benefit derived from the option itself until it has been exercised, sold or

R (20)

otherwise alienated (e.g. upon cancellation or acquisition by the employer or issuer). Once the option is exercised or alienated, however, the employment benefit has been realized and any subsequent gain on the acquired shares (i.e. the value of the shares that accrues after exercise) will be derived by the employee in his capacity of investor-shareholder and will be covered by Article 13. Indeed, it is at the time of exercise that the option, which is what the employee obtained from his employment, disappears and the recipient obtains the status of shareholder (and usually invests money in order to do so). Where, however, the option that has been exercised entitles the employee to acquire shares that will not irrevocably vest until the end of a period of required employment, it will be appropriate to apply this Article to the increase in value, if any, until the end of the required period of employment that is subsequent to the exercise of the option.

12.3 The fact that the Article does not apply to a benefit derived after the exercise or alienation of the option does not imply in any way that taxation of the employment income under domestic law must occur at the time of that exercise or alienation. As already noted, the Article does not impose any restriction as to when the relevant income may be taxed by the State of source. Thus, the State of source could tax the relevant income at the time the option is granted, at the time the option is exercised (or alienated), at the time the share is sold or at any other time. The State of source, however, may only tax the benefits attributable to the option itself and not what is attributable to the subsequent holding of shares acquired upon the exercise of that option (except in the circumstances described in the last sentence of the preceding paragraph).

12.4 Since paragraph 1 must be interpreted to apply to any benefit derived from the option until it has been exercised, sold or otherwise alienated, it does not matter how such benefit, or any part thereof, is characterized for domestic tax purposes. As a result, whilst the Article will be interpreted to allow the State of source to tax the benefits accruing up to the time when the option has been exercised, sold or otherwise alienated, it will be left to that State to decide how to tax such benefits, e.g. as either employment income or capital gain. If the State of source decides, for example, to impose a capital gains tax on the option when the employee ceases to be a resident of that country, that tax will be allowed under the Article. The same will be true in the State of residence. For example, while that State will have sole taxation right on the increase of value of the share obtained after exercise since this will be considered to fall under Article 13 of the Convention, it may well decide to tax such increase as employment income rather than as a capital gain under its domestic law.

12.5 The benefits resulting from a stock-option granted to an employee will not, as a general rule, fall under either Article 21, which does not apply

to income covered by other Articles, or Article 18, which only applies to pension and other similar remuneration, even if the option is exercised after termination of the employment or retirement.

12.6 Paragraph 1 allows the State of source to tax salaries, wages and other similar remuneration derived from employment exercised in that State. The determination of whether and to what extent an employee stock-option is derived from employment exercised in a particular State must be done in each case on the basis of all the relevant facts and circumstances, including the contractual conditions associated with that option (e.g. the conditions under which the option granted may be exercised or disposed of). The following general principles should be followed for that purpose.

12.7 The first principle is that, as a general rule, an employee stock-option should not be considered to relate to any services rendered after the period of employment that is required as a condition for the employee to acquire the right to exercise that option. Thus, where a stock-option is granted to an employee on the condition that he provides employment services to the same employer (or an associated enterprise) for a period of three years, the employment benefit derived from that option should generally not be attributed to services performed after that three-year period.

12.8 In applying the above principle, however, it is important to distinguish between a period of employment that is required to obtain the right to exercise an employee stock-option and a period of time that is merely a delay before such option may be exercised (a blocking period). Thus, for example, an option that is granted to an employee on the condition that he remains employed by the same employer (or an associated enterprise) during a period of three years can be considered to be derived from the services performed during these three years while an option that is granted, without any condition of subsequent employment ,to an employee on a given date but which, under its terms and conditions, can only be exercised after a delay of three years, should not be considered to relate to the employment performed during these years as the benefit of such an option would accrue to its recipient even if he were to leave his employment immediately after receiving it and waited the required three years before exercising it.

12.9 It is also important to distinguish between a situation where a period of employment is required as a condition for the acquisition of the right to exercise an option, i.e. the vesting of the option, and a situation where an option that has already vested may be forfeited if it is not exercised before employment is terminated (or within a short period after). In the latter situation, the benefit of the option should not be considered to relate to services rendered after vesting since the employee has already obtained the

benefit and could in fact realise it at any time. A condition under which the vested option may be forfeited if employment is terminated is not a condition for the acquisition of the benefit but, rather, one under which the benefit already acquired may subsequently be lost. The following examples illustrate this distinction:

- ***Example 1: On 1 January of year 1, a stock-option is granted to an employee. The acquisition of the option is conditional on the employee continuing to be employed by the same employer until 1 January of year 3. The option, once this condition is met, will be exercisable from 1 January of year 3 until 1 January of year 10 (a so-called "American" option[1]). It is further provided, however, that any option not previously exercised will be lost upon cessation of employment. In that example, the right to exercise that option has been acquired on 1 January of year 3 (i.e. the date of vesting) since no further period of employment is then required for the employee to obtain the right to exercise the option.***
- ***Example 2: On 1 January of year 1, a stock-option is granted to an employee. The option is exercisable on 1 January of year 5 (a so-called "European" option). The option has been granted subject to the condition that it can only be exercised on 1 January of year 5 if employment is not terminated before that date. In that example, the right to exercise that option is not acquired until 1 January of year 5, which is the date of exercise, since employment until that date is required to acquire the right to exercise the option (i.e. for the option to vest).***

12.10 There are cases where that first principle might not apply. One such case could be where the stock-option is granted without any condition to an employee at the time he either takes up an employment, is transferred to a new country or is given significant new responsibilities and, in each case, the option clearly relates to the new functions to be performed by the employee during a specific future period. In that case, it may be appropriate to consider that the option relates to these new functions even if the right to exercise the option is acquired before these are performed. There are also cases where an option vested technically but where that option entitles the employee to acquire shares which will not vest until the end of a period of required employment. In such cases, it may be appropriate to consider that

1 Under an "American" stock-option, the right to acquire a share may be exercised during a certain period (typically a number of years) while under a "European" stock-option, that right may only be exercised at a given moment (*i.e.* on a particular date).

the benefit of the option relates to the services rendered in the whole period between the grant of the option and the vesting of the shares.

12.11 The second principle is that an employee stock-option should only be considered to relate to services rendered before the time when it is granted to the extent that such grant is intended to reward the provision of such services by the recipient for a specific period. This would be the case, for example, where the remuneration is demonstrably based on the employee's past performance during a certain period or is based on the employer's past financial results and is conditional on the employee having been employed by the employer or an associated enterprise during a certain period to which these financial results relate. Also, in some cases, there may be objective evidence demonstrating that during a period of past employment, there was a well-founded expectation among participants to an employee stock-option plan that part of their remuneration for that period would be provided through the plan by having stock-options granted at a later date. This evidence might include, for example, the consistent practice of an employer that has granted similar levels of stock-options over a number of years, as long as there was no indication that this practice might be discontinued. Depending on other factors, such evidence may be highly relevant for purposes of determining if and to what extent the stock-option relates to such a period of past employment.

12.12 Where a period of employment is required to obtain the right to exercise an employee's stock-option but such requirement is not applied in certain circumstances, e.g. where the employment is terminated by the employer or where the employee reaches retirement age, the stock-option benefit should be considered to relate only to the period of services actually performed when these circumstances have in fact occurred.

12.13 Finally, there may be situations in which some factors may suggest that an employee stock-option is rewarding past services but other factors seem to indicate that it relates to future services. In cases of doubt, it should be recognised that employee stock-options are generally provided as an incentive to future performance or as a way to retain valuable employees. Thus, employee stock-options are primarily related to future services. However, all relevant facts and circumstances will need to be taken into account before such a determination can be made and there may be cases where it can be shown that a stock-option is related to combined specific periods of previous and future services (e.g. options are granted on the basis of the employee having achieved specific performance targets for the previous year, but they become exercisable only if the employee remains employed for another three years).

12.14 Where, based on the preceding principles, a stock-option is considered to be derived from employment exercised in more than one State, it will be necessary to determine which part of the stock-option benefit is derived from employment exercised in each State for purposes of the application of the Article and of Articles 23 A and 23 B. In such a case, the employment benefit attributable to the stock-option should be considered to be derived from a particular country in proportion of the number of days during which employment has been exercised in that country to the total number of days during which the employment services from which the stock-option is derived has been exercised. For that purpose, the only days of employment that should be taken into account are those that are relevant for the stock-option plan, e.g. those during which services are rendered to the same employer or to other employers the employment by whom would be taken into account to satisfy a period of employment required to acquire the right to exercise the option.

12.15 It is possible for member countries to depart from the case-by-case application of the above principles (in paragraphs 12.7 to 12.14) by agreeing to a specific approach in a bilateral context. For example, two countries that tax predominantly at exercise of an option may agree, as a general principle, to attribute the income from an option that relates primarily to future services to the services performed by an employee in the two States between date of grant and date of exercise. Thus, in the case of options that do not become exercisable until the employee has performed services for the employer for a specific period of time, two States could agree to an approach that attributes the income from the option to each State based on the number of days worked in each State by the employee for the employer in the period between date of grant and date of exercise. Another example would be for two countries that have similar rules for the tax treatment of employee stock-options to adopt provisions that would give to one of the Contracting States exclusive taxation rights on the employment benefit even if a minor part of the employment services to which the option relates have been rendered in the other State. Of course, member countries should be careful in adopting such approaches because they may result in double taxation or double non-taxation if part of the employment is exercised in a third State that does not apply a similar approach.

Commentary on Article 16

6. Replace paragraph 1.1 of the Commentary on Article 16 by the following:

1.1 Member countries have generally understood the term 'fees and other similar payments' to include benefits in kind received by a person in that person's capacity as a member of the board of directors of a

company (*e.g.* ***stock-options***, the use of a residence or automobile, health or life insurance coverage and club memberships).

7. Add the following paragraph 3.1 to the Commentary on Article 16:

3.1 Many of the issues discussed under paragraphs 12 to 12.15 of the Commentary on Article 15 in relation to stock-options granted to employees will also arise in the case of stock-options granted to members of the board of directors of companies. To the extent that stock-options are granted to a resident of a Contracting State in that person's capacity as a member of the board of directors of a company which is a resident of the other State, that other State will have the right to tax the part of the stock-option benefit that constitutes director's fees or a similar payment (see paragraph 1.1 above) even if the tax is levied at a later time when the person is no longer a member of that board. While the Article applies to the benefit derived from a stock-option granted to a member of the board of directors regardless of when that benefit is taxed, there is a need to distinguish that benefit from the capital gain that may be derived from the alienation of shares acquired upon the exercise of the option. This Article, and not Article 13, will apply to any benefit derived from the option itself until it has been exercised, sold or otherwise alienated (e.g. upon cancellation or acquisition by the company or issuer). Once the option is exercised or alienated, however, the benefit taxable under this Article has been realized and any subsequent gain on the acquired shares (i.e. the value of the shares that accrues after exercise) will be derived by the member of the board of directors in his capacity of investor-shareholder and will be covered by Article 13. Indeed, it is at the time of exercise that the option, which is what the director obtained in his capacity as such, disappears and the recipient obtains the status of shareholder (and usually invests money in order to do so).

R (20)

Commentary on Articles 23 A and 23 B

8. Add the following paragraphs 4.1 to 4.3 to the Commentary on Articles 23 A and 23 B:

4.1 Article 4, however, only deals with cases of concurrent full liability to tax. The conflict in case a) may therefore not be solved if the same item of income is subject to the full liability to tax of two countries but at different times. The following example illustrates that problem. Assume that a resident of State R1 derives a taxable benefit from an employee stock-option that is granted to that person. State R1 taxes that benefit when the option is granted. The person subsequently becomes a resident of State R2, which taxes the benefit at the time of its subsequent exercise. In that case, the person is taxed by each State at a time when he is a resident of that State

and Article 4 does not deal with the issue as there is no concurrent residence in the two States.

4.2 The conflict in that situation will be reduced to that of case b) and solved accordingly to the extent that the employment services to which the option relates have been rendered in one of the Contracting States so as to be taxable by that State under Article 15 because it is the State where the relevant employment is exercised. Indeed, in such a case, the State in which the services have been rendered will be the State of source for purposes of elimination of double taxation by the other State. It does not matter that the first State does not levy tax at the same time (see paragraph 32.8). It also does not matter that the other State considers that it levies tax as a State of residence as opposed to a State of source (see the last sentence of paragraph 8).

4.3 Where, however, the relevant employment services have not been rendered in either State, the conflict will not be one of source-residence double taxation. The mutual agreement procedure could be used to deal with such a case. One possible basis to solve the case would be for the competent authorities of the two States to agree that each State should provide relief as regards the residence-based tax that was levied by the other State on the part of the benefit that relates to services rendered during the period while the employee was a resident of that other State. Thus, in the above example, if the relevant services were rendered in a third State before the person became a resident of State R2, it would be logical for the competent authority of State R2 to agree to provide relief (either through the credit or exemption method) for the State R1 tax that has been levied on the part of the employment benefit that relates to services rendered in the third State since, at the time when these services were rendered, the taxpayer was a resident of State R1 and not of State R2 for purposes of the convention between these two States.

9. Add the following paragraph 32.8 and the preceding heading to the Commentary on Articles 23 A and 23 B:

F. Timing Mismatch

32.8 The provisions of the Convention that allow the State of source to tax particular items of income or capital do not provide any restriction as to when such tax is to be levied (see, for instance, paragraph 2.2 of the Commentary on Article 15). Since both Articles 23 A and 23 B require that relief be granted where an item of income or capital may be taxed by the State of source in accordance with the provisions of the Convention, it follows that such relief must be provided regardless of when the tax is levied by the State of source. The State of residence must therefore provide relief of double taxation through the credit or exemption method with respect to such item of income or capital even though the State of source taxes it in an

earlier or later year. Some States, however, do not follow the wording of Article 23 A or 23 B in their bilateral conventions and link the relief of double taxation that they give under tax conventions to what is provided under their domestic laws. These countries, however, would be expected to seek other ways (the mutual agreement procedure, for example) to relieve the double taxation which might otherwise arise in cases where the State of source levies tax in a different taxation year.

Improving the Resolution of Tax Treaty Disputes

INTRODUCTION

1. On 27 July 2004, the OECD Committee on Fiscal Affairs released a progress report on its work on improving the resolution of cross-border tax disputes. The report, entitled "Improving the Process for Resolving International Tax Disputes",[1] included 31 proposals aimed at improving the way that tax treaty disputes are resolved through the mutual agreement procedure.

2. A number of these proposals were directed at tax administrations. Some of these were aimed at ensuring greater transparency through the dissemination of individual countries' information concerning the organisation of competent authority functions and the procedures to be followed in mutual agreement cases. As a result of work done on these proposals, such information is now provided through the OECD website, which includes a periodically updated list of "country profiles on mutual agreement procedure" for both OECD and non-OECD countries.[2]

3. Other proposals required additional work. The note entitled "Proposals for Improving Mechanisms for the Resolution of Tax Treaty Disputes", which was released as a public discussion draft (the "Public Discussion Draft") on 1 February 2006, provided the results of that follow-up work. It included various draft changes to the OECD Model Tax Convention, dealing primarily with the addition of an arbitration process to solve disagreements arising in the course of a mutual agreement procedure, as well as a proposal for developing an online Manual on Effective Mutual Agreement Procedure.

4. A number of written comments were received on the Public Discussion Draft. Also, a public consultation meeting, attended by over 150 participants, was held in Tokyo on 13 March 2006. As a result of these comments and meeting, a number of modifications have been made to the proposed changes to the OECD Model Tax Convention that were included in the Public Discussion Draft. These changes are reflected in this note, which was approved by the Committee on Fiscal Affairs on 30 January 2007.

5. Section A of this note includes the revised version of the proposal to add to the OECD Model Tax Convention an arbitration process to deal with unresolved issues that prevent competent authorities from reaching a mutual agreement. In a number of written comments and during the March 2006 public consultation meeting, the interaction between the proposed arbitration process and domestic legal remedies was a prominent theme. Business participants expressed concern as regards the proposal that domestic legal remedies would have to be waived in order for unresolved issues to be brought to arbitration. In response to these comments, the Committee has changed its proposal and has decided that the person who makes the arbitration request (or any person affected by the case) will not be required to waive rights to

MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

domestic remedies as a condition for requesting arbitration. The changes made to the previous version of section A are primarily intended to implement that option.

6. Section B includes a slightly revised version of the changes to the Commentary on Article 25 that address proposals included in the 2004 Progress Report that dealt with various issues that may arise in the course of a mutual agreement procedure.

7. The changes to the Model Tax Convention included in sections A and B will now be included in the next update to the Model, which will be published in 2008.

8. Section C deals with the follow-up to the other proposals of the 2004 Progress Report. It refers to the online Manual on Effective Mutual Agreement Procedure ("MEMAP") that has been developed in response to a number of proposals of the 2004 Progress Report. This manual explains the various stages of the mutual agreement procedure, discusses various issues related to that procedure and, where appropriate, describes best practices. It is available at www.oecd.org/ctp/memap and will be updated periodically to reflect new developments. Section C also includes a reporting framework for MAP cases that the Committee intends to use to collect and make public statistical information on MAP cases.

9. Annex 1 lists all the proposals included in the 2004 Progress Report and, where follow-up work was required, refers to the part of this report that describes how the proposal was subsequently dealt with. Annex 2 includes the reporting framework referred to in section C.

A. ARBITRATION OF UNRESOLVED ISSUES IN A MUTUAL AGREEMENT CASE

10. The existing mutual agreement procedure ("MAP") provides a generally effective and efficient method of resolving international tax disputes. However, there will inevitably be cases in which the MAP is not able to reach a satisfactory result. These cases will typically arise when the countries involved cannot agree in a particular situation that the taxation by both States is in accordance with the treaty. Since the MAP as currently structured does not *require* the countries to come to a common understanding of the treaty, but only that they endeavour to agree, the result can be unrelieved double taxation or "taxation not in accordance with the Convention" where the countries cannot agree.

11. The inability of the current MAP to provide for all steps possible to facilitate a final resolution of issues arising under treaties was pointed out by both private sector representatives and tax officials as one of the principal

obstacles to ensuring an effective MAP. It causes taxpayers to hesitate in making the resource commitment to enter into the MAP and likewise provides no incentive to competent authorities to take all steps necessary to ensure a speedy resolution of the issues involved.

12. The MAP can thus be improved by supplementing it with additional dispute resolution techniques which can help to resolve issues which have prevented the countries from reaching agreement in a MAP. In this way, international tax disputes will to the greatest extent possible be resolved in a final, principled, fair and objective manner for both the countries and the taxpayers concerned. Reducing the number of unresolved cross-border tax disputes in this way is clearly an important goal. Recourse to these techniques, however, must be an integral part of the mutual agreement procedure and should not constitute an alternative route to solving tax treaty disputes between States, which would risk undermining the effectiveness of the mutual agreement procedure. The techniques are aimed at ensuring that the competent authorities are able to offer to the taxpayer an agreed solution to the case which he has presented. On the other hand, where the competent authorities are able to resolve their differences as to the application of the treaty without recourse to supplementary techniques, there is no further need for applying such techniques in that case.

13. These additional techniques can make the MAP itself more effective even in cases where resort to the techniques is not necessary. The very existence of these techniques can encourage greater use of the MAP since both governments and taxpayers will know at the outset that the time and effort put into the MAP will be likely to produce a satisfactory result. Further, governments will have an incentive to ensure that the MAP is conducted efficiently in order to avoid the necessity of subsequent supplemental procedures. In addition, the introduction of supplementary dispute resolution techniques will reduce the likelihood of costly, time-consuming and possibly conflicting domestic judicial proceedings.

14. For these reasons, the 2004 Progress Report indicated that a proposal related to the mandatory resolution of unresolved MAP issues should be developed. As a result of work on that proposal, the Committee has concluded that the additional paragraph below (together with its Commentary and annex thereto) should be added to Article 25 of the OECD Model Tax Convention to provide for the arbitration of unresolved issues that prevent competent authorities from reaching an agreement on a MAP case within 2 years.

Proposed paragraph

15. The following is a revised version of the proposed new paragraph that was included in the Public Discussion Draft of 1 February 2006. The changes to the paragraph mainly reflect the decision not to require a waiver of domestic remedies as a condition for initiating the arbitration process.

Add the following new paragraph 5 *to Article* 25*:*

5. Where,

a) under paragraph 1, a person has presented a case to the competent authority of a Contracting State on the basis that the actions of one or both of the Contracting States have resulted for that person in taxation not in accordance with the provisions of this Convention, and

b) the competent authorities are unable to reach an agreement to resolve that case pursuant to paragraph 2 within two years from the presentation of the case to the competent authority of the other Contracting State,

any unresolved issues arising from the case shall be submitted to arbitration if the person so requests. These unresolved issues shall not, however, be submitted to arbitration if a decision on these issues has already been rendered by a court or administrative tribunal of either State. Unless a person directly affected by the case does not accept the mutual agreement that implements the arbitration decision, that decision shall be binding on both Contracting States and shall be implemented notwithstanding any time limits in the domestic laws of these States. The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of this paragraph.[1]

[Text of the footnote, which would appear on the same page:]

1 In some States, national law, policy or administrative considerations may not allow or justify the type of dispute resolution envisaged under this paragraph. In addition, some States may only wish to include this paragraph in treaties with certain States. For these reasons, the paragraph should only be included in the Convention where each State concludes that it would be appropriate to do so based on the factors described in paragraph 47 of the Commentary on the paragraph. As mentioned in paragraph 54 of that Commentary, however, other States may be able to agree to remove from the paragraph the condition that issues may not be submitted to arbitration if a decision on these issues has already been rendered by one of their courts or administrative tribunals.

Proposed Commentary on the new paragraph

16. The following is a revised version of the Commentary on the new paragraph (other consequential changes to the Commentary will be made when the following paragraphs are included in the Model Tax Convention).

Replace paragraphs 45 to 48 of the Commentary on Article 25 and the heading preceding them by the following new heading and paragraphs 45 to 69 (and renumber existing paragraphs 49 to 54 as paragraphs 70 to 75.

~~IV Final observations~~

~~45. On the whole, the mutual agreement procedure has proved satisfactory. Treaty practice shows that Article 25 has generally represented the maximum that Contracting States were prepared to accept. It must, however, be admitted that this provision is not yet entirely satisfactory from the taxpayer's viewpoint. This is because the competent authorities are required only to seek a solution and are not obliged to find one (*cf.* paragraph 26 above). The conclusion of a mutual agreement depends to a large extent on the powers of compromise which the domestic law allows the competent authorities. Thus, if a convention is interpreted or applied differently in two Contracting States, and if the competent authorities are unable to agree on a joint solution within the framework of a mutual agreement procedure, double taxation is still possible although contrary to the sense and purpose of a convention aimed at avoiding double taxation.~~

~~46. It is difficult to avoid this situation without going outside the framework of the mutual agreement procedure. The first approach to a solution might consist of seeking an advisory opinion: the two Contract-ing States would agree to ask the opinion of an impartial third party, although the final decision would still rest with the States.~~

~~47. The provisions embodied in this Convention, as well as the Commentary related thereto, are the result of close international joint work within the Committee on Fiscal Affairs. A possibility near at hand would be to call upon the Committee on Fiscal Affairs to give an opinion on the correct understanding of the provisions where special difficulties of interpretation arise as to particular points. Such a practice, which would be in line with the mandate and aims of the Committee on Fiscal Affairs, might well make a valuable contribution to arriving at a desirable uniformity in the application of the provisions.~~

~~48. Another solution is that of arbitration. This is the solution adopted by the member States of the European Communi-ties through their multilateral Arbitration Conven-tion, which was signed on 23 July 1990 and which provides that certain cases of double taxation~~

~~that have not been solved through the mutual agreement procedure must be submitted to an arbitration procedure. Also, some recent bilateral conventions provide that the Contract-ing States may agree to submit unresolved disagreements to arbitration.~~

Paragraph 5

45. This paragraph provides that, in the cases where the competent authorities are unable to reach an agreement under paragraph 2 within two years, the unresolved issues will, at the request of the person who presented the case, be solved through an arbitration process. This process is not dependent on a prior authorization by the competent authorities: once the requisite procedural requirements have been met, the unresolved issues that prevent the conclusion of a mutual agreement must be submitted to arbitration.

46. The arbitration process provided for by the paragraph is not an alternative or additional recourse: where the competent authorities have reached an agreement that does not leave any unresolved issues as regards the application of the Convention, there are no unresolved issues that can be brought to arbitration even if the person who made the mutual agreement request does not consider that the agreement reached by the competent authorities provides a correct solution to the case. The paragraph is, therefore, an extension of the mutual agreement procedure that serves to enhance the effectiveness of that procedure by ensuring that where the competent authorities cannot reach an agreement on one or more issues that prevent the resolution of a case, a resolution of the case will still be possible by submitting those issues to arbitration. Thus, under the paragraph, the resolution of the *case* continues to be reached through the mutual agreement procedure, whilst the resolution of a particular *issue* which is preventing agreement in the case is handled through an arbitration process. This distinguishes the process established in paragraph 5 from other forms of commercial or government-private party arbitration where the jurisdiction of the arbitral panel extends to resolving the whole case.

47. It is recognised, however, that in some States, national law, policy or administrative considerations may not allow or justify the type of arbitration process provided for in the paragraph. For example, there may be constitutional barriers preventing arbitrators from deciding tax issues. In addition, some countries may only be in a position to include this paragraph in treaties with particular States. For these reasons, the paragraph should only be included in the Convention where each State concludes that the process is capable of effective implementation.

48. In addition, some States may wish to include paragraph 5 but limit its application to a more restricted range of cases. For example, access to arbitration could be restricted to cases involving issues which are primarily factual in nature. It could also be possible to provide that arbitration would always be available for issues arising in certain classes of cases, for example, highly factual cases such as those related to transfer pricing or the question of the existence of a permanent establishment, whilst extending arbitration to other issues on a case-by-case basis.

49. States which are members of the European Union must co-ordinate the scope of paragraph 5 with their obligations under the European Arbitration Convention.

50. The taxpayer should be able to request arbitration of unresolved issues in all cases dealt with under the mutual agreement procedure that have been presented under paragraph 1 on the basis that the actions of one or both of the Contracting States have resulted for a person in taxation not in accordance with the provisions of this Convention. Where the mutual agreement procedure is not available, for example because of the existence of serious violations involving significant penalties (see paragraph 18.5), it is clear that paragraph 5 is not applicable.

51. Where two Contracting States that have not included the paragraph in their Convention wish to implement an arbitration process for general application or to deal with a specific case, it is still possible for them to do so by mutual agreement. In that case, the competent authorities can conclude a mutual agreement along the lines of the sample wording presented in the annex, to which they would add the following first paragraph:

1. Where,

   a) under paragraph 1 of Article 25 of the Convention, a person has presented a case to the competent authority of a Contracting State on the basis that the actions of one or both of the Contracting States have resulted for that person in taxation not in accordance with the provisions of this Convention, and

   b) the competent authorities are unable to reach an agreement to resolve that case pursuant to paragraph 2 of the Article within two years from the presentation of the case to the competent authority of the other Contracting State,

   any unresolved issues arising from the case shall be submitted to arbitration in accordance with the following paragraphs if the

> person so requests. These unresolved issues shall not, however, be submitted to arbitration if a decision on these issues has already been rendered by a court or administrative tribunal of either State. Unless a person directly affected by the case does not accept the mutual agreement that implements the arbitration decision, the competent authorities hereby agree to consider themselves bound by the arbitration decision and to resolve the case pursuant to paragraph 2 of Article 25 on the basis of that decision.

This agreement would go on to address the various structural and procedural issues discussed in the annex. Whilst the competent authorities would thus be bound by such process, such agreement would be given as part of the mutual agreement procedure and would therefore only be effective as long as the competent authorities continue to agree to follow that process to solve cases that they have been unable to resolve through the traditional mutual agreement procedure.

52. Paragraph 5 provides that a person who has presented a case to the competent authority of a Contracting State pursuant to paragraph 1 on the basis that the actions of one or both of the Contracting States have resulted for that person in taxation not in accordance with the provisions of this Convention may request that any unresolved issues arising from the case be submitted to arbitration. This request may be made at any time after a period of two years that begins when the case is presented to the competent authority of the other Contracting State. Recourse to arbitration is therefore not automatic; the person who presented the case may prefer to wait beyond the end of the two-year period (for example, to allow the competent authorities more time to resolve the case under paragraph 2) or simply not to pursue the case. States are free to provide that, in certain circumstances, a longer period of time will be required before the request can be made.

53. Under paragraph 2 of Article 25, the competent authorities must endeavour to resolve a case presented under paragraph 1 with a view to the avoidance of taxation not in accordance with the Convention. For the purposes of paragraph 5, a case should therefore not be considered to have been resolved as long as there is at least one issue on which the competent authorities disagree and which, according to one of the competent authorities, indicates that there has been taxation not in accordance with the Convention. One of the competent authorities could not, therefore, unilaterally decide that such a case is closed and that the person involved cannot request the arbitration of unresolved issues; similarly, the two competent authorities could not consider that the case has been resolved and deny the request for arbitration if there are still

unresolved issues that prevent them from agreeing that there has not been taxation not in accordance with the Convention. Where, however, the two competent authorities agree that taxation by both States has been in accordance with the Convention, there are no unresolved issues and the case may be considered to have been resolved, even in the case where there might be double taxation that is not addressed by the provisions of the Convention.

54. The arbitration process is only available in cases where the person considers that taxation not in accordance with the provisions of the Convention has actually resulted from the actions of one or both of the Contracting States; it is not available, however, in cases where it is argued that such taxation will eventually result from such actions even if the latter cases may be presented to the competent authorities under paragraph 1 of the Article (see paragraph 52 above). For that purpose, taxation should be considered to have resulted from the actions of one or both of the Contracting States as soon as, for example, tax has been paid, assessed or otherwise determined or even in cases where the taxpayer is officially notified by the tax authorities that they intend to tax him on a certain element of income.

55. As drafted, paragraph 5 only provides for arbitration of unresolved issues arising from a request made under paragraph 1 of the Article. States wishing to extend the scope of the paragraph to also cover mutual agreement cases arising under paragraph 3 of the Article are free to do so. In some cases, a mutual agreement case may arise from other specific treaty provisions, such as subparagraph 2 *d*) of Article 4. Under that subparagraph, the competent authorities are, in certain cases, required to settle by mutual agreement the question of the status of an individual who is a resident of both Contracting States. As indicated in paragraph 20 of the Commentary on Article 4, such cases must be resolved according to the procedure established in Article 25. If the competent authorities fail to reach an agreement on such a case and this results in taxation not in accordance with the Convention (according to which the individual should be a resident of only one State for purposes of the Convention), the taxpayer's case comes under paragraph 1 of Article 25 and, therefore, paragraph 5 is applicable.

56. In some States, it may be possible for the competent authorities to deviate from a court decision on a particular issue arising from the case presented to the competent authorities. Those States should therefore be able to omit the second sentence of the paragraph.

57. The presentation of the case to the competent authority of the other State, which is the beginning of the two-year period referred to in

the paragraph, may be made by the person who presented the case to the competent authority of the first State under paragraph 1 of Article 25 (*e.g.* by presenting the case to the competent authority of the other State at the same time or at a later time) or by the competent authority of the first State, who would contact the competent authority of the other State pursuant to paragraph 2 if it is not itself able to arrive at a satisfactory solution of the case. For the purpose of determining the start of the two-year period, a case will only be considered to have been presented to the competent authority of the other State if sufficient information has been presented to that competent authority to allow it to decide whether the objection underlying the case appears to be justified. The mutual agreement providing for the mode of application of paragraph 5 (see the annex) should specify which type of information will normally be sufficient for that purpose.

58. The paragraph also deals with the relationship between the arbitration process and rights to domestic remedies. For the arbitration process to be effective and to avoid the risk of conflicting decisions, a person should not be allowed to pursue the arbitration process if the issues submitted to arbitration have already been resolved through the domestic litigation process of either State (which means that any court or administrative tribunal of one of the Contracting States has already rendered a decision that deals with these issues and that applies to that person). This is consistent with the approach adopted by most countries as regards the mutual agreement procedure and according to which:

a) A person cannot pursue simultaneously the mutual agreement procedure and domestic legal remedies. Where domestic legal remedies are still available, the competent authorities will generally either require that the taxpayer agree to the suspension of these remedies or, if the taxpayer does not agree, will delay the mutual agreement procedure until these remedies are exhausted.

b) Where the mutual agreement procedure is first pursued and a mutual agreement has been reached, the taxpayer and other persons directly affected by the case are offered the possibility to reject the agreement and pursue the domestic remedies that had been suspended; conversely, if these persons prefer to have the agreement apply, they will have to renounce the exercise of domestic legal remedies as regards the issues covered by the agreement.

c) Where the domestic legal remedies are first pursued and are exhausted in a State, a person may only pursue the mutual agreement procedure in order to obtain relief of double taxation in

the other State. Indeed, once a legal decision has been rendered in a particular case, most countries consider that it is impossible to override that decision through the mutual agreement procedure and would therefore restrict the subsequent application of the mutual agreement procedure to trying to obtain relief in the other State.

The same general principles should be applicable in the case of a mutual agreement procedure that would involve one or more issues submitted to arbitration. It would not be helpful to submit an issue to arbitration if it is known in advance that one of the countries is limited in the response that it could make to the arbitral decision. This, however, would not be the case if the country could, in a mutual agreement procedure, deviate from a court decision (see paragraph 56) and in that case paragraph 5 could be adjusted accordingly.

59. A second issue involves the relationship between existing domestic legal remedies and arbitration where the taxpayer has not undertaken (or has not exhausted) these legal remedies. In that case, the approach that would be the most consistent with the basic structure of the mutual agreement procedure would be to apply the same general principles when arbitration is involved. Thus, the legal remedies would be suspended pending the outcome of the mutual agreement procedure involving the arbitration of the issues that the competent authorities are unable to resolve and a tentative mutual agreement would be reached on the basis of that decision. As in other mutual agreement procedure cases, that agreement would then be presented to the taxpayer who would have to choose to accept the agreement, which would require abandoning any remaining domestic legal remedies, or reject the agreement to pursue these remedies.

60. This approach is in line with the nature of the arbitration process set out in paragraph 5. The purpose of that process is to allow the competent authorities to reach a conclusion on the unresolved issues that prevent an agreement from being reached. When that agreement is achieved through the aid of arbitration, the essential character of the mutual agreement remains the same.

61. In some cases, this approach will mean that the parties will have to expend time and resources in an arbitration process that will lead to a mutual agreement that will not be accepted by the taxpayer. As a practical matter, however, experience shows that there are very few cases where the taxpayer rejects a mutual agreement to resort to domestic legal remedies. Also, in these rare cases, one would expect the domestic courts or administrative tribunals to take note of the fact that

the taxpayer had been offered an administrative solution to his case that would have bound both States.

62. In some States, unresolved issues between competent authorities may only be submitted to arbitration if domestic legal remedies are no longer available. In order to implement an arbitration approach, these States could consider the alternative approach of requiring a person to waive the right to pursue domestic legal remedies before arbitration can take place. This could be done by replacing the second sentence of the paragraph by "these unresolved issues shall not, however, be submitted to arbitration if any person directly affected by the case is still entitled, under the domestic law of either State, to have courts or administrative tribunals of that State decide these issues or if a decision on these issues has already been rendered by such a court or administrative tribunal." To avoid a situation where a taxpayer would be required to waive domestic legal remedies without any assurance as to the outcome of the case, it would then be important to also modify the paragraph to include a mechanism that would guarantee, for example, that double taxation would in fact be relieved. Also, since the taxpayer would then renounce the right to be heard by domestic courts, the paragraph should also be modified to ensure that sufficient legal safeguards are granted to the taxpayer as regards his participation in the arbitration process to meet the requirements that may exist under domestic law for such a renunciation to be acceptable under the applicable legal system (*e.g.* in some countries, such renunciation might not be effective if the person were not guaranteed the right to be heard orally during the arbitration).

63. Paragraph 5 provides that, unless a person directly affected by the case does not accept the mutual agreement that implements the arbitration decision, that decision shall be binding on both States. Thus, the taxation of any person directly affected by the case will have to conform with the decision reached on the issues submitted to arbitration and the decisions reached in the arbitral process will be reflected in the mutual agreement that will be presented to these persons.

64. As noted in subparagraph 58 b) above, where a mutual agreement is reached before domestic legal remedies have been exhausted, it is normal for the competent authorities to require, as a condition for the application of the agreement, that the persons affected renounce the exercise of domestic legal remedies that may still exist as regards the issues covered by the agreement. Without such renunciation, a subsequent court decision could indeed prevent the competent authorities from applying the agreement. Thus, for the purpose of paragraph 5, if a person to whom the mutual agreement that

implements the arbitration decision has been presented does not agree to renounce the exercise of domestic legal remedies, that person must be considered not to have accepted that agreement.

65. The arbitration decision is only binding with respect to the specific issues submitted to arbitration. Whilst nothing would prevent the competent authorities from solving other similar cases (including cases involving the same persons but different taxable periods) on the basis of the decision, there is no obligation to do so and each State therefore has the right to adopt a different approach to deal with these other cases.

66. Some States may wish to allow the competent authorities to depart from the arbitration decision, provided that they can agree on a different solution (this, for example, is allowed under Article 12 of the EU Arbitration Convention). States wishing to do so are free to amend the third sentence of the paragraph as follows:

> […] Unless a person directly affected by the case does not accept the mutual agreement that implements the arbitration decision or the competent authorities and the persons directly affected by the case agree on a different solution within six months after the decision has been communicated to them, the arbitration decision shall be binding on both States and shall be implemented notwithstanding any time limits in the domestic laws of these States.

67. The last sentence of the paragraph leaves the mode of application of the arbitration process to be settled by mutual agreement. Some aspects could also be covered in the Article itself, a protocol or through an exchange of diplomatic notes. Whatever form the agreement takes, it should set out the structural and procedural rules to be followed in applying the paragraph, taking into account the paragraph's requirement that the arbitration decision be binding on both States. Ideally, that agreement should be drafted at the same time as the Convention so as to be signed, and to apply, immediately after the paragraph becomes effective. Also, since the agreement will provide the details of the process to be followed to bring unresolved issues to arbitration, it would be important that this agreement be made public. A sample form of such agreement is provided in the annex together with comments on the procedural rules that it puts forward.

Use of other supplementary dispute resolution mechanisms

68. Regardless of whether or not paragraph 5 is included in a Convention or an arbitration process is otherwise implemented using the procedure described in paragraph 51 above, it is clear that supplementary dispute resolution mechanisms other than arbitration

can be implemented on an *ad hoc* basis as part of the mutual agreement procedure. Where there is disagreement about the relative merits of the positions of the two competent authorities, the case may be helped if the issues are clarified by a mediator. In such situations the mediator listens to the positions of each party and then communicates a view of the strengths and weaknesses of each side. This helps each party to better understand its own position and that of the other party. Some tax administrations are now successfully using mediation to resolve internal disputes and the extension of such techniques to mutual agreement procedures could be useful.

69. If the issue is a purely factual one, the case could be referred to an expert whose mandate would simply be to make the required factual determinations. This is often done in judicial procedures where factual matters are referred to an independent party who makes factual findings which are then submitted to the court. Unlike the dispute resolution mechanism which is established in paragraph 5, these procedures are not binding on the parties but nonetheless can be helpful in allowing them to reach a decision before an issue would have to be submitted to arbitration under that paragraph.

Add the following Annex to the Commentary:

ANNEX
SAMPLE MUTUAL AGREEMENT ON ARBITRATION

1. The following is a sample form of agreement that the competent authorities may use as a basis for a mutual agreement to implement the arbitration process provided for in paragraph 5 of the Article (see paragraph 67 above). Paragraphs 2 to 43 below discuss the various provisions of the agreement and, in some cases, put forward alternatives. Competent authorities are of course free to modify, add or delete any provisions of this sample agreement when concluding their bilateral agreement.

Mutual agreement on the implementation of paragraph 5 of Article 25

The competent authorities of [State A] and [State B] have entered into the following mutual agreement to establish the mode of application of the arbitration process provided for in paragraph 5 of Article 25 of the [title of the Convention], which entered into force on [date of entry into force]. The competent authorities may modify or supplement this agreement by an exchange of letters between them.

1. *Request for submission of case to arbitration.*

   A request that unresolved issues arising from a mutual agreement case be submitted to arbitration pursuant to paragraph 5 of Article 25 of the Convention (the "request for arbitration") shall be made in writing and sent to one of the competent authorities. The request shall contain sufficient information to identify the case. The request shall also be by a written statement by each of the persons accompaniedwho either made the request or is directly affected by the case that no decision on the same issues has already been rendered by a court or administrative tribunal of the States. Within 10 days of the receipt of the request, the competent authority who received it shall send a copy of the request and the accompanying statements to the other competent authority.

2. *Time for submission of the case to arbitration.*

   A request for arbitration may only be made after two years from the date on which a case presented to the competent authority of one Contracting State under paragraph 1 of Article 25 has also been presented to the competent authority of the other State. For this purpose, a case shall be considered to have been presented to the competent authority of the other State only if the following information has been presented: [the necessary information and documents will be specified in the agreement].

3. *Terms of Reference.*

   Within three months after the request for arbitration has been received by both competent authorities, the competent authorities shall agree on the questions to be resolved by the arbitration panel and communicate them in writing to the person who made the request for arbitration. This will constitute the "Terms of Reference" for the case. Notwithstanding the following paragraphs of this agreement, the competent authorities may also, in the Terms of Reference, provide procedural rules that are additional to, or different from, those included in these paragraphs and deal with such other matters as are deemed appropriate.

4. *Failure to communicate the Terms of Reference.*

   If the Terms of Reference have not been communicated to the person who made the request for arbitration within the period referred to in paragraph 3 above, that person and each competent authority may, within one month after the end of

that period, communicate in writing to each other a list of issues to be resolved by the arbitration. All the lists so communicated during that period shall constitute the tentative Terms of Reference. Within one month after all the arbitrators have been appointed as provided in paragraph 5 below, the arbitrators shall communicate to the competent authorities and the person who made the request for arbitration a revised version of the tentative Terms of Reference based on the lists so communicated. Within one month after the revised version has been received by both of them, the competent authorities will have the possibility to agree on different Terms of Reference and to communicate them in writing to the arbitrators and the person who made the request for arbitration. If they do so within that period, these different Terms of Reference shall constitute the Terms of Reference for the case. If no different Terms of Reference have been agreed to between the competent authorities and communicated in writing within that period, the revised version of the tentative Terms of Reference prepared by the arbitrators shall constitute the Terms of Reference for the case.

5. *Selection of arbitrators.*

Within three months after the Terms of Reference have been received by the person who made the request for arbitration or, where paragraph 4 applies, within four months after the request for arbitration has been received by both competent authorities, the competent authorities shall each appoint one arbitrator. Within two months of the latter appointment, the arbitrators so appointed will appoint a third arbitrator who will function as Chair. If any appointment is not made within the required time period, the arbitrator(s) not yet appointed shall be appointed by the Director of the OECD Centre for Tax Policy and Administration within 10 days of receiving a request to that effect from the person who made the request for arbitration. The same procedure shall apply with the necessary adaptations if for any reason it is necessary to replace an arbitrator after the arbitral process has begun. Unless the Terms of Reference provide otherwise, the remuneration of all arbitrators …. *[the mode of remuneration should be described here; one possibility would be to refer to the method used in the Code of Conduct on the EC Arbitration Convention]*

6. *Streamlined arbitration process.*

If the competent authorities so indicate in the Terms of Reference (provided that these have not been agreed to after the selection of arbitrators pursuant to paragraph 4 above), the following rules shall apply to a particular case notwithstanding paragraphs 5, 11, 15, 16 and 17 of this agreement:

a) Within one month after the Terms of Reference have been received by the person who made the request for arbitration, the two competent authorities shall, by common consent, appoint one arbitrator. If, at the end of that period, the arbitrator has not yet been appointed, the arbitrator will be appointed by the Director of the OECD Centre for Tax Policy and Administration within 10 days of receiving a request to that effect from the person who made the request referred to in paragraph 1. The remuneration of the arbitrator shall be determined as follows … [*the mode of remuneration should be described here; one possibility would be to refer to the method used in the Code of Conduct on the EC Arbitration Convention*]

b) Within two months from the appointment of the arbitrator, each competent authority will present in writing to the arbitrator its own reply to the questions contained in the Terms of Reference.

c) Within one month from having received the last of the replies from the competent authorities, the arbitrator will decide each question included in the Terms of Reference in accordance with one of the two replies received from the competent authorities as regards that question and will notify the competent authorities of the choice, together with short reasons explaining that choice. Such decision will be implemented as provided in paragraph 19.

7. *Eligibility and appointment of arbitrators.*

Any person, including a government official of a Contracting State, may be appointed as an arbitrator, unless that person has been involved in prior stages of the case that results in the arbitration process. An arbitrator will be considered to have been appointed when a letter confirming that appointment has been signed both by the person or persons who have the power to appoint that arbitrator and by the arbitrator himself.

8. *Communication of information and confidentiality.*

For the sole purposes of the application of the provisions of Articles 25 and 26, and of the domestic laws of the Contracting States, concerning the communication and the confidentiality of the information related to the case that results in the arbitration process, each arbitrator shall be designated as authorised representative of the competent authority that has appointed that arbitrator or, if that arbitrator has not been appointed exclusively by one competent authority, of the competent authority of the Contracting State to which the case giving rise to the arbitration was initially presented. For the purposes of this agreement, where a case giving rise to arbitration was initially presented simultaneously to both competent authorities, "the competent authority of the Contracting State to which the case giving rise to the arbitration was initially presented" means the competent authority referred to in paragraph 1 of Article 25.

9. *Failure to provide information in a timely manner.*

Notwithstanding paragraphs 5 and 6, where both competent authorities agree that the failure to resolve an issue within the two-year period provided in paragraph 5 of Article 25 is mainly attributable to the failure of a person directly affected by the case to provide relevant information in a timely manner, the competent authorities may postpone the nomination of the arbitrator for a period of time corresponding to the delay in providing that information.

10. *Procedural and evidentiary rules.*

Subject to this agreement and the Terms of Reference, the arbitrators shall adopt those procedural and evidentiary rules that they deem necessary to answer the questions set out in the Terms of Reference. They will have access to all information necessary to decide the issues submitted to arbitration, including confidential information. Unless the competent authorities agree otherwise, any information that was not available to both competent authorities before the request for arbitration was received by both of them shall not be taken into account for purposes of the decision.

11. *Participation of the person who requested the arbitration.*

The person who made the request for arbitration may, either directly or through his representatives, present his position to the arbitrators in writing to the same extent that he can do so

during the mutual agreement procedure. In addition, with the permission of the arbitrators, the person may present his position orally during the arbitration proceedings.

12. *Logistical arrangements.*

Unless agreed otherwise by the competent authorities, the competent authority to which the case giving rise to the arbitration was initially presented will be responsible for the logistical arrangements for the meetings of the arbitral panel and will provide the administrative personnel necessary for the conduct of the arbitration process. The administrative personnel so provided will report only to the Chair of the arbitration panel concerning any matter related to that process.

13. *Costs.*

Unless agreed otherwise by the competent authorities:

a) each competent authority and the person who requested the arbitration will bear the costs related to his own participation in the arbitration proceedings (including travel costs and costs related to the preparation and presentation of his views);

b) each competent authority will bear the remuneration of the arbitrator appointed exclusively by that competent authority, or appointed by the Director of the OECD Centre for Tax Policy and Administration because of the failure of that competent authority to appoint that arbitrator, together with that arbitrator's travel, telecommunication and secretariat costs;

c) the remuneration of the other arbitrators and their travel, telecommunication and secretariat costs will be borne equally by the two Contracting States;

d) costs related to the meetings of the arbitral panel and to the administrative personnel necessary for the conduct of the arbitration process will be borne by the competent authority to which the case giving rise to the arbitration was initially presented, or if presented in both States, will be shared equally; and

e) all other costs (including costs of translation and of recording the proceedings) related to expenses that both competent authorities have agreed to incur, will be borne equally by the two Contracting States.

14. *Applicable Legal Principles.*

The arbitrators shall decide the issues submitted to arbitration in accordance with the applicable provisions of the treaty and, subject to these provisions, of those of the domestic laws of the Contracting States. Issues of treaty interpretation will be decided by the arbitrators in light of the principles of interpretation incorporated in Articles 31 to 34 of the Vienna Convention on the Law of Treaties, having regard to the Commentaries of the OECD Model Tax Convention as periodically amended, as explained in paragraphs 28 to 36.1 of the Introduction to the OECD Model Tax Convention. Issues related to the application of the arm's length principle should similarly be decided having regard to the OECD Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations. The arbitrators will also consider any other sources which the competent authorities may expressly identify in the Terms of Reference.

15. *Arbitration decision.*

Where more than one arbitrator has been appointed, the arbitration decision will be determined by a simple majority of the arbitrators. Unless otherwise provided in the Terms of Reference, the decision of the arbitral panel will be presented in writing and shall indicate the sources of law relied upon and the reasoning which led to its result. With the permission of the person who made the request for arbitration and both competent authorities, the decision of the arbitral panel will be made public in redacted form without mentioning the names of the parties involved or any details that might disclose their identity and with the understanding that the decision has no formal precedential value.

16. *Time allowed for communicating the arbitration decision.*

The arbitration decision must be communicated to the competent authorities and the person who made the request for arbitration within six months from the date on which the Chair notifies in writing the competent authorities and the person who made the request for arbitration that he has received all the information necessary to begin consideration of the case. Notwithstanding the first part of this paragraph, if at any time within two months from the date on which the last arbitrator was appointed, the Chair, with the consent of one of the competent authorities, notifies in writing the other

competent authority and the person who made the request for arbitration that he has not received all the information necessary to begin consideration of the case, then

a) if the Chair receives the necessary information within two months after the date on which that notice was sent, the arbitration decision must be communicated to the competent authorities and the person who made the request for arbitration within six months from the date on which the information was received by the Chair, and

b) if the Chair has not received the necessary information within two months after the date on which that notice was sent, the arbitration decision must, unless the competent authorities agree otherwise, be reached without taking into account that information even if the Chair receives it later and the decision must be communicated to the competent authorities and the person who made the request for arbitration within eight months from the date on which the notice was sent.

17. *Failure to communicate the decision within the required period.*

In the event that the decision has not been communicated to the competent authorities within the period provided for in paragraphs 6 c) or 16, the competent authorities may agree to extend that period for a period not exceeding six months or, if they fail to do so within one month from the end of the period provided for in paragraphs 6 c) or 16, they shall appoint a new arbitrator or arbitrators in accordance with paragraph 5 or 6 a), as the case may be.

18. *Final decision.*

The arbitration decision shall be final, unless that decision is found to be unenforceable by the courts of one of the Contracting States because of a violation of paragraph 5 of Article 25 or of any procedural rule included in the Terms of Reference or in this agreement that may reasonably have affected the decision. If a decision is found to be unenforceable for one of these reasons, the request for arbitration shall be considered not to have been made and the arbitration process shall be considered not to have taken place (except for the purposes of paragraphs 8 “Communication of information and confidentiality” and 13 “Costs”).

19. *Implementing the arbitration decision.*

The competent authorities will implement the arbitration decision within six months from the communication of the decision to them by reaching a mutual agreement on the case that led to the arbitration.

20. *Where no arbitration decision will be provided.*

Notwithstanding paragraphs 6, 15, 16 and 17, where, at any time after a request for arbitration has been made and before the arbitrators have delivered a decision to the competent authorities and the person who made the request for arbitration, the competent authorities notify in writing the arbitrators and that person that they have solved all the unresolved issues described in the Terms of Reference, the case shall be considered as solved under the mutual agreement procedure and no arbitration decision shall be provided.

This agreement applies to any request for arbitration made pursuant to paragraph 5 of Article 25 of the Convention after that provision has become effective.

[Date of signature of the agreement]

[Signature of the competent authority of each Contracting State]

General approach of the sample agreement

2. A number of approaches can be taken to structuring the arbitral process which is used to supplement the mutual agreement procedure. Under one approach, which might be referred to as the "independent opinion" approach, the arbitrators would be presented with the facts and arguments by the parties based on the applicable law, and would then reach their own independent decision which would be based on a written, reasoned analysis of the facts involved and applicable legal sources.

3. Alternatively, under the so-called "last best offer" or "final offer" approach, each competent authority would be required to give to the arbitral panel a proposed resolution of the issue involved and the arbitral panel would choose between the two proposals which were presented to it. There are obviously a number of variations between these two positions. For example, the arbitrators could reach an independent decision but would not be required to submit a written decision but simply their conclusions. To some extent, the appropriate method depends on the type of issue to be decided.

4. The above sample agreement takes as its starting point the "independent opinion" approach which is thus the generally applicable process but, in recognition of the fact that many cases, especially those which involve primarily factual questions, may be best handled differently, it also provides for an alternative "streamlined" process, based on the "last best offer" or "final offer" approach. Competent authorities can therefore agree to use that streamlined process on a case-by-case basis. Competent authorities may of course adopt this combined approach, adopt the streamlined process as the generally applicable process with the independent opinion as an option in some circumstances or limit themselves to only one of the two approaches.

The request for arbitration

5. Paragraph 1 of the sample agreement provides the manner in which a request for arbitration should be made. Such request should be presented in writing to one of the competent authorities involved in the case. That competent authority should then inform the other competent authority within 10 days of the receipt of the request.

6. In order to determine that the conditions of paragraph 5 of Article 25 have been met (see paragraph 56 of the Commentary on this Article) the request should be accompanied by statements indicating that no decision on these issues has already been rendered by domestic courts or administrative tribunals in either Contracting State.

7. Since the arbitration process is an extension of the mutual agreement procedure that is intended to deal with cases that cannot be solved under that procedure, it would seem inappropriate to ask the person who makes the request to pay in order to make such request or to reimburse the expenses incurred by the competent authorities in the course of the arbitration proceedings. Unlike taxpayers' requests for rulings or other types of advance agreements, where a charge is sometimes made, providing a solution to disputes between the Contracting States is the responsibility of these States for which they in general should bear the costs.

8. A request for arbitration may not be made before two years from the date when a mutual agreement case presented to the competent authority of a Contracting State has also been presented to the competent authority of the other Contracting State. Paragraph 2 of the sample agreement provides that for this purpose, a case shall only be considered to have been presented to the competent authority of that other State if the information specified in that paragraph has been so provided. The paragraph should therefore include a list of the information required; in general, that information will correspond to the

information and documents that were required to initiate the mutual agreement procedure.

Terms of Reference

9. Paragraph 3 of the sample agreement refers to the "Terms of Reference", which is the document that sets forth the questions to be resolved by the arbitrators. It establishes the jurisdictional basis for the issues which are to be decided by the arbitral panel. It is to be established by the competent authorities who may wish in that connection to consult with the person who made the request for arbitration. If the competent authorities cannot agree on the Terms of Reference within the period provided for in paragraph 3, some mechanism is necessary to ensure that the procedure goes forward. Paragraph 4 provides for that eventuality.

10. Whilst the Terms of Reference will generally be limited to a particular issue or set of issues, it would be possible for the competent authorities, given the nature of the case and the interrelated nature of the issues, to draft the Terms of Reference so that the whole case (and not only certain specific issues) be submitted to arbitration.

11. The procedural rules provided for in the sample agreement shall apply unless the competent authorities provide otherwise in the Terms of Reference. It is therefore possible for the competent authorities, through the Terms of Reference, to depart from any of these rules or to provide for additional rules in a particular case.

Streamlined process

12. The normal process provided for by the sample agreement allows the consideration of questions of either law or fact, as well as of mixed questions of law and fact. Generally, it is important that the arbitrators support their decision with the reasoning leading to it. Showing the method through which the decision was reached may be important in assuring acceptance of the decision.

13. In some cases, however, the unresolved issues will be primarily factual and the decision may be simply a statement of the final disposition, for example a determination of the amount of adjustments to the income and deductions of the respective related parties. Such circumstances will often arise in transfer pricing cases, where the unresolved issue may be simply the determination of an arm's length transfer price or range of prices (although there are other transfer pricing cases that involve complex factual issues); there are also cases in which an analogous principle may apply, for example, the determination of the existence of a permanent establishment. In some cases, the decision may be a statement of the factual premises on which the appropriate

legal principles should then be applied by the competent authorities. Paragraph 5 of the sample agreement provides a streamlined process which the competent authorities may wish to apply in these types of cases. That process, which will then override other procedural rules of the sample agreement, takes the form of the so-called “last best offer” or “final offer” arbitration, under which each competent authority is required to give to an arbitrator appointed by common consent that competent authority’s own reply to the questions included in the Terms of Reference and the arbitrator simply chooses one of the submitted replies. The competent authorities may, as for most procedural rules, amend or supplement the streamlined process through the Terms of Reference applicable to a particular case.

Selection of arbitrators

14. Paragraph 5 of the sample agreement describes how arbitrators will be selected unless the Terms of Reference drafted for a particular case provide otherwise (for instance, by opting for the streamlined process described in the preceding paragraph or by providing for more than one arbitrator to be appointed by each competent authority). Normally, the two competent authorities will each appoint one arbitrator. These appointments must be made within three months after the Terms of Reference have been received by the person who made the request for arbitration (a different deadline is provided for cases where the competent authorities do not agree on the Terms of Reference within the required period). The arbitrators thus appointed will select a Chair who must be appointed within two months of the time at which the last of the initial appointments was made. If the competent authorities do not appoint an arbitrator during the required period, or if the arbitrators so appointed do not appoint the third arbitrator within the required period, the paragraph provides that the appointment will be made by the Director of the OECD Centre for Tax Policy and Administration. The competent authorities may, of course, provide for other ways to address these rare situations but it seems important to provide for an independent appointing authority to solve any deadlock in the selection of the arbitrators.

15. There is no need for the agreement to stipulate any particular qualifications for an arbitrator as it will be in the interests of the competent authorities to have qualified and suitable persons act as arbitrators and in the interests of the arbitrators to have a qualified Chair. However, it might be possible to develop a list of qualified persons to facilitate the appointment process and this function could be developed by the Committee on Fiscal Affairs. It is important that the Chair of the panel have experience with the types of procedural,

evidentiary and logistical issues which are likely to arise in the course of the arbitral proceedings as well as having familiarity with tax issues. There may be advantages in having representatives of each Contracting State appointed as arbitrators as they would be familiar with this type of issue. Thus it should be possible to appoint to the panel governmental officials who have not been directly involved in the case. Once an arbitrator has been appointed, it should be clear that his role is to decide the case on a neutral and objective basis; he is no longer functioning as an advocate for the country that appointed him.

16. Paragraph 9 of the sample agreement provides that the appointment of the arbitrators may be postponed where both competent authorities agree that the failure to reach a mutual agreement within the two-year period is mainly attributable to the lack of cooperation by a person directly affected by the case. In that case, the approach taken by the sample agreement is to allow the competent authorities to postpone the appointment of the arbitrators by a period of time corresponding to the undue delay in providing them with the relevant information. If that information has not yet been provided when the request for arbitration is submitted, the period of time corresponding to the delay in providing the information continues to run until such information is finally provided. Where, however, the competent authorities are not provided with the information necessary to solve a particular case, there is nothing that prevents them from resolving the case on the basis of the limited information that is at their disposal, thereby preventing any access to arbitration. Also, it would be possible to provide in the agreement that if within an additional period (*e.g.* one year), the taxpayer still had not provided the necessary information for the competent authorities to properly evaluate the issue, the issue would no longer be required to be submitted to arbitration.

Communication of information and confidentiality

17. It is important that arbitrators be allowed full access to the information needed to resolve the issues submitted to arbitration but, at the same time, be subjected to the same strict confidentiality requirements as regards that information as apply to the competent authorities themselves. The proposed approach to ensure that result, which is incorporated in paragraph 8 of the sample agreement, is to make the arbitrators authorised representatives of the competent authorities. This, however, will only be for the purposes of the application of the relevant provisions of the Convention (*i.e.* Articles 25 and 26) and of the provisions of the domestic laws of the Contracting States, which would normally include the sanctions applicable in case of a breach of confidentiality. The designation of the arbitrator as

authorised representative of a competent authority would typically be confirmed in the letter of appointment but may need to be done differently if domestic law requires otherwise or if the arbitrator is not appointed by a competent authority.

Procedural and evidentiary rules

18. The simplest way to establish the evidentiary and other procedural rules that will govern the arbitration process and that have not already been provided in the agreement or the Terms of Reference is to leave it to the arbitrators to develop these rules on an *ad hoc* basis. In doing so, the arbitrators are free to refer to existing arbitration procedures, such as the International Chamber of Commerce Rules which deal with many of these questions. It should be made clear in the procedural rules that as general matter, the factual material on which the arbitral panel will base its decision will be that developed in the mutual agreement procedure. Only in special situations would the panel be allowed to investigate factual issues which had not been developed in the earlier stages of the case.

19. Paragraph 10 of the sample agreement follows that approach. Thus, decisions as regards the dates and format of arbitration meetings will be made by the arbitrators unless the agreement or Terms of Reference provide otherwise. Also, whilst the arbitrators will have access to all information necessary to decide the issues submitted to arbitration, including confidential information, any information that was not available to both competent authorities shall not be taken into account by the arbitrators unless the competent authorities agree otherwise.

Taxpayer participation in the supplementary dispute resolution process

20. Paragraph 11 of the sample agreement provides that the person requesting arbitration, either directly or through his representatives, is entitled to present a written submission to the arbitrators and, if the arbitrators agree, to make an oral presentation during a meeting of the arbitrators.

Practical arrangements

21. A number of practical arrangements will need to be made in connection with the actual functioning of the arbitral process. They include the location of the meetings, the language of the proceedings and possible translation facilities, the keeping of a record, dealing with practical details such as filing etc.

22. As regards the location and the logistical arrangements for the arbitral meetings, the easiest solution is to leave the matter to be dealt with by the competent authority to which the case giving rise to the arbitration was initially presented. That competent authority should also provide the administrative personnel necessary for the conduct of the arbitration process. This is the approach put forward in paragraph 12 of the sample agreement. It is expected that, for these purposes, the competent authority will use meeting facilities and personnel that it already has at its disposal. The two competent authorities are, however, entitled to agree otherwise (*e.g.* to take advantage of another meeting in a different location that would be attended by both competent authorities and the arbitrators).

23. It is provided that the administrative personnel provided for the conduct of the arbitration process will report only to the Chair of the arbitration panel concerning any matter related to that procedure.

24. The language of the proceedings and whether, and which, translation facilities should be provided is a matter that should normally be dealt with in the Terms of Reference. It may be, however, that a need for translation or recording will only arise after the beginning of the proceedings. In that case, the competent authorities are entitled to reach agreement for that purpose. In the absence of such agreement, the arbitrators could, at the request of one competent authority and pursuant to paragraph 10 of the sample agreement, decide to provide such translation or recording; in that case, however, the costs thereof would have to be borne by the requesting party (see under "Costs" below).

25. Other practical details (*e.g.* notice and filing of documents) should be similarly dealt with. Thus, any such matter should be decided by agreement between the competent authorities (ideally, included in the Terms of Reference) and, failing such agreement, by decision of the arbitrators.

Costs

26. Different costs may arise in relation to the arbitration process and it should be clear who should bear these costs. Paragraph 13 of the sample agreement, which deals with this issue, is based on the principle that where a competent authority or a person involved in the case can control the amount of a particular cost, this cost should be borne by that party and that other costs should be borne equally by the two competent authorities.

27. Thus, it seems logical to provide that each competent authority, as well as the person who requested the arbitration, should pay for its

own participation in the arbitration proceedings. This would include costs of being represented at the meetings and of preparing and presenting a position and arguments, whether in writing or orally.

28. The fees to be paid to the arbitrators are likely to be one of the major costs of the arbitration process. Each competent authority will bear the remuneration of the arbitrator appointed exclusively by that competent authority (or appointed by the Director of the OECD Centre for Tax Policy and Administration because of the failure of that competent authority to appoint that arbitrator), together with that arbitrator's travel, telecommunication and secretariat costs.

29. The fees and the travel, telecommunication and secretariat costs of the other arbitrators will, however, be shared equally by the competent authorities. The competent authorities will normally agree to incur these costs at the time that the arbitrators are appointed and this would typically be confirmed in the letter of appointment. The fees should be large enough to ensure that appropriately qualified experts could be recruited. One possibility would be to use a fee structure similar to that established under the EU Arbitration Convention Code of Conduct.

30. The costs related to the meetings of the arbitral panel, including those of the administrative personnel necessary for the conduct of the arbitration process, should be borne by the competent authority to which the case giving rise to the arbitration was initially presented, as long as that competent authority is required to arrange such meetings and provide the administrative personnel (see paragraph 12 of the sample agreement). In most cases, that competent authority will use meeting facilities and personnel that it already has at its disposal and it would seem inappropriate to try to allocate part of the costs thereof to the other competent authority. Clearly, the reference to "costs related to the meetings" does not include the travel and accommodation costs incurred by the participants; these are dealt with above.

31. The other costs (not including any costs resulting from the taxpayers' participation in the process) should be borne equally by the two competent authorities as long as they have agreed to incur the relevant expenses. This would include costs related to translation and recording that both competent authorities have agreed to provide. In the absence of such agreement, the party that has requested that particular costs be incurred should pay for these.

32. As indicated in paragraph 13 of the sample agreement, the competent authorities may, however, agree to a different allocation of

costs. Such agreement can be included in the Terms of Reference or be made afterwards (*e.g.* when unforeseen expenses arise).

Applicable legal principles

33. An examination of the issues on which competent authorities have had difficulties reaching an agreement shows that these are typically matters of treaty interpretation or of applying the arm's length principle underlying Article 9 and paragraph 2 of Article 7. As provided in paragraph 14 of the sample agreement, matters of treaty interpretation should be decided by the arbitrators in light of the principles of interpretation incorporated in Articles 31 to 34 of the *Vienna Convention on the Law of Treaties*, having regard to these Commentaries as periodically amended, as explained in paragraphs 28 to 36.1 of the Introduction. Issues related to the application of the arm's length principle should similarly be decided in the light of the *OECD Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations*. Since Article 32 of the *Vienna Convention on the Law of Treaties* permits a wide access to supplementary means of interpretation, arbitrators will, in practice, have considerable latitude in determining relevant sources for the interpretation of treaty provisions.

34. In many cases, the application of the provisions of a tax convention depends on issues of domestic law (for example, the definition of immovable property in paragraph 2 of Article 6 depends primarily on the domestic law meaning of that term). As a general rule, it would seem inappropriate to ask arbitrators to make an independent determination of purely domestic legal issues and the description of the issues to be resolved, which will be included in the Terms of Reference, should take this into account. There may be cases, however, where there would be legitimate differences of views on a matter of domestic law and in such cases, the competent authorities may wish to leave that matter to be decided by an arbitrator who is an expert in the relevant area.

35. Also, there may be cases where the competent authorities agree that the interpretation or application of a provision of a tax treaty depends on a particular document (*e.g.* a memorandum of understanding or mutual agreement concluded after the entry into force of a treaty) but may disagree about the interpretation of that document. In such a case, the competent authorities may wish to make express reference to that document in the Terms of Reference.

Arbitration decision

36. Paragraph 15 of the sample agreement provides that where more than one arbitrator has been appointed, the arbitration decision will be determined by a simple majority of the arbitrators. Unless otherwise

provided in the Terms of Reference, the decision is presented in writing and indicates the sources of law relied upon and the reasoning which led to its result. It is important that the arbitrators support their decision with the reasoning leading to it. Showing the method through which the decision was reached is important in assuring acceptance of the decision by all relevant participants.

37. Pursuant to paragraph 16, the arbitration decision must be communicated to the competent authorities and the person who made the request for arbitration within six months from the date on which the Chair notifies in writing the competent authorities and the person who made the request for arbitration that he has received all of the information necessary to begin consideration of the case. However, at any time within two months from the date on which the last arbitrator was appointed, the Chair, with the consent of one of the competent authorities, may notify in writing the other competent authority and the person who made the request for arbitration that he has not received all the information necessary to begin consideration of the case. In that case, a further two months will be given for the necessary information to be sent to the Chair. If the information is not received by the Chair within that period, it is provided that the decision will be rendered within the next six months without taking that information into account (unless both competent authorities agree otherwise). If, on the other hand, the information is received by the Chair within the two month period, that information will be taken into account and the decision will be communicated within six months from the reception of that information.

38. In order to deal with the unusual circumstances in which the arbitrators may be unable or unwilling to present an arbitration decision, paragraph 17 provides that if the decision is not communicated within the relevant period, the competent authorities may agree to extend the period for presenting the arbitration decision or, if they fail to reach such agreement within one month, appoint new arbitrators to deal with the case. In the case of the appointment of new arbitrators, the arbitration process would go back to the point where the original arbitrators were appointed and will continue with the new arbitrators.

Publication of the decision

39. Decisions on individual cases reached under the mutual agreement procedure are generally not made public. In the case of reasoned arbitral decisions, however, publishing the decisions would lend additional transparency to the process. Also, whilst the decision would not be in any sense a formal precedent, having the material in the

public domain could influence the course of other cases so as to avoid subsequent disputes and lead to a more uniform approach to the same issue.

40. Paragraph 15 of the sample agreement therefore provides for the possibility to publish the decision. Such publication, however, should only be made if both competent authorities and the person who made the arbitration request so agree. Also, in order to maintain the confidentiality of information communicated to the competent authorities, the publication should be made in a form that would not disclose the names of the parties nor any element that would help to identify them.

Implementing the decision

41. Once the arbitration process has provided a binding solution to the issues that the competent authorities have been unable to resolve, the competent authorities will proceed to conclude a mutual agreement that reflects that decision and that will be presented to the persons directly affected by the case. In order to avoid further delays, it is suggested that the mutual agreement that incorporates the solution arrived at should be completed and presented to the taxpayer within six months from the date of the communication of the decision. This is provided in paragraph 19 of the sample agreement.

42. Paragraph 2 of Article 25 provides that the competent authorities have the obligation to implement the agreement reached notwithstanding any time limit in their domestic law. Paragraph 5 of the Article also provides that the arbitration decision is binding on both Contracting States. Failure to assess taxpayers in accordance with the agreement or to implement the arbitration decision through the conclusion of a mutual agreement would therefore result in taxation not in accordance with the Convention and, as such, would allow the person whose taxation is affected to seek relief through domestic legal remedies or by making a new request pursuant to paragraph 1 of the Article.

43. Paragraph 20 of the sample agreement deals with the case where the competent authorities are able to solve the unresolved issues that led to arbitration before the decision is rendered. Since the arbitration process is an exceptional mechanism to deal with issues that cannot be solved under the usual mutual agreement procedure, it is appropriate to put an end to that exceptional mechanism if the competent authorities are able to resolve these issues by themselves. The competent authorities may agree on a resolution of these issues as long as the arbitration decision has not been rendered.

B. OTHER PROPOSED CHANGES TO THE COMMENTARY ON ARTICLE 25 OF THE OECD MODEL TAX CONVENTION

17. The 2004 Progress Report recognised the possibility that changes to the Commentary on Article 25 of the OECD Model Tax Convention may have a role in enhancing the effectiveness of the mutual agreement procedure. This is reflected in many of the Progress Report's proposals (which are listed in Annex 1). This section addresses the relevant proposals and includes the changes to the Commentary on Article 25 that the Committee has adopted to deal with each of them. In the changes below, the amendments to the existing Commentary are identified by ***bold italics*** for additions and ~~strikethrough~~ for deletions.

1. *Time limitations*

Proposal: *Work would be undertaken to analyse time limitation requirements and discuss possible solutions in this regard, taking into account the differences in domestic rules. This work could result in the development of guidance on appropriate practices in the MEMAP with a view towards improving transparency on this issue and giving taxpayers an opportunity to protect their position. It could possibly also result in changes to the Commentary on Article 25.*

18. According to paragraph 1 of Article 25 of the Model Tax Convention, the taxpayer must submit the request for a MAP within three years of the first notification of the action resulting in taxation not in accordance with the provisions of the Convention. The 2004 Progress Report indicated that there would be benefits in further elaboration as to when this time period begins to run, and therefore finishes.

19. The areas of uncertainty that have been identified are:

- What point represents the "notification" in a self-assessment environment?
- Upon what event should the time period normally be considered to start?
- When should notification be considered to be given in a case where the source country levies a withholding tax contrary to the provisions of the Convention but the double taxation only arises when the residence country later reassesses the taxpayer to deny a foreign tax credit, say four years after the withholding tax was originally levied?
- Whether the MAP period should run during the domestic proceeding undertaken before the MAP request is filed (treating MAP time periods

for initiation as running during domestic proceedings may result in a taxpayer's inadvertently losing his access to MAP)?

– How to deal with cases where the taxpayer is within time to take the necessary action but where the length of time during which records must be kept under domestic law has expired?

Changes to the Commentary

20. The following are the changes to the Commentary that have been drafted to deal with these issues:

Replace paragraph 18 of the Commentary on Article 25 by the following:

18. The provision fixing the starting point of the three-year time limit as the date of the "first notification of the action resulting in taxation not in accordance with the provisions of the Convention" should be interpreted in the way most favourable to the taxpayer. Thus, even if such taxation should be directly charged in pursuance of an administrative decision or action of general application, the time limit begins to run only from the date of the notification of the individual action giving rise to such taxation, that is to say, under the most favourable interpretation, from the act of taxation itself, as evidenced by a notice of assessment or an official demand or other instrument for the collection or levy of tax. *[the rest of the existing paragraph becomes part of the new paragraph 18.3]* ***Since a taxpayer has the right to present a case as soon as the taxpayer considers that taxation will result in taxation not in accordance with the provisions of the Convention, whilst the three-year limit only begins when that result has materialised, there will be cases where the taxpayer will have the right to initiate the mutual agreement procedure before the three-year time limit begins (see the examples of such a situation given in paragraph 12 above)***.

18.1 In most cases it will be clear what constitutes the relevant notice of assessment, official demand or other instrument for the collection or levy of tax, and there will usually be domestic law rules governing when that notice is regarded as "given". Such domestic law will usually look to the time when the notice is sent (time of sending), a specific number of days after it is sent, the time when it would be expected to arrive at the address it is sent to (both of which are times of presumptive physical receipt), or the time when it is in fact physically received (time of actual physical receipt). Where there are no such rules, either the time of actual physical receipt or, where this is not sufficiently evidenced, the time when the notice would normally be expected to have arrived at the relevant address should usually be treated as the time of notification, bearing in mind that this provision should be interpreted in the way most favourable to the taxpayer.

18.2 In self assessment cases, there will usually be some notification effecting that assessment (such as a notice of a liability or of denial or adjustment of a claim for refund), and generally the time of notification, rather than the time when the taxpayer lodges the self-assessed return, would be a starting point for the three year period to run. There may, however, be cases where there is no notice of a liability or the like. In such cases, the relevant time of "notification" would be the time when the taxpayer would, in the normal course of events, be regarded as having been made aware of the taxation that is in fact not in accordance with the Convention. This could, for example, be when information recording the transfer of funds is first made available to a taxpayer, such as in a bank balance or statement. The time begins to run whether or not the taxpayer actually regards the taxation, at that stage, as contrary to the Convention, provided that a reasonably prudent person in the taxpayer's position would have been able to conclude at that stage that the taxation was not in accordance with the Convention. In such cases, notification of the fact of taxation to the taxpayer is enough. Where, however, it is only the combination of the self assessment with some other circumstance that would cause a reasonably prudent person in the taxpayer's position to conclude that the taxation was contrary to the Convention (such as a judicial decision determining the imposition of tax in a case similar to the taxpayer's to be contrary to the provisions of the Convention), the time begins to run only when the latter circumstance materialises.

18.3 If the tax is levied by deduction at the source, the time limit begins to run from the moment when the income is paid; however, if the taxpayer proves that only at a later date did he know that the deduction had been made, the time limit will begin from that date. ~~Furthermore,~~ ~~w~~**W**here it is the combination of decisions or actions taken in both Contracting States ~~resulting~~ ***that results*** in taxation not in accordance with the Convention, ~~it~~ ***the time limit*** begins to run only from the first notification of the most recent decision or action. ***This means that where, for example, a Contracting State levies a tax that is not in accordance with the Convention but the other State provides relief for such tax pursuant to Article 23 A or Article 23 B so that there is no double taxation, a taxpayer will in practice often not initiate the mutual agreement procedure in relation to the action of the first State. If, however, the other State subsequently notifies the taxpayer that the relief is denied so that double taxation now arises, a new time limit begins from that notification, since the combined actions of both States then result in the taxpayer's being subjected to double taxation contrary to the provisions of the Convention. In some cases, especially of this type, the records held by taxing authorities may have been routinely destroyed before the period of the time limit ends, in accordance***

with the normal practice of one or both of the States. The Convention obligations do not prevent such destruction, or require a competent authority to accept the taxpayer's arguments without proof, but in such cases the taxpayer should be given the opportunity to supply the evidential deficiency, as the mutual agreement procedure continues, to the extent domestic law allows. In some cases, the other Contracting State may be able to provide sufficient evidence, in accordance with Article 26 of the Model Tax Convention. It is, of course, preferable that such records be retained by tax authorities for the full period during which a taxpayer is able to seek to initiate the mutual agreement procedure in relation to a particular matter.

18.4 The three-year period continues to run during any domestic law (including administrative) proceedings (e.g. a domestic appeal process). This could create difficulties by in effect requiring a taxpayer to choose between domestic law and mutual agreement procedure remedies. Some taxpayers may rely solely on the mutual agreement procedure, but many taxpayers will attempt to address these difficulties by initiating a mutual agreement procedure whilst simultaneously initiating domestic law action, even though the domestic law process is initially not actively pursued. This could result in mutual agreement procedure resources being inefficiently applied. Where domestic law allows, some States may wish to specifically deal with this issue by allowing for the three-year (or longer) period to be suspended during the course of domestic law proceedings. Two approaches, each of which is consistent with Article 25 are, on one hand, requiring the taxpayer to initiate the mutual agreement procedure, with no suspension during domestic proceedings, but with the competent authorities not entering into talks in earnest until the domestic law action is finally determined, or else, on the other hand, having the competent authorities enter into talks, but without finally settling an agreement unless and until the taxpayer agrees to withdraw domestic law actions. This second possibility is discussed at paragraph 31 of this Commentary. In either of these cases, the taxpayer should be made aware that the relevant approach is being taken. Whether or not a taxpayer considers that there is a need to lodge a "protective" appeal under domestic law (because, for example, of domestic limitation requirements for instituting domestic law actions) the preferred approach for all parties is often that the mutual agreement procedure should be the initial focus for resolving the taxpayer's issues, and for doing so on a bilateral basis.

2. *Probability of taxation not in accordance with the Convention*

Proposal: *Changes in the Commentary would be developed dealing with the "probability" of taxation not in accordance with the Convention and giving*

> *guidance as to how to apply this requirement, including what can be done to ensure that the taxpayer is aware that the time period has begun to run.*

21. As noted by paragraph 12 of the OECD Model Tax Convention Commentary on Article 25, to set the taxpayer initiated MAP action in progress the taxpayer need only establish a risk which is not merely possible but probable that the actions of one or both of the Contracting States would result in taxation not in accordance with the Convention. It was decided to elaborate further on what constitutes a "practical probability", perhaps including noting that in borderline cases, it is appropriate to give the benefit of the doubt to the taxpayer.

22. There are sometimes related issues about the point in time when the taxpayer is able to know that the opportunity to initiate MAP has first arisen, and whether there are guidelines or other possibilities that can help deal with situations where the taxpayer may not know about the probability of double taxation until a considerable part of the period for initiating MAP has elapsed (see the example at paragraph 20 of the Progress Report of a withholding tax payment on which a foreign tax credit is later denied).

23. In particular it was agreed to make it clearer that the "practical probability" approach does not mean that the taxpayer need prove this to a 51% probability, for example. It has also been agreed to provide some clarification about at what point of time the issue of the probability of taxation arises in a self-assessment case, whilst recognising that this may vary according to the characteristics of particular self-assessment systems.

Changes to the Commentary

24. The following are the changes to the Commentary that have been drafted to deal with these issues:

Replace paragraph 12 of the Commentary on Article 25 by the following:

> 12. It should be noted that the mutual agreement procedure, unlike the disputed claims procedure under domestic law, can be set in motion by a taxpayer without waiting until the taxation considered by him to be "not in accordance with the Convention" has been charged against or notified to him. To be able to set the procedure in motion, he must, and it is sufficient if he does, establish that the "actions of one or both of the Contracting States" will result in such taxation, and that this taxation appears as a risk which is not merely possible but probable. Such actions mean all acts or decisions, whether of a legislative or a regulatory nature, and whether of general or individual application, having as their direct and necessary consequence the charging of tax against the complainant contrary to the provisions of the Convention. ***Thus, for example, if a change to a Contracting State's tax law would result in a person deriving a***

particular type of income being subjected to taxation not in accordance with the Convention, that person could set the mutual agreement procedure in motion as soon as the law has been amended and that person has derived the relevant income or it becomes probable that the person will derive that income. Other examples include filing a return in a self assessment system or the active examination of a specific taxpayer reporting position in the course of an audit, to the extent that either event creates the probability of taxation not in accordance with the Convention (e.g. where the self assessment reporting position the taxpayer is required to take under a Contracting State's domestic law would, if proposed by that State as an assessment in a non-self assessment regime, give rise to the probability of taxation not in accordance with the Convention, or where circumstances such as a Contracting State's published positions or its audit practice create a significant likelihood that the active examination of a specific reporting position such as the taxpayer's will lead to proposed assessments that would give rise to the probability of taxation not in accordance with the Convention). Another example might be a case where a Contracting State's transfer pricing law requires a taxpayer to report taxable income in an amount greater than would result from the actual prices used by the taxpayer in its transactions with a related party, in order to comply with the arm's length principle, and where there is substantial doubt whether the taxpayer's related party will be able to obtain a corresponding adjustment in the other Contracting State in the absence of a mutual agreement procedure. As indicated by the opening words of paragraph 1, whether or not the actions of one or both of the Contracting States will result in taxation not in accordance with the Convention must be determined from the perspective of the taxpayer. Whilst the taxpayer's belief that there will be such taxation must be reasonable and must be based on facts that can be established, the tax authorities should not refuse to consider a request under paragraph 1 merely because they consider that it has not been proven (for example to domestic law standards of proof on the "balance of probabilities") that such taxation will occur.

12.1 Since the first steps in a mutual agreement procedure may be set in motion at a very early stage based upon the mere probability of taxation not in accordance with the Convention, the initiation of the procedure in this manner would not be considered the presentation of the case to the competent authority for the purposes of determining the start of the two-year period referred to in paragraph 5 of the Article. Paragraph 8 of the annex to the Commentary on Article 25 describes the circumstances in which that two-year period commences.

3. *Denial of access to the MAP*

Proposal: The circumstances in which a taxpayer should be denied access to the MAP would be analysed together with a discussion of possible appropriate practices in this regard, taking into account the differing domestic law circumstances in different countries. This analysis would be reflected in the MEMAP, and, if it were thought necessary, in the Commentary to Article 25.

25. In some cases, notwithstanding paragraph 1 of Article 25, countries refuse to enter into the mutual agreement procedure where they consider that the relevant taxpayer has engaged in fraud or certain kinds of tax avoidance in relation to the case for which MAP is sought. A complication is that different States take different views of when the test is met.

Changes to the Commentary

26. The following are the changes to the Commentary that have been drafted to deal with these issues:

Add the following paragraphs immediately after paragraph 18.4 of the Commentary on Article 25, as amended in accordance with Proposal 2 above:

18.5 Some States may deny the taxpayer the ability to initiate the mutual agreement procedure under paragraph 1 of Article 25 in cases where the transactions to which the request relates are regarded as abusive. This issue is closely related to the issue of "improper use of the Convention" discussed in paragraph 9.1 and following of the Commentary on Article 1. In the absence of a special provision, there is no general rule denying perceived abusive situations going to the mutual agreement procedure, however. The simple fact that a charge of tax is made under an avoidance provision of domestic law should not be a reason to deny access to mutual agreement. However, where serious violations of domestic laws resulting in significant penalties are involved, some States may wish to deny access to MAP. The circumstances in which a State would deny access to MAP should be made clear in the Convention.

18.6 Some States regard certain issues as not susceptible to resolution by the mutual agreement procedure generally, or at least by taxpayer initiated mutual agreement procedure, because of constitutional or other domestic law provisions or decisions. An example would be a case where granting the taxpayer relief would be contrary to a final court decision that the tax authority is required to adhere to under that State's constitution. The recognised general principle for tax and other treaties is that domestic law, even domestic constitutional law, does not justify a failure to meet treaty obligations, however. Article 27 of the Vienna Convention on the Law of Treaties reflects this general principle of treaty law. It follows that any

justification for what would otherwise be a breach of the Convention needs to be found in the terms of the Convention itself, as interpreted in accordance with accepted tax treaty interpretation principles. Such a justification would be rare, because it would not merely govern how a matter will be dealt with by the two States once the matter is within the mutual agreement procedure, but would instead prevent the matter from even reaching the stage when it is considered by both States. Since such a determination might in practice be reached by one of the States without consultation with the other, and since there might be a bilateral solution that therefore remains unconsidered, the view that a matter is not susceptible of taxpayer initiated mutual agreement procedure should not be lightly made, and needs to be supported by the terms of the Convention as negotiated. A competent authority relying upon a domestic law impediment as the reason for not allowing the mutual agreement procedure to be initiated by a taxpayer should inform the other competent authority of this and duly explain the legal basis of its position. More usually, genuine domestic law impediments will not prevent a matter from entering into the mutual agreement procedure, but if they will clearly and unequivocally prevent a competent authority from resolving the issue in a way that avoids taxation of the taxpayer which is not in accordance with the Convention, and there is no realistic chance of the other State resolving the issue for the taxpayer, then that situation should be made public to taxpayers, so that taxpayers do not have false expectations as to the likely outcomes of the procedure.

18.7 In other cases, initiation of the mutual agreement procedure may have been allowed but domestic law issues that have arisen since the negotiation of the treaty may prevent a competent authority from resolving, even in part, the issue raised by the taxpayer. Where such developments have a legally constraining effect on the competent authority, so that bilateral discussions can clearly not resolve the matter, most States would accept that this change of circumstances is of such significance as to allow that competent authority to withdraw from the procedure. In some cases, the difficulty may be only temporary however; such as whilst rectifying legislation is enacted, and in that case, the procedure should be suspended rather than terminated. The two competent authorities will need to discuss the difficulty and its possible effect on the mutual agreement procedure. There will also be situations where a decision wholly or partially in the taxpayer's favour is binding and must be followed by one of the competent authorities but where there is still scope for mutual agreement discussions, such as for example in one competent authority's demonstrating to the other that the latter should provide relief.

18.8 There is less justification for relying on domestic law for not implementing an agreement reached as part of the mutual agreement procedure. The obligation of implementing such agreements is unequivocally stated in the last sentence of paragraph 2, and impediments to implementation that were already existing should generally be built into the terms of the agreement itself. As tax conventions are negotiated against a background of a changing body of domestic law that is sometimes difficult to predict, and as both parties are aware of this in negotiating the original Convention and in reaching mutual agreements, subsequent unexpected changes that alter the fundamental basis of a mutual agreement would generally be considered as requiring revision of the agreement to the extent necessary. Obviously where there is a domestic law development of this type, something that should only rarely occur, good faith obligations require that it be notified as soon as possible, and there should be a good faith effort to seek a revised or new mutual agreement, to the extent the domestic law development allows. In these cases, the taxpayer's request should be regarded as still operative, rather than a new application's being required from that person.

4. *Suspension of collection of tax*

Proposal: An analysis of country practices concerning the suspension of collection of tax during the MAP process would be made and an attempt to reach a consensus position that alternative methods of ensuring collection and otherwise protecting government interests could be developed. The outcome of this work could be included in the MEMAP and, to the extent deemed appropriate, in the Commentary.

27. In some States, a MAP will not be commenced unless and until payment of the tax obligation has been made. In other cases, MAP can start but tax collection is not suspended. Such a collection of tax during MAP cases will in most instances impose temporary double taxation on the taxpayer whilst the MAP is in progress because the same profits have been subject to tax in both jurisdictions. As a practical matter, it also creates an issue of liquidity for the taxpayer.

28. It is recognised that country practices may differ here but the question could be raised as to whether the obligations in respect of good faith implementation of the MAP obligation have been met if the taxpayer is forced to pay the unrelieved tax as a condition for entering into the MAP. To the extent that ultimate collectibility was an issue for the government, it would be possible, consistent with principles of proportionality, to provide for some sort of bond or other security procedure in lieu of payment during the MAP.

Changes to the Commentary

29. The following are the changes to the Commentary that have been drafted to deal with these issues:

Add the following paragraphs to the Commentary on Article 25:

31.4 Some States take the view that a mutual agreement procedure may not be initiated by a taxpayer unless and until payment of all or a specified portion of the tax amount in dispute has been made. They consider that the requirement for payment of outstanding taxes, subject to repayment in whole or in part depending on the outcome of the procedure, is an essentially procedural matter not governed by Article 25, and is therefore consistent with it. A contrary view, held by many States, is that Article 25 indicates all that a taxpayer must do before the procedure is initiated, and that it imposes no such requirement. Those States find support for their view in the fact that the procedure may be implemented even before the taxpayer has been charged to tax or notified of a liability (as noted at paragraph 12 above) and in the acceptance that there is clearly no such requirement for a procedure initiated by a competent authority under paragraph 3.

31.5 Article 25 gives no absolutely clear answer as to whether a taxpayer initiated mutual agreement procedure may be denied on the basis that there has not been the necessary payment of all or part of the tax in dispute. However, whatever view is taken on this point, in the implementation of the Article it should be recognised that the mutual agreement procedure supports the substantive provisions of the Convention and that the text of Article 25 should therefore be understood in its context and in light of the object and purposes of the Convention, including avoiding double taxation and the prevention of fiscal evasion and avoidance. States therefore should as far as possible take into account the cash flow and possible double taxation issues in requiring advance payment of an amount that the taxpayer contends was at least in part levied contrary to the terms of the relevant Convention. As a minimum, payment of outstanding tax should not be a requirement to initiate the mutual agreement procedure if it is not a requirement before initiating domestic law review. It also appears, as a minimum, that if the mutual agreement procedure is initiated prior to the taxpayer's being charged to tax (such as by an assessment), a payment should only be required once that charge to tax has occurred.

31.6 There are several reasons why suspension of the collection of tax pending resolution of a mutual agreement procedure can be a desirable policy, although many States may require legislative changes for the purpose of its implementation. Any requirement to pay a tax assessment specifically as a condition of obtaining access to the mutual agreement

R (21)

procedure in order to get relief from that very tax would generally be inconsistent with the policy of making the mutual agreement procedure broadly available to resolve such disputes. Even if a mutual agreement procedure ultimately eliminates any double taxation or other taxation not in accordance with the Convention, the requirement to pay tax prior to the conclusion of the mutual agreement procedure may permanently cost the taxpayer the time value of the money represented by the amount inappropriately imposed for the period prior to the mutual agreement procedure resolution, at least in the fairly common case where the respective interest policies of the relevant Contracting States do not fully compensate the taxpayer for that cost. Thus, this means that in such cases the mutual agreement procedure would not achieve the goal of fully eliminating, as an economic matter, the burden of the double taxation or other taxation not in accordance with the Convention. Moreover, even if that economic burden is ultimately removed, a requirement on the taxpayer to pay taxes on the same income to two Contracting States can impose cash flow burdens that are inconsistent with the Convention's goals of eliminating barriers to cross border trade and investment. Finally, another unfortunate complication may be delays in the resolution of cases if a country is less willing to enter into good faith mutual agreement procedure discussions when a probable result could be the refunding of taxes already collected. Where States take the view that payment of outstanding tax is a precondition to the taxpayer initiated mutual agreement procedure, this should be notified to the treaty partner during negotiations on the terms of a Convention. Where both States party to a Convention take this view, there is a common understanding, but also the particular risk of the taxpayer's being required to pay an amount twice. Where domestic law allows it, one possibility which States might consider to deal with this would be for the higher of the two amounts to be held in trust, escrow or similar, pending the outcome of the mutual agreement procedure. Alternatively, a bank guarantee provided by the taxpayer's bank could be sufficient to meet the requirements of the competent authorities. As another approach, one State or the other (decided by time of assessment, for example, or by residence State status under the treaty) could agree to seek a payment of no more than the difference between the amount paid to the other State, and that which it claims, if any. Which of these possibilities is open will ultimately depend on the domestic law (including administrative requirements) of a particular State, but they are the sorts of options that should as far as possible be considered in seeking to have the mutual agreement procedure operate as effectively as possible. Where States require some payment of outstanding tax as a precondition to the taxpayer initiated mutual agreement procedure, or to the active consideration of an issue within that procedure, they should have a

system in place for refunding an amount of interest on any underlying amount to be returned to the taxpayer as the result of a mutual agreement reached by the competent authorities. Any such interest payment should sufficiently reflect the value of the underlying amount and the period of time during which that amount has been unavailable to the taxpayer.

5. *Suspension or remission of interest and penalties*

Proposal: *An analysis of country practices concerning the suspension or remission of interest and penalties during the MAP process would be made and an attempt to reach a consensus position as to whether and when the suspension of interest obligations and penalty payments is appropriate could be developed. The outcome of this work could be included in the MEMAP and, to the extent deemed appropriate, in the Commentary.*

30. This issue relates in some ways to the suspension of tax collection issue, but has some distinct features. Where MAP is initiated before the notice making a tax bill due and payable has issued, there is a good case for arguing that the accumulation of interest charges should be suspended for at least such of the time taken to settle the issue as is not due to the taxpayer's failure to provide information in a reasonable time. In other cases, there seems less justification for suspension of interest charges, particularly if the taxpayer has had ample opportunity to seek MAP on the point before this time.

31. Another related issue is whether interest should be suspended or remitted if there is offsetting interest paid on any overpayment in the other country. Similarly, there is the question of what consideration should be given to the tax treatment of the interest (taxed or deducted) in the other country.

Changes to the Commentary

32. The following are the changes to the Commentary that have been drafted to deal with these issues:

Add the following paragraph to the Commentary on Article 25:

31.7 States take differing views as to whether administrative interest and penalty charges are treated as taxes covered by Article 2 of the Convention. Some States treat them as taking the character of the underlying amount in dispute, but other States do not. It follows that there will be different views as to whether such interest and penalties are subject to a taxpayer initiated mutual agreement procedure. Where they are covered by the Convention as taxes to which it applies, the object of the Convention in avoiding double taxation, and the requirement for States to implement conventions in good faith, suggest that as far as possible interest and penalty payments should not be imposed in a way that effectively discourages taxpayers from initiating a mutual agreement procedure, because of the cost and the cash

> ***flow impact that this would involve. Even when administrative interest and penalties are not regarded as taxes covered by the Convention under Article 2, they should not be applied in a way that severely discourages or nullifies taxpayer reliance upon the benefits of the Convention, including the right to initiate the mutual agreement procedure as provided by Article 25. For example, a State's requirements as to payment of outstanding penalties and interest should not be more onerous to taxpayers in the context of the mutual agreement procedure than they would be in the context of taxpayer initiated domestic law review.***

6. *MAP and corresponding adjustments*

Proposal: The Commentary to Article 25 would be clarified to indicate the circumstances in which the MAP can be applicable in situations involving corresponding adjustments.

33. Paragraph 10 of the Commentary to Article 25 specifically addresses the relationship between Articles 9 and 25 (including where there is no equivalent to paragraph 2 of Article 9):

… most member countries consider that economic double taxation resulting from adjustments made to profits by reason of transfer pricing is not in accordance with — at least — the spirit of the Convention and falls within the scope of the mutual agreement procedure set up under Article 25. States which do not share this view do, however, in practice, find the means of remedying economic double taxation in most cases involving *bona fide* companies by making use of provisions in their domestic laws.

34. Despite the discussion at paragraphs 8-10 of the Commentary on Article 25, there have been problems with whether the MAP can still be applied where States do not include Article 9(2) in their bilateral treaties. It was agreed to clarify the relationship between the "corresponding adjustments" of Article 9(2) and the MAP to make clearer that the MAP is not dependent on the existence of Article 9(2) in the particular bilateral treaty.

Changes to the Commentary

35. The following are the changes to the Commentary that have been drafted to deal with these issues:

Replace paragraph 10 of the Commentary on Article 25 by the following:

> 10. This in fact is implicit in the wording of paragraph 2 of Article 9 when the bilateral convention in question contains a clause of this type. When the bilateral convention does not contain rules similar to those of paragraph 2 of Article 9 (as is usually the case for conventions signed before 1977) the mere fact that Contracting States inserted in the

convention the text of Article 9, as limited to the text of paragraph 1 — which usually only confirms broadly similar rules existing in domestic laws — indicates that the intention was to have economic double taxation covered by the Convention. As a result, most member countries consider that economic double taxation resulting from adjustments made to profits by reason of transfer pricing is not in accordance with — at least — the spirit of the convention and falls within the scope of the mutual agreement procedure set up under Article 25. *[the rest of the existing paragraph becomes the last sentence of paragraph 10.1]*

10.1 Whilst the mutual agreement procedure has a clear role in dealing with issues arising as to the sorts of adjustments referred to in paragraph 2 of Article 9, it follows that even in the absence of such a provision, States should be seeking to avoid double taxation, including by giving corresponding adjustments in cases of the type contemplated in paragraph 2. While there may be some difference of view, States would therefore generally regard a taxpayer initiated mutual agreement procedure based upon economic double taxation contrary to the terms of Article 9 as encompassing issues of whether a corresponding adjustment should have been provided, even in the absence of a provision similar to paragraph 2 of Article 9. States which do not share this view do, however, in practice, find the means of remedying economic double taxation in most cases involving *bona fide* companies by making use of provisions in their domestic laws.

7. Relationship between domestic law and the MAP

Proposal: Country issues concerning the relationship between domestic law and the MAP process would be analysed and addressed with a view to allowing the MAP to operate to the fullest extent possible, taking into account the possible constitutional and other legal limitations in the domestic legal systems. The outcomes of this work could be reflected in the MEMAP and/ or in changes to the Articles of the Model Tax Convention or to the Commentary.

36. Possible domestic law limitations on taxpayers initiating the mutual agreement procedure have already been noted, as has the general principle that States should not lightly take the view that such limitations prevent the initiation of the mutual agreement procedure (see Proposal 4 above). Other domestic law constraints may not prevent initiation of the procedure but may prevent an agreement's being reached by the competent authorities. Whilst there is no presumption that domestic law constraints operate to prevent an agreement's being reached and States have a good faith obligation to consider seriously whether an agreement can be reached notwithstanding the

apparent existence of a domestic law constraint, it is acknowledged that the following are typical situations where this issue could arise:

- A State takes the view that no agreement can be reached under MAP while the same issue is actively being pursued under its domestic law dispute resolution mechanism, *e.g.* through litigation concerning the taxpayer involved in the MAP or some other taxpayer. Whilst this view in itself is compatible with the provisions of the Convention, its implementation can create difficulties as discussed in paragraph 31 of the Commentary on Article 25.
- A State takes the position that domestic law rules are not specifically overridden by the provisions of the treaty and, as a result, its competent authority considers that it does not have the legal authority to reach a satisfactory solution that would differ from domestic law. A specific case is that of time limits: a number of countries do not include the second sentence of paragraph 2 of Article 25 in their treaties and condition the implementation of mutual agreements on their domestic time limitations, which prevents them from agreeing to otherwise appropriate solutions that would force them to ignore these limitations.
- A court decision in a particular case has been rendered in one State (concerning the taxpayer involved in MAP or some other taxpayer) and the competent authority of that state considers that there is no legal authority to agree to a different solution of that case in the context of MAP.
- There is a judicial or statutory interpretation of a treaty rule in one State which is not shared by the other State and the competent authority of the first State considers that there is no legal authority to agree to a different interpretation under the MAP procedure.

37. These issues can also arise at the time of implementing a solution that has been arrived at under the MAP although one would expect that the competent authorities would not agree to a solution which they would know in advance could not be implemented under their domestic law.

Changes to the Commentary

38. The following are the changes to the Commentary that have been drafted to deal with these issues:

Replace paragraph 31 of the Commentary on Article 25 by the following:

31. ~~Finally, t~~ The case may arise where a mutual agreement is concluded in relation to a taxpayer who has brought a suit for the same purpose in the competent court of either Contracting State and such suit is still pending. In such a case, there would be no grounds for rejecting a

request by a taxpayer that he be allowed to defer acceptance of the solution agreed upon as a result of the mutual agreement procedure until the court had delivered its judgment in tha**t** suit ~~still pending~~. *[the rest of the existing paragraph becomes the last part of paragraph 31.2, with some modifications]* ***Also, a view that competent authorities might reasonably take is that where the taxpayer's suit is ongoing as to the particular issue upon which mutual agreement is sought by that same taxpayer, discussions of any depth at the competent authority level should await a court decision. If the taxpayer's request for a mutual agreement procedure applied to different tax years than the court action, but to essentially the same factual and legal issues, so that the court outcome would in practice be expected to affect the treatment of the taxpayer in years not specifically the subject of litigation, the position might be the same, in practice, as for the cases just mentioned. In either case, awaiting a court decision or otherwise holding a mutual agreement procedure in abeyance whilst formalised domestic recourse proceedings are underway will not infringe upon, or cause time to expire from, the two-year period referred to in paragraph 5 of the Article. Of course, if competent authorities consider, in either case, that the matter might be resolved notwithstanding the domestic law proceedings (because, for example, the competent authority where the court action is taken will not be bound or constrained by the court decision) then the mutual agreement procedure may proceed as normal.***

31.1 The situation is also different if there is a suit ongoing on an issue, but the suit has been taken by another taxpayer than the one who is seeking to initiate the mutual agreement procedure. In principle, if the case of the taxpayer seeking the mutual agreement procedure supports action by one or both competent authorities to prevent taxation not in accordance with the Convention, that should not be unduly delayed pending a general clarification of the law at the instance of another taxpayer - although the taxpayer seeking mutual agreement might agree to this if the clarification is likely to favour that taxpayer's case. In other cases, delaying competent authority discussions as part of a mutual agreement procedure may be justified in all the circumstances, but the competent authorities should as far as possible seek to prevent disadvantage to the taxpayer seeking mutual agreement in such a case. This could be done, where domestic law allows, by deferring payment of the amount outstanding during the course of the delay, or at least during that part of the delay which is beyond the taxpayer's control.

31.2 Depending upon domestic procedures, the choice of redress is normally that of the taxpayer and in most cases it is the domestic recourse provisions such as appeals or court proceedings that are held in abeyance in

favour of the less formal and bilateral nature of mutual agreement procedure.

31.3 As noted above, there may be a pending suit by the taxpayer on an issue, or else the taxpayer may have preserved the right to take such domestic law action, yet the competent authorities might still consider that an agreement can be reached. In such cases, it is, however, ~~On the other hand, it is~~ necessary to take into account the concern of ~~the~~ ***a particular*** competent authority to avoid any divergence***s*** or contradiction***s*** between the decision of the court and the mutual agreement ***that is being sought***, with the difficulties or risks of abuse that the~~s~~***se*** could entail. In short, therefore, ~~it seems normal that~~ the implementation of ***such*** a mutual agreement should ***normally*** be made subject:

- to the acceptance of such mutual agreement by the taxpayer, and
- to the taxpayer's withdrawal of ~~his~~ ***the*** suit at law concerning ~~the~~ ***those*** points settled in the mutual agreement.

8. *Scope of paragraph 3 of Article 25*

Proposal: The appropriate scope for paragraph 3 of Article 25 should be examined, in particular in connection with double taxation of branches of the same taxpayer, with a view to suggesting in the Commentary possible solutions to the problems

39. This item was Proposal 6 for "Future Study" in the 2004 Progress Report. Paragraph 3 of Article 25 states (emphasis added) that: "[t]he competent authorities of the Contracting States *shall endeavour to resolve by mutual agreement* any difficulties or doubts arising as to the interpretation or application of the Convention. They *may also consult* together for the elimination of double taxation in cases not provided for in the Convention." The general view seems to be that the design of paragraph 3, first sentence, is directed towards a general "housekeeping" of the Convention, rather than to deal with a particular case, but as such cases may point to more systemic issues, the paragraph does not, of course, prevent MAP from being initiated on an issue arising in a particular case, or prevent a competent authority from seeking a result that is in fact beneficial to a particular taxpayer. Paragraph 3 emphasizes the facilitative aspect of MAP, which contributes to ensuring the continuing relevance of tax treaties designed to last for a considerable period of time.

40. The second sentence of paragraph 3 is more directly aimed at particular cases but is also clearly the language of facilitation or authorisation rather than of treaty obligation. The provision makes clear that a treaty in OECD Model form does not prevent such consultations on matters not covered by

 MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

the Convention from occurring, indeed it is clearly intended to "invite" them (see paragraph 3 of the Commentary on Article 25). The provision gives great flexibility as to how the consultations occur.

41. The second sentence also does not by its terms afford taxpayers the same right of initiation as under paragraph 1 for matters relating to the Convention, yet it also does not prevent competent authorities from together allowing such rights. In practical terms, a competent authority may choose to seek MAP under paragraph 3 after an issue has been drawn to its attention by a taxpayer, although such a request is not, of course, necessary for that competent authority to institute MAP.

42. Whilst there has been little experience with cases arising under paragraph 3 of Article 25, the issues may well become more important in the future because of the work being done on the attribution of profits to a permanent establishment. Under the methodology adopted in the work, there is for the first time a framework that could permit the resolution of extremely complex questions concerning the allocation of profit between branches of the same taxpayer in different States, such as the attribution of capital to bank branches.

43. Since such branches are not residents of the countries involved in the potential dispute over profit attribution, the MAP foreseen in paragraphs 1 and 2 of Article 25 is not available and the only potential MAP relief from double taxation arises, instead, under paragraph 3. Indeed, paragraph 37 of the Commentary on Article 25 notes that the second sentence of paragraph 3 of Article 25 might be used to help disputes in the PE context described above, and encourages its use to avoid double taxation. However, paragraph 37 goes on to point out some problems for some Contracting States in applying this paragraph – States where domestic law prevents the treaty from being "complemented on points which are not explicitly or at least implicitly dealt with". Also a number of States do not include the second sentence of paragraph 3 in their bilateral treaties for this or other reasons.

44. The 2004 Progress Report noted these issues and considered that it would thus be appropriate to re-examine paragraph 3 of the Article to make sure that it is more widely available for use in appropriate cases.

Changes to the Commentary

45. The following are the changes to the Commentary that have been drafted to deal with these issues:

Replace paragraph 37 of the Commentary on Article 25 by the following:

37. The second sentence of paragraph 3 enables the competent authorities to deal also with such cases of double taxation as do not come within the scope of the provisions of the Convention. Of special

interest in this connection is the case of a resident of a third State having permanent establishments in both Contracting States. It is ~~of course~~ ***not merely*** desirable***, but in most cases also will particularly reflect the role of Article 25 and the mutual agreement procedure in providing that the competent authorities may consult together as a way of ensuring the Convention as a whole operates effectively,*** that the mutual agreement procedure should result in the effective elimination of the double taxation which can occur in such a situation. ***The opportunity for such matters to be dealt with under the mutual agreement procedure becomes increasingly important as Contracting States seek more coherent frameworks for issues of profit allocation involving branches, and this is an issue that could usefully be discussed at the time of negotiating conventions or protocols to them. There will be*** ~~An exception must, however, be made for the case of~~ Contracting States whose domestic law prevents the Convention from being complemented on points which are not explicitly or at least implicitly dealt with~~;~~ ***in the Convention, however, and*** ~~in such a case~~ ***in these situations*** the Convention could be complemented ~~only~~ by a protocol ~~subject, like the Convention itself, to ratification or approval~~ ***dealing with this issue***. ***In most cases, however, the terms of the Convention itself, as interpreted in accordance with accepted tax treaty interpretation principles, will sufficiently support issues involving two branches of a third state entity being subject to the paragraph 3 procedures.***

C. FOLLOW-UP TO OTHER PROPOSALS OF THE 2004 PROGRESS REPORT

46. This section describes the follow-up work done on other proposals included in the 2004 Progress Report. As explained below, the main results from that work have been the development of a Manual on Effective Mutual Agreement Procedure (MEMAP) (see subsection 1 below) and the development of a reporting framework for mutual agreement cases (see subsection 2 below).

1. Manual on Effective Mutual Agreement Procedure

Proposal: A Manual on Effective Mutual Agreement Procedure practices ("MEMAP") would be developed for both tax administrations and taxpayers. The positions taken in the Manual would not be binding on member countries but would reflect the analysis done in connection with the particular issue. The MEMAP would discuss appropriate practices and possible alternative approaches to issues considered by the Committee.

47. In accordance with this proposal, a Manual on Effective Mutual Agreement Procedure ("MEMAP") has been developed. This manual is available online in electronic form at www.oecd.org/ctp/memap. The MEMAP explains the various stages of the mutual agreement procedure, discusses various issues related to that procedure and, where appropriate, describes best practices.

2. MAP reporting framework

Proposal: The possibility of developing some kind of analysis of the ongoing status of MAP cases in member countries would be explored, including the type of information that would be disclosed.

48. Two key objectives of the work of the Committee were to improve the timeliness of processing and completing MAP cases and to enhance the overall transparency of the MAP procedure. It was therefore agreed that member countries would prepare and submit to the OECD annual reports containing some basic information about their MAP caseload. It was felt that such annual reports would provide valuable information to both tax administrations and taxpayers. These reports will be prepared as follows:

- Countries will be asked to report on the status of their MAP caseload for each 12-month reporting period on the basis of the table that appears in annex 2. This table requires reporting of MAP cases for a given reporting period as follows: opening and closing inventory of MAP cases; the number of cases initiated during the year; the number of cases completed during the year; the number of cases withdrawn or closed during the year without full resolution of double taxation; and,

optionally, the average cycle time for cases completed, closed or withdrawn during the year; with all of these columns broken down by the year the MAP case was initiated.

– The reports will be made available through the OECD website and will be updated annually, along with periodic updates to the country profiles that are already available through that site.

49. With this MAP reporting structure, taxpayers will have a better understanding of a country's MAP program and may be in a better position to make a decision on their course of action. Tax administrations should also find this information useful in evaluating the performance of their MAP program.

50. The definitions accompanying the reporting template are intended to ensure reasonably consistent reporting among countries, while incorporating some flexibility to recognise countries' different data collection practices. For example, some countries collect data on a calendar year basis, whereas others collect data on the basis of a different 12-month period. The template is designed to accommodate such differences, while retaining the goal of obtaining reasonably contemporaneous statistics from reporting countries.

51. Further statistics, similar to statistics that some countries currently report (*e.g.* breakdown by issue, industry or treaty partner, or by reference to whether cases are domestically or foreign-initiated), could be included in the future if a consensus could be reached that such additional data would not be overly burdensome to compile and would not risk identifying individual taxpayer cases. In the meantime, countries that wish to report these additional statistics are encouraged to do so via a web-link in their country profiles.

3. *Partial double taxation relief*

Proposal: The desirability of providing a more articulated mechanism for "partial" double tax relief would be considered further and, if appropriate, changes to the Commentary to reflect these conclusions would be developed. Where partial relief is given, particular attention should be paid to the relationship to Supplementary Dispute Resolution techniques.

52. The Committee has concluded that there was the possibility that work in this area at this stage and in the context of the other MAP work could be seen as endorsing approaches that only provide partial relief of double taxation. For that reason, it was agreed not to pursue that proposal for the time being.

4. *Consistency, competitiveness and non-discrimination*

Proposal: Country experiences in the areas of consistency, competitiveness and non-discrimination could be further analysed to see if it would be desirable to

develop more guidance in the MEMAP and/or the Commentary to Article 25.

53. Whilst the Committee this as an area for possible future work, it did not believe it was in a position to provide particular guidance at this stage and considered that this subject matter would be better addressed as part of other work by Working Party No. 6 on the Taxation of Multinational Enterprises.

5. *Secondary adjustments*

Proposal: The relationship between secondary adjustments and the MAP process could be reviewed with a view toward greater emphasis on the desirability, but not the requirement, that such issues be considered in the MAP process.

54. This issue concerns adjustments on "secondary transactions", by which some States proposing a transfer pricing adjustment provide under their domestic law for a constructive transaction whereby the excess profits resulting from a primary adjustment are treated as having been transferred in a particular form (such as constructive dividends, equity contributions or loans) and are taxed accordingly.

55. The Committee agreed that the issue of secondary adjustments was an important one on which work should be carried out. It therefore agreed that this issue should be further examined by Working Party No. 1 on Tax Conventions and Related Questions and Working Party No. 6 on the Taxation of Multinational Enterprises.

6. *Triangular cases*

Proposal: The possibility of a more explicit and structured approach to the issues raised in connection with "triangular" *cases could be undertaken, looking to suggestions for changes in the Commentary if agreement can be obtained on an appropriate approach and the possibility of developing a multilateral solution.*

56. The Committee concluded that this was a matter of substance related to the broader issue of the application of bilateral treaties in situations involving more than two States. Bearing in mind the work that Working Party No. 1 on Tax Conventions and Related Questions has done on the issue in the past (it produced a report on "Triangular Cases" in 1992) it was agreed that any issue related to triangular cases should be brought to the attention of that Working Party, which could consult with Working Party No. 6 on the Taxation of Multinational Enterprises where appropriate.

ANNEX 1

FOLLOW-UP WORK ON THE PROPOSALS INCLUDED IN THE 2004 PROGRESS REPORT

[*The proposals included in the 2004 Progress Report were divided in three groups: current proposals, proposals for future work and proposals for future study. This Annex lists all the proposals of the Progress Report and, where follow-up work was required by the Committee, refers to the part of this report that describes how the proposal has been dealt with*]

2004 PROGRESS REPORT CURRENT PROPOSALS

1. Countries would review the guidance currently published on domestic rules and procedures for MAP to ensure that it meets the criteria for transparency set out in this note. Such guidance would include the country position on both operational and technical issues. Countries that have not yet published any such guidance are strongly recommended to do so as soon as practicable.

   No follow-up work was required from the Committee.

2. The work on publication of Country Profiles is to be continued, country coverage to be expanded and the profiles are to be kept up to date and expanded to reflect future developments in the ongoing work. In particular, NOEs would be encouraged to participate in the process.

   Follow-up work: the country profiles have been periodically updated and a number of non-OECD countries have added their profile. The updated country profiles can be consulted on the OECD web site at:

   http://www.oecd.org/document/31/0,2340,en_2649_33753_29601439_1_1_1_1,00.html

3. Countries would review the legal authority of the CA and clarify in their Country Profiles the extent of the CA authority and any specific limitations on the issues that can be subject to the MAP.

   No follow-up work was required from the Committee.

4. Countries should review the current MAP processing time frame, resources and structure of their CA function in light of the above analysis and take such steps as are necessary to respond to the issues raised. In particular, they are encouraged to develop and publicise a target or indicative time frame for the processing of MAP cases.

   No follow-up work was required from the Committee.

5. Countries should review the structure of their current practices concerning the steps in the MAP process in the light of the above

analysis and take such steps as are necessary to respond to the issues raised. In particular, keeping the taxpayer informed of the progress of the MAP case (subject to the confidentiality requirements of Article 26) should be given a high priority.

No follow-up work was required from the Committee.

6. Countries should review the structure of their MAP decision-making process in light of the above analysis and take such steps as are necessary to respond to the issues raised. In particular, emphasis should be placed on the fact that cases should be decided on the basis of the merits of each case and in a principled, objective and fair manner.

   No follow-up work was required from the Committee.

7. Countries should review their procedures for the implementation of MAP agreements in the light of the above analysis and take such steps as are necessary to respond to the issues raised. In particular, they are encouraged to develop a time frame ensuring the full implementation of the agreement, including the refund of tax paid.

   No follow-up work was required from the Committee.

8. Countries should review their approach to the effect of a MAP agreement on subsequent years in light of the above analysis and take such steps as are necessary to respond to the issues raised.

   No follow-up work was required from the Committee.

9. While it is clear that MAP agreements do not as such have formal precedential value, countries should review their practices concerning the treatment of other MAP agreements in the context of a particular case with a view to ensuring, to the greatest extent possible, that cases are decided on a principled basis and in a consistent manner.

   No follow-up work was required from the Committee.

2004 PROGRESS REPORT PROPOSALS FOR FUTURE WORK

1. A Manual on Effective Mutual Agreement Procedure practices (“MEMAP”) would be developed for both tax administrations and taxpayers. The positions taken in the Manual would not be binding on member countries but would reflect the analysis done in connection with the particular issue. The MEMAP would discuss appropriate practices and possible alternative approaches to issues considered by the Committee.

   The individual issues which would be covered in such a Manual are discussed in detail in the relevant parts of this Report.

Follow-up work: see section C (1) of this Report.

2. Work would be undertaken to analyse time limitation requirements and discuss possible solutions in this regard, taking into account the differences in domestic rules. This work could result in the development of guidance on appropriate practices in the MEMAP with a view towards improving transparency on this issue and giving taxpayers an opportunity to protect their position. It could possibly also result in changes to the Commentary on Article 25.

Follow-up work: see section B (1) of this Report as well as work done on the MEMAP in section C (1) of this Report.

3. Changes in the Commentary would be developed dealing with the "probability" of taxation not in accordance with the Convention and giving guidance as to how to apply this requirement, including what can be done to ensure that the taxpayer is aware that the time period has begun to run.

Follow-up work: see section B (2) of this Report.

4. The MEMAP would also include a discussion of the issue of "probability" of taxation not in accordance with the Convention.

Follow-up work: see the work done on the MEMAP in section C (1) of this Report.

5. The circumstances in which a taxpayer should be denied access to the MAP would be analysed together with a discussion of possible appropriate practices in this regard, taking into account the differing domestic law circumstances in different countries. This analysis would be reflected in the MEMAP, and, if it were thought necessary, in the Commentary to Article 25.

Follow-up work: see section B (3) of this Report as well as work done on the MEMAP in section C (1) of this Report.

6. The circumstances where domestic law procedural requirements or administrative practices effectively block taxpayer access to MAP would be analysed together with a discussion of appropriate practices in this regard, taking into account the differing domestic law circumstances in different countries. This analysis would be reflected in the MEMAP.

Follow-up work: see the work done on the MEMAP in section C (1) of this Report.

7. An analysis of country practices concerning the suspension of collection of tax during the MAP process would be made and an attempt to reach a consensus position that alternative methods of ensuring collection and otherwise protecting government interests could be developed. The

outcome of this work could be included in the MEMAP and, to the extent deemed appropriate, in the Commentary.

Follow-up work: see section B (4) of this Report as well as the work done on the MEMAP in section C (1) of this Report.

8. An analysis of country practices concerning the suspension or remission of interest and penalties during the MAP process would be made and an attempt to reach a consensus position as to whether and when the suspension of interest obligations and penalty payments is appropriate could be developed. The outcome of this work could be included in the MEMAP and, to the extent deemed appropriate, in the Commentary.

   Follow-up work: see section B (5) of this Report as well as the work done on the MEMAP in section C (1) of this Report.

9. An analysis of legal authority necessary to conclude and implement MAP agreements would be made and that analysis would be reflected in the MEMAP with the recommendation that all countries grant the CAs the necessary authority for the MAP process to operate effectively.

   Follow-up work: see the work done on the MEMAP in section C (1) of this Report.

10. The Commentary to Article 25 would be clarified to indicate the circumstances in which the MAP can be applicable in situations involving corresponding adjustments.

    Follow-up work: see section B (6) of this Report as well as the work done on the MEMAP in section C (1) of this Report.

11. Subsequent revisions to the Commentary to substantive treaty articles may point out that in some circumstances application of the appropriate interpretation may be able to avoid the necessity of recourse to MAP, whilst leaving open the possibility of still using MAP where this is not possible.

    No immediate follow-up work was required from the Committee.

12. Country issues concerning the relationship between domestic law and the MAP process would be analysed and addressed with a view to allowing the MAP to operate to the fullest extent possible, taking into account the possible constitutional and other legal limitations in the domestic legal systems. The outcomes of this work could be reflected in the MEMAP and/or in changes to the Articles of the Model Tax Convention or to the Commentary.

Follow-up work: see section B (7) of this Report as well as the work done on the MEMAP in section C (1) of this Report.

13. The MEMAP would contain a discussion of appropriate practices in structuring the CA function, stressing the issues of resource allocation and development of timeframes.

    Follow-up work: see work done on the MEMAP in section C (1) of this Report.

14. The MEMAP would contain a discussion of the role of the taxpayer in the MAP process with particular attention to the necessity of developing an open and transparent process.

    Follow-up work: see work done on the MEMAP in section C (1) of this Report.

15. The MEMAP would contain a discussion of appropriate practices in dealing with the MAP decision-making process, including the tension between the need to have an administrative solution to the case as quickly as possible and the desire to have consistent and principled decisions.

    Follow-up work: see work done on the MEMAP in section C (1) of this Report.

16. The Committee will develop a proposal examining the feasibility of implementing the mandatory submission (not mandatory resolution) of unresolved MAP cases to a form of supplementary dispute resolution mechanism in the light of the general international law obligation to apply and interpret the treaty in good faith. This could possibly involve amending paragraphs 26 and 46-48 of the Commentary to Article 25 to make explicit that the international law obligation of endeavouring in good faith to come to an agreement when applying the MAP process requires that, where agreement has not been possible under the normal MAP discussions, the unresolved issue(s) will be submitted to the appropriate form of supplemental dispute resolution procedure. Other implementation techniques might also be feasible, including changes or additions to the articles of the Model Tax Convention.

    To help implement the proposal for mandatory submission of unresolved issues to SDR, the Committee would outline the procedures which could be used for such submission including:

    - An evaluation of the various forms of SDR and the situations for which they would be suitable
    - The time frame or "triggering" device which would result in the required submission of the unresolved issue to SDR
    - The role of the taxpayer in the SDR process, including the agreement to the submission and the circumstances in which the taxpayer could be denied access to SDR

- The direct participation of the taxpayer in the SDR process
- The relation between the SDR process and the taxpayer's domestic law remedies
- The relation between the SDR decision and the MAP process generally
- The form and publication of the SDR decision
- The operational and procedural details for carrying out the SDR process

The procedures could be implemented by changes in the Commentary to Article 25 and/or the development of appropriate practices in the MEMAP.

Follow-up work: see section A of this Report.

17. The Committee will develop a proposal examining the feasibility of implementing the mandatory resolution of unresolved MAP for use only by countries that wished to provide for binding resolution of all cases. This would likely involve the development of the text of a new Model Convention Article and attendant Commentary or might take some other form.

    The work foreseen in the "resolution" proposal would involve guidance on the following issues:

    - The relation between the SDR decision and ongoing MAP process including the question of whether or not the SDR should be binding on governments and the taxpayer
    - Issues involved in implementing the SDR decision
    - The necessary modifications of the issues dealt with in the "submission" proposal to take into account that the resolution of the issue would in some fashion be binding

    Follow-up work: see section A of this Report.

2004 PROGRESS REPORT PROPOSALS FOR FUTURE STUDY

1. The possibility of developing some kind of analysis of the ongoing status of MAP cases in member countries would be explored, including the type of information that would be disclosed.

   Follow-up work: see section C (2) of this Report.

2. The desirability of providing a more articulated mechanism for "partial" double tax relief would be considered further and, if appropriate, changes to the Commentary to reflect these conclusions would be developed. Where partial relief is given, particular attention should be

paid to the relationship to Supplementary Dispute Resolution techniques.

Follow-up work: see section C (3) of this Report.

3. Country experiences in the areas of consistency, competitiveness and non-discrimination could be further analysed to see if it would be desirable to develop more guidance in the MEMAP and/or the Commentary to Article 25.

Follow-up work: see section C (4) of this Report.

4. The relationship between secondary adjustments and the MAP process could be reviewed with a view toward greater emphasis on the desirability, but not the requirement, that such issues be considered in the MAP process.

Follow-up work: see section C (5) of this Report.

5. The possibility of a more explicit and structured approach to the issues raised in connection with "triangular" cases could be undertaken, looking to suggestions for changes in the Commentary if agreement can be obtained on an appropriate approach and the possibility of developing a multilateral solution.

Follow-up work: see section C (6) of this Report.

6. The appropriate scope for paragraph 3 of Article 25 should be examined, in particular in connection with double taxation of branches of the same taxpayer, with a view to suggesting in the Commentary possible solutions to the problem.

Follow-up work: see section B (8) of this Report.

ANNEX 2

MAP PROGRAM STATISTICS FOR [2006] YEAR[1]

Country: _________________

If the reporting period does not correspond to the calendar year, please indicate the date when the reporting period ends: __________

Year MAP Case was Initiated	Opening Inventory on First Day of Year	Initiated During Year	Completed During Year	Ending Inventory on Last Day of Year	Closed or Withdrawn with Double Taxation During Year	Average Cycle Time for Cases Completed, Closed or Withdrawn During Year (in months)[1]
2000 or prior		–				
2001		–				
2002		–				
2003		–				
2004		–				
2005		–				
2006	–					
Total						

1. While countries are strongly encouraged to report average cycle times for their MAP cases, it is recognised that some countries may not consider reporting this information feasible or justified and may accordingly not include this information in their report.

DEFINITION OF TERMS USED IN REPORTING:[2]

Reporting Period: A reporting period is any 12-month period for which a competent authority prepares statistics relating to its Mutual Agreement Procedure (MAP) program. The reporting period for a specific calendar year is either that calendar year itself or any 12-month period ending during that calendar year, whichever best corresponds to the competent authority's recordkeeping practice. Thus, for example, the 2006 reporting period would be calendar year 2006 for a competent authority that maintains records on a calendar year basis, or would be the period from 1 October 2005 to 30 September 2006 for a competent authority that maintains records on the basis of a year ending on 30 September. To achieve maximum consistency in the data, countries are strongly encouraged to report on a calendar year basis, but use of a non-calendar year reporting period is acceptable if a country finds calendar year reporting too burdensome.

MAP Case: A case arising from a request made by a person pursuant to the MAP provisions of a tax convention. Cases within a competent authority's

inventory would generally include both: (i) cases arising from a request submitted directly to that competent authority by the taxpayer; and (ii) cases arising from a request submitted by the taxpayer to the competent authority of the treaty partner and subsequently presented by the latter competent authority to the former competent authority. These cases are typically requests to resolve situations where taxpayers are subject to taxation not in accordance with the provisions of a relevant tax convention, predominantly situations of double taxation. It could be a case arising from a request submitted under a provision based upon Article 25(1) of the OECD Model Tax Convention, or alternatively under Article 25(3), provided that in the latter case the request is taxpayer-specific and not one for a generic interpretation of the treaty. It could also include a case in which a request is made for a determination of a taxpayer's residence in dual resident situations of the type mentioned in Article 4(2)(d) of the OECD Model Tax Convention. A MAP case for this purpose is not considered to include a request for an Advance Pricing Arrangement (APA). Whilst a case may refer to a number of issues and taxation years, it should still be considered as only one case for statistical purposes as long as the issues are similar for all the years and are expected to be dealt with at the same time with a view to resolving all issues and years collectively. For that purpose, if, within three months from the reception of the first request, a competent authority receives a subsequent request by the same person with respect to a similar issue but for a different taxation year or with respect to the same taxation year for a different issue, that same request should be considered to be part of the first request.

Year Initiated: The year (*i.e.* the 12-month reporting period) in which a case is initiated, as defined below. Each reporting period is associated with the calendar year in which or with which the reporting period ends. Thus, for example, a case initiated on 1 November 2006 would be considered a case initiated in the 2006 year for a competent authority keeping statistics on a calendar year basis, but would be considered a case initiated in the 2007 year for a competent authority keeping statistics on the basis of a reporting period ending on 30 September 2006. The template suggests that the report for a given reporting period should include itemized information on the disposition of cases initiated during the 5 preceding reporting periods and aggregated information for any cases initiated during any older periods. Competent authorities who are not reasonably able to provide such itemized information for some or all of the cases initiated before their first period of reporting may provide the information on an aggregated basis.

Opening Inventory: The number of pending MAP cases in a competent authority's inventory that are not completed, closed, or withdrawn (as defined below) as of the beginning of a reporting period. The opening inventory will equal the ending inventory of the previous year. These pending cases include

cases where a resolution has been reached but the taxpayer has yet to officially agree to the resolution. The opening inventory by definition will not include any cases initiated during the reporting period.

Initiated Case: An "initiated" case is one that has been accepted by a competent authority. In most cases, competent authorities will accept a person's request for competent authority assistance via MAP on the date the request is considered complete, and this is commonly evidenced by a notification from the competent authority to the person that the request has been accepted. A "complete request" is one where there is sufficient information included to allow the competent authority to decide whether the objection underlying the case appears to be justified. For this purpose, a merely "protective" competent authority filing (*i.e.* one which is made before the expiration of a time limit on making a competent authority request, but which does not contain enough information to allow the competent authority to decide whether the objection underlying the case appears to be justified) should not be considered an "initiated" case. A case which is presented to a competent authority by the competent authority of another State (pursuant to a request submitted to the latter competent authority) would typically be considered "initiated" for purposes of the former competent authority's statistics when the former competent authority receives that presentation, unless the former competent authority promptly thereafter notifies the latter competent authority that the request is incomplete or is otherwise not accepted for MAP discussions. By definition this column will include only cases initiated during the current reporting period.

Completed Case: A case that has been resolved, whether by mutual agreement (including pursuant to arbitration) or by unilateral action on the part of the competent authority, where taxation not in accordance with a convention (including double taxation) has been alleviated in whole or in part. Generally, a case is completed on the date the taxpayer has officially accepted the resolution. At this point, the only remaining action by the tax administration should be the processing of the result of the resolution, which should be accomplished fairly promptly (*e.g.* within 30 days).

Ending Inventory: The number of pending MAP cases in a competent authority's inventory that are not completed, closed or withdrawn (as defined below) as of the end of a reporting period. The ending inventory will equal the opening inventory for the next year.

Closed or Withdrawn Case with Double Taxation: This column should include information on any case that has been closed by a tax administration (where there is no further recourse within the MAP provision of the relevant convention) or withdrawn by a taxpayer under circumstances where the taxation not in accordance with the convention (including double taxation)

has not been alleviated. The case is considered closed by the tax administrations on the date they have provided written notification to the taxpayer that they cannot and will not be able to reach a resolution and there is no further recourse (such as arbitration) available within MAP. Countries have the option to determine how they wish to report on such cases (*e.g.* the number of such cases or issues closed or withdrawn with double taxation, the monetary amounts of unrelieved double taxation in such cases, the percentage amounts of unrelieved double taxation in such cases, etc.), but they should report on a consistent basis from year to year and should explain the basis on which they are reporting.

Average Cycle Time: The average time to complete a MAP case. This average shall be calculated by first aggregating the number of months it took to complete or close each case (including any withdrawn case) that was completed, closed or withdrawn during the reporting period, from the date of initiation until the date of completion, closure or withdrawal. The second step is to divide this aggregated number of months by the total number of such completed, closed, and withdrawn cases. The result is the average cycle time of a MAP case in months, or in other words, the average number of months to complete a MAP case.

Notes

1. Countries may wish to provide a footnoted explanation of any aberrational figures reported in this table, particularly if that would help to maintain taxpayers' confidence in the MAP process. Also, countries may aggregate information for two or more years if the number of cases for a given year is so small as to risk providing a clue as to the identity of the taxpayers involved.
2. Adhering to these definitions will improve the accuracy and consistency of the data reported. In the exceptional case where a tax administration does not accept a definition or is unable to report based upon the definition, that administration is requested to provide a footnote explaining the difference between its reporting standard and the definition.

Application and Interpretation of Article 24 (Non-Discrimination)

(adopted by the OECD Committee on Fiscal Affairs on 20 June 2008)

ANNEX. Issues that require a more fundamental analysis of the issue of non-discrimination and taxation . . . . . R(22)-36

INTRODUCTION

1. The prevention of discriminatory taxation is an important role of tax conventions. Tax conventions, however, recognise that residents and non-residents are in a different situation and must often be treated differently for tax purposes. For this reason, the principle of non-discrimination has been carefully incorporated in tax conventions through a set a provisions that are found in Article 24 of the OECD Model Tax Convention.

2. The differences and complexity of modern legal arrangements and tax systems sometimes mean, however, that it is unclear whether a distinction made by a country for tax purposes constitutes a form of discrimination that violates the provisions of Article 24 or a legitimate distinction that is not contrary to these provisions.

3. This has led the OECD Committee on Fiscal Affairs to examine the interpretation and application of Article 24 with a view to providing greater guidance in this area. A first version of this Report was released as a discussion draft in May 2007. This Report reflects the final conclusions reached by the Committee after examination of these comments.

4. This Report deals exclusively with issues related to the interpretation and application of the current provisions of Article 24. For each issue examined by the Committee, the Report includes a brief description of the issue, the conclusion reached by the Committee and, where relevant, the changes to the Commentary adopted by the Committee.

5. In the course of its work, the Committee recognized that some issues, including primarily those listed in the Annex, require a more fundamental analysis of the issue of non-discrimination and taxation which could lead to changes to Article 24. It was agreed that such work would benefit from the input of experts with a different background and should constitute a subsequent project.

A. GENERAL ISSUES

A-1 General comments on the principles underlying Article 24

Description of the issue

6. It has been suggested that preliminary remarks should be included in the Commentary on Article 24 to reflect some basic principles that should guide the interpretation of the various paragraphs of the Article. Such remarks could cover the following areas:

- *Comparability*: although the wording of the various provisions of Article 24 differs, a common theme is that discrimination can only

arise when all factors are equal and the different treatment is solely based on the difference that is prohibited by the relevant provision. A different treatment does not automatically result in a violation of these provisions.

- *No better treatment required*: to what extent can the provisions of Article 24 be used to justify a treatment that is better than that of a national or resident?
- *Relationship with other Articles of the Convention:* clearly, what is expressly mandated or authorized by other provisions of the Convention cannot constitute a violation of the provisions of Article 24.
- *Covert or indirect discrimination*: the question has been asked whether and to what extent the non-discrimination provisions of Article 24 can be interpreted to cover not only "overt" discrimination (*i.e.* a case where the relevant tax measure clearly distinguishes the two categories of taxpayers compared in the relevant provision, such as a tax measure that would treat nationals and non-nationals differently), but also "covert" discrimination (*i.e.* a case where the relevant tax measure does not directly distinguish between the two categories of taxpayers compared in the relevant provision but may have that indirect effect, such as a measure that, in practice, applies almost exclusively to non-nationals)? In other words, do the provisions of Article 24 cover "indirect" discrimination, *e.g.* cases where it may be considered impossible for a foreign taxpayer to meet the conditions for a specific tax treatment although the wording of the provision itself does not exclude foreign taxpayers? The issue would be relevant, for example, where a thin capitalisation rule does not expressly deny the deduction of interest paid to non-residents (so as to potentially contravene paragraph 4 of Article 24) but does so with respect to interest paid to taxpayers who are not subject to the most comprehensive tax liability, which is typically the case of non-residents as opposed to residents.
- *The provisions of Article 24 do not address all forms of possible discrimination:* the provisions of Article 24 cover certain specific situations. Apart from these specific cases, different or less favourable treatment is possible. The broader rules against discrimination that are found in other types of conventions have therefore little relevance for purposes of the application and interpretation of Article 24.
- *Most-favoured-nation principle and reciprocity:* the provisions of Article 24 do not seek to ensure so-called "most-favoured-nation" treatment. It has been suggested that this could be recognized in the Commentary,

possibly by referring to a principle of reciprocity that would, for example, prevent the extension of favourable treatment deriving from a regional agreement to which one of the Contracting States, but not the other, is a member.

Conclusions reached by the Committee

7. The Committee agreed that it would be useful to clarify, in an introduction to the Commentary on Article 24, that under the various provisions of the Article, discrimination can only arise when all factors are equal and the different treatment is solely based on the difference that is prohibited by the relevant provision. It also agreed that this introduction should provide that Article 24 does not seek to ensure most-favoured-nation treatment and is not intended to provide foreign nationals or non-residents with a tax treatment that is better than that of nationals or resident enterprises. Finally, it could also be usefully clarified that what is expressly mandated or authorised by other provisions of the Convention cannot constitute a violation of the provisions of Article 24.

8. The Committee also agreed that Article 24 does not cover covert or indirect discrimination. The non-discrimination provisions of Article 24 are precisely drafted and do not introduce an all-encompassing non-discrimination rule (see, for instance, the wording of paragraph 1, which recognizes that residents and non-residents are not in comparable circumstances).

9. It was agreed that this should be explicitly stated in the Commentary without suggesting that States are allowed to deliberately circumvent the provisions of Article 24 by disguising what is really discrimination.

10. Based on these conclusions, the Committee agreed on the following changes to the Commentary on Article 24.

Changes to the Commentary

11. *Renumber the existing paragraph 1 as paragraph 1.4 and add the following paragraphs 1 to 1.3 immediately before it (additions to the existing text of the Commentary are in* ***bold italics****):*

General remarks

1. This Article deals with the elimination of tax discrimination in certain precise circumstances. All tax systems incorporate legitimate distinctions based, for example, on differences in liability to tax or ability to pay. The non-discrimination provisions of the Article seek to balance the need to prevent unjustified discrimination with the need to take account of these legitimate distinctions. For that reason, the Article should not be unduly

extended to cover so-called "indirect" discrimination. For example, whilst paragraph 1, which deals with discrimination on the basis of nationality, would prevent a different treatment that is really a disguised form of discrimination based on nationality such as a different treatment of individuals based on whether or not they hold, or are entitled to, a passport issued by the State, it could not be argued that non-residents of a given State include primarily persons who are not nationals of that State to conclude that a different treatment based on residence is indirectly a discrimination based on nationality for purposes of that paragraph.

1.1 Likewise, the provisions of the Article cannot be interpreted as to require most-favoured-nation treatment. Where a State has concluded a bilateral or multilateral agreement which affords tax benefits to nationals or residents of the other Contracting State(s) party to that agreement, nationals or residents of a third State that is not a Contracting State of the treaty may not claim these benefits by reason of a similar non-discrimination provision in the double taxation convention between the third State and the first-mentioned State. As tax conventions are based on the principle of reciprocity, a tax treatment that is granted by one Contracting State under a bilateral or multilateral agreement to a resident or national of another Contracting State party to that agreement by reason of the specific economic relationship between those Contracting States may not be extended to a resident or national of a third State under the non-discrimination provision of the tax convention between the first State and the third State.

1.2 The various provisions of Article 24 prevent differences in tax treatment that are solely based on certain specific grounds (e.g. nationality, in the case of paragraph 1). Thus, for these paragraphs to apply, other relevant aspects must be the same. The various provisions of Article 24 use different wording to achieve that result (e.g. "in the same circumstances" in paragraphs 1 and 2; "carrying on the same activities" in paragraph 3; "similar enterprises" in paragraph 5). Also, whilst the Article seeks to eliminate distinctions that are solely based on certain grounds, it is not intended to provide foreign nationals, non-residents, enterprises of other States or domestic enterprises owned or controlled by non-residents with a tax treatment that is better than that of nationals, residents or domestic enterprises owned or controlled by residents (see, for example, paragraph 20 below).

1.3 Finally, as illustrated by paragraph 58 below, the provisions of the Article must be read in the context of the other Articles of the Convention so that measures that are mandated or expressly authorized by the provisions of these Articles cannot be considered to violate the provisions of the Article even if they only apply, for example, as regards payments to non-residents.

Conversely, however, the fact that a particular measure does not constitute a violation of the provisions of the Article does not mean that it is authorized by the Convention since that measure could violate other Articles of the Convention.

Paragraph 1

1.4 This paragraph establishes the principle that for purposes of taxation discrimination on the grounds of nationality is forbidden, and that, subject to reciprocity, the nationals of a Contracting State may not be less favourably treated in the other Contracting State than nationals of the latter State in the same circumstances.

A-2 Provisions applicable to groups of companies

Description of the issue

12. It has been argued that the current wording of paragraphs 1, 3 and 5 of Article 24 could have the effect of requiring a State to extend the provisions of its domestic law that apply to a group of companies (*e.g.* group relief of losses, consolidation, tax-free transfers between companies of the same group) to cover companies of the group which are not residents of that State.

13. In the context of paragraph 1, comments received from the Business and Industry Advisory Committee to the OECD (BIAC) drew attention to a case where head office expenses, *e.g.* those of a general and administrative nature incurred for the benefit of a multinational group, are charged on a pro-rata basis among the global affiliates in the group. Country X does not accept such charges as deductible by the local X group affiliate where the expense is incurred abroad and is charged by a non-local entity to the local group member. BIAC suggests that this is a clear case of discrimination, where the pro-rated expenses would be deductible if the expenses were incurred locally and charged through a local entity. The application of paragraph 1 to companies, especially in the case of double residence, is obviously relevant in this case. This has led to the question whether, based on the earlier conclusions on the scope of paragraph 1, this paragraph has limited application to regimes applicable to groups of related companies.

14. As regards paragraph 3, the question has been raised in publications whether paragraph 3 may generally require extending the benefits of regimes applicable to groups of related companies to the foreign activities of the enterprise that owns the permanent establishment. Tax experts have suggested restricting consolidation to the territory of each State involved. BIAC has pointed out that the use of group (consolidated) taxation concepts have substantially expanded around the world and that in the light of the current work within the OECD on attribution of profits to a permanent

establishment, which, under the "authorised OECD approach" seeks to treat a permanent establishment as a separate enterprise, it would follow that a host country's permanent establishment should be permitted to join with other affiliated host country entities in whatever group relief is available in the host country.

15. In the context of paragraph 5, it has been argued that the current wording of that paragraph requires a State to extend its domestic law provisions for groups of companies to a group of companies that includes companies not deriving their status as such from the laws in force in that State. This issue covers national provisions for groups of companies which allow consolidation or the transfer of losses, the treatment of inter-company dividends, and tax-free transfers. If the general answer should be "yes", a closer look at the extent of such a requirement would be necessary. For example, group consolidation might not be required at all under Article 24, might be required cross-border, or might be restricted to the territory of each State involved (*e.g.*, if the parent company is in State A and two daughters in State B, consolidation between the two daughters, but not between these companies and the parent company, could be possible).

16. These questions are linked to the meaning of the term "similar enterprises" in paragraph 5. Contrary to paragraph 1, paragraph 5 does not explicitly require that the enterprises must be in the same circumstances. However, the term "similar enterprises" might imply that they should be comparable and that this is not always the case. The term "similar enterprises" might suggest that paragraph 5 is dealing with companies as separate entities only and that as far as transactions between the subsidiary and the parent are concerned, the subsidiary of a domestic parent might not be a similar enterprise. Also, the question has been raised whether or not an enterprise is "similar" if the foreign parent company is not necessarily subject to national taxes on a worldwide basis.

Conclusions reached by the Committee

17. The Committee agreed to clarify the effect of the limited scope of paragraph 1 to regimes applicable to groups of related companies by including an example into the Commentary. This would sufficiently deal with this issue taking into account the further changes to the Commentary in respect of paragraph 1. Paragraph 1 may still be applicable to resident companies subject to unlimited taxation who are simply not incorporated in that State.

18. The Committee agreed to explain in the Commentary that paragraph 3 does not require any extension of domestic regimes for group companies which are restricted to resident companies. The reason for that conclusion is that paragraph 3 only relates to the taxation on the permanent establishment

itself, which excludes its application to rules that relate to groups of related companies. As a result, paragraph 3 would neither oblige States to extend domestic group taxation regimes to permanent establishments of foreign companies or domestic companies with a foreign head, nor would it oblige States to take into account losses of a foreign permanent establishment of a domestic company. Paragraph 3 should not give an inappropriate advantage to foreign entities (*i.e.* it would be inappropriate to allow consolidation of the profits of a permanent establishment, which are taxable in the State where the permanent establishment is located, with the profits of its head office or of a sister non-resident company, which are not taxable in that State).

19. As regards paragraph 5, the Committee agreed that the new proposed Commentary should clarify that the paragraph is similarly limited to the taxation of the enterprise itself and generally excludes issues related to the taxation of the group to which the enterprise belongs. Therefore, no consolidation of two subsidiaries of a foreign parent would be required under paragraph 5.

20. Based on these conclusions, the Committee decided to make the following changes to the Commentary.

Changes to the Commentary

As regards paragraph 1

21. *Add the following new paragraphs 11.8 and 11.9 to the Commentary on Article 24 (the preceding proposed paragraphs 11.1 to 11. 7 relate to Issue B-1 below)*:

> *[11.3 The following additional examples illustrate these principles:]*
>
> *[…]*
>
> ***11.8 Example 5: Under the domestic income tax law of State A, companies incorporated in that State or which have their place of effective management in that State are residents of the State and companies that do not meet one of these two conditions are non-residents. Under the domestic income tax law of State B, companies incorporated in that State are residents of that State. The State A-State B tax convention is identical to this Model Tax Convention except that paragraph 3 of Article 4 provides that if a legal person is a resident of both States under paragraph 1 of that Article, that legal person shall be deemed to be a resident only of the State in which it has been incorporated. The domestic tax law of State A further provides that companies that have been incorporated and that have their place of effective management in that State are entitled to consolidate their income for tax purposes if they are part of a group of companies that have common shareholders. Company X, which was incorporated in State B, belongs to the same group as two companies incorporated in State A and all these***

R (22)

companies are effectively managed in State A. Since it was not incorporated in State A, company X is not allowed to consolidate its income with that of the two other companies.

11.9 In that case, even if company X is a resident of State A under the domestic law of that State, it is not a resident of State A for purposes of the Convention by virtue of paragraph 3 of Article 4. It will therefore not be in the same circumstances as the other companies of the group as regards residence and paragraph 1 will not allow it to obtain the benefits of consolidation even if the different treatment results from the fact that company X has not been incorporated in State A. The residence of company X is clearly relevant with respect to the benefits of consolidation since certain provisions of the Convention, such as Articles 7 and 10, would prevent State A from taxing certain types of income derived by company X.

As regards paragraph 3

22. *Add the following new paragraph 24.1 to the Commentary on Article 24 (changes to the existing text of the Commentary appear in* ***bold italics****):*

[24. With regard to the basis of assessment of tax, the principle of equal treatment normally has the following implications:

[…]

c) Permanent establishments should also have the option that is available in most countries to resident enterprises of carrying forward or backward a loss brought out at the close of an accounting period within a certain period of time (*e.g.* 5 years). It is hardly necessary to specify that in the case of permanent establishments it is the loss on their own business activities, as shown in the separate accounts for these activities, which will qualify for such carry-forward.

d) Permanent establishments should further have the same rules applied to resident enterprises, with regard to the taxation of capital gains realised on the alienation of assets, whether during or on the cessation of business.]

24.1 As clearly stated in subparagraph c) above, the equal treatment principle of paragraph 3 only applies to the taxation of the permanent establishment's own activities. That principle, therefore, is restricted to a comparison between the rules governing the taxation of the permanent establishment's own activities and those applicable to similar business activities carried on by an independent resident enterprise. It does not extend to rules that take account of the relationship between an enterprise and other enterprises (e.g. rules that allow consolidation, transfer of losses or tax-free transfers of property between companies under common

R (22)

ownership) since the latter rules do not focus on the taxation of an enterprise's own business activities similar to those of the permanent establishment but, instead, on the taxation of a resident enterprise as part of a group of associated enterprises. Such rules will often operate to ensure or facilitate tax compliance and administration within a domestic group. It therefore follows that the equal treatment principle has no application. For the same reasons, rules related to the distribution of the profits of a resident enterprise cannot be extended to a permanent establishment under paragraph 3 as they do not relate to the business activities of the permanent establishment (see paragraph 40 below).

As regards paragraph 5

23. *Add the following new paragraphs 57.1 and 57.2 to the Commentary on Article 24:*

57.1 Since the paragraph relates only to the taxation of resident enterprises and not to that of the persons owning or controlling their capital, it follows that it cannot be interpreted to extend the benefits of rules that take account of the relationship between a resident enterprise and other resident enterprises (e.g. rules that allow consolidation, transfer of losses or tax-free transfer of property between companies under common ownership). For example, if the domestic tax law of one State allows a resident company to consolidate its income with that of a resident parent company, paragraph 5 cannot have the effect to force the State to allow such consolidation between a resident company and a non-resident parent company. This would require comparing the combined treatment of a resident enterprise and the non-resident that owns its capital with that of a resident enterprise of the same State and the resident that owns its capital, something that clearly goes beyond the taxation of the resident enterprise alone.

57.2 Also, because paragraph 5 is aimed at ensuring that all resident companies are treated equally regardless of who owns or control their capital and does not seek to ensure that distributions to residents and non-residents are treated in the same way (see paragraph 57 above), it follows that withholding tax obligations that are imposed on a resident company with respect to dividends paid to non-resident shareholders but not with respect to dividends paid to resident shareholders cannot be considered to violate paragraph 5. In that case, the different treatment is not dependent on the fact that the capital of the company is owned or controlled by non-residents but, rather, on the fact that dividends paid to non-residents are taxed differently. A similar example would be that of a State that levies a tax on resident companies that make distributions to their shareholders

regardless of whether or not they are residents or non-residents, but which, in order to avoid a multiple application of that tax, would not apply it to distributions made to related resident companies that are themselves subject to the tax upon their own distributions. The fact that the latter exemption would not apply to distributions to non-resident companies should not be considered to violate paragraph 5. In that case, it is not because the capital of the resident company is owned or controlled by non-residents that it is treated differently; it is because it makes distributions to companies that, under the provisions of the treaty, cannot be subjected to the same tax when they re-distribute the dividends received from that resident company. In this example, all resident companies are treated the same way regardless of who owns or controls their capital and the different treatment is restricted to cases where distributions are made in circumstances where the distribution tax could be avoided.

A-3 Discrimination against one taxpayer or a class of taxpayers?

Description of the issue

24. The test for discrimination can theoretically be applied at the level of the individual taxpayer who is adversely affected or at the level of his class of taxpayers as a whole. In other words, is it possible to consider that a tax measure does not violate a non-discrimination provision if one particular taxpayer is treated less favourably but other taxpayers in the same group enjoy advantages from that measure?

Conclusions reached by the Committee

25. The Committee agreed that the correct interpretation of the provisions of Article 24 is that the comparison should be at the level of the individual taxpayer and not at the level of the class of taxpayers to whom the taxpayer belongs. It did not consider, however, that changes to the Commentary were needed to clarify that this was the correct interpretation of the provisions of the Article.

B. ISSUES RELATED TO PARAGRAPH 1

B-1 Application of paragraph 1 to companies

Description of the issue

26. Paragraph 1 of Article 24 prevents discrimination based on nationality but only with respect to companies "in the same circumstances, in particular with respect to residence". Under the domestic law of many countries,

incorporation or registration constitutes the criterion, or one of the criteria, to determine the residence of companies for the purposes of Article 4. Under the definition of the term "national" in subparagraph *f*) of paragraph 1 of Article 3, however, registration or incorporation will also be the criterion to determine the "nationality" of a company (since a company will usually "derive[e] its status as such from the laws in force" in the State in which it has been incorporated or registered). It is therefore unclear how the residence of a company can be distinguished from its nationality for the purposes of paragraph 1 of Article 24.

27. This concern has led some States to question whether paragraph 1 should apply to companies. Paragraph 11 of the Commentary on Article 24 explains that "it seems justifiable not to deal with legal persons, partnerships and associations in a special provision, but to assimilate them with individuals under paragraph 1" (this result is achieved through the definition of "national"). Some States, however, consider that the other provisions of Article 24 may be sufficient to deal with the discriminatory treatment of companies and that it may be better not to apply paragraph 1 to companies given the risk that paragraph 1 be interpreted so as to prevent different treatment of resident and non-resident companies, a result which would be clearly unintended given that such a distinction is a crucial feature of most tax systems (see, for example, the reservation by France in paragraph 66 of the Commentary on Article 24).

Conclusions of the Committee

28. The Committee agreed that the Commentary should be amended to clarify that resident and non-resident companies are not in the same circumstances for purposes of paragraph 1, except where residence is totally irrelevant for purposes of the provision or administrative measure under consideration. The Committee agreed that the different treatment of resident and non-resident companies is allowed by paragraph 1 even where residence and nationality are linked through the criterion of incorporation or registration. Paragraph 1 only prohibits a different tax treatment that is based exclusively on the fact that the entity derives its status from the domestic law of another State and requires that all other relevant factors, including the residence of the entity, be the same. The different treatment of residents and non-residents is a crucial feature of tax systems (*e.g.* source based and worldwide taxation are not comparable and withholding taxes that often apply only to payments to non-residents are implicitly allowed under provisions such as Articles 10 and 11); paragraph 1 was never intended to prevent such different treatment. The Committee agreed that a few examples should be included in the Commentary to illustrate these conclusions.

Changes to the Commentary

29. *Replace the existing paragraph 11 of the Commentary on Article 24 by the following (changes to the existing text appear in* ***bold italics*** *for additions and* ~~*strikethrough*~~ *for deletions):*

11. In view of the legal relationship created between the company and the State under whose law it is constituted, which from certain points of view is closely akin to the relationship of nationality in the case of individuals, it seems justifiable not to deal with legal persons, partnerships and associations in a special provision, but to assimilate them with individuals under paragraph 1. This result is achieved through the definition of the term "national" in subparagraph ~~*f)*~~ ***g)*** of paragraph 1 of Article 3.

11.1 By virtue of that definition, in the case of a legal person such as a company, "national of a Contracting State" means a legal person "deriving its status as such from the laws in force in that Contracting State". A company will usually derive its status as such from the laws in force in the State in which it has been incorporated or registered. Under the domestic law of many countries, however, incorporation or registration constitutes the criterion, or one of the criteria, to determine the residence of companies for the purposes of Article 4. Since paragraph 1 of Article 24 prevents different treatment based on nationality but only with respect to persons or entities "in the same circumstances, in particular with respect to residence", it is therefore important to distinguish, for purposes of that paragraph, a different treatment that is solely based on nationality from a different treatment that relates to other circumstances and, in particular, residence. As explained in paragraphs 3 and 4 above, paragraph 1 only prohibits discrimination based on a different nationality and requires that all other relevant factors, including the residence of the entity, be the same. The different treatment of residents and non-residents is a crucial feature of domestic tax systems and of tax treaties; when Article 24 is read in the context of the other Articles of the Convention, most of which provide for a different treatment of residents and non-residents, it is clear that two companies that are not residents of the same State for purposes of the Convention (under the rules of Article 4) are usually not in the same circumstances for purposes of paragraph 1.

11.2 Whilst residents and non-residents are usually not in the same circumstances for the purposes of paragraph 1, it is clear, however, that this is not the case where residence has no relevance whatsoever with respect to the different treatment under consideration.

11.3 The following examples illustrate these principles.

11.4 Example 1: Under the domestic income tax law of State A, companies incorporated in that State or having their place of effective management in that State are residents thereof. The State A-State B tax convention is identical to this Model Tax Convention. The domestic tax law of State A provides that dividends paid to a company incorporated in that country by another company incorporated in that country are exempt from tax. Since a company incorporated in State B that would have its place of effective management in State A would be a resident of State A for purposes of the State A - State B Convention, the fact that dividends paid to such a company by a company incorporated in State A would not be eligible for this exemption, even though the recipient company is in the same circumstances as a company incorporated in State A with respect to its residence, would constitute a breach of paragraph 1 absent other relevant different circumstances.

11.5 Example 2: Under the domestic income tax law of State A, companies incorporated in that State are residents thereof and companies incorporated abroad are non-residents. The State A-State B tax convention is identical to this Model Tax Convention except that paragraph 3 of Article 4 provides that if a legal person is a resident of both States under paragraph 1 of that Article, that legal person shall be deemed to be a resident of the State in which it has been incorporated. The domestic tax law of State A provides that dividends paid to a company incorporated in that country by another company incorporated in that country are exempt from tax. Paragraph 1 does not extend that treatment to dividends paid to a company incorporated in State B. Even if a company incorporated in State A and a company incorporated in State B that receive such dividends are treated differently, these companies are not in the same circumstances with regards to their residence and residence is a relevant factor in this case (as can be concluded, for example, from paragraph 5 of Article 10, which would prevent the subsequent taxation of dividends paid by a non-resident company but not those paid by a resident company).

11.6 Example 3: Under the domestic income tax law of State A, companies that are incorporated in that State are residents thereof. Under the domestic tax law of State B, companies that have their place of effective management in that State are residents thereof. The State A-State B tax convention is identical to this Model Tax Convention. The domestic tax law of State A provides that a non-resident company that is a resident of a State with which State A does not have a tax treaty that allows for the exchange of tax information is subject to an annual tax equal to 3% of the value of its immovable property instead of a tax on the net income derived from that property. A company incorporated in State B but which is a resident of a State with which State A does not have a tax treaty that allows for the

exchange of tax information cannot claim that paragraph 1 prevents the application of the 3% tax levied by State A because it is treated differently from a company incorporated in State A. In that case, such a company would not be in the same circumstances, with respect to its residence, as a company incorporated in State A and the residence of the company would be relevant (e.g. for purposes of accessing the information necessary to verify the net income from immovable property derived by a non-resident taxpayer).

11.7 Example 4: Under the domestic income tax law of State A, companies incorporated in that State are residents of State A and companies incorporated abroad are non-residents. The State A-State B tax convention is identical to this Model Tax Convention except that paragraph 3 of Article 4 provides that if a legal person is a resident of both States under paragraph 1 of that Article, that legal person shall be deemed to be a resident of the State in which it has been incorporated. Under State A's payroll tax law, all companies that employ resident employees are subject to a payroll tax that does not make any distinction based on the residence of the employer but that provides that only companies incorporated in State A shall benefit from a lower rate of payroll tax. In that case, the fact that a company incorporated in State B will not have the same residence as a company incorporated in State A for the purposes of the A-B convention has no relevance at all with respect to the different tax different under the payroll tax and that different treatment would therefore be in violation of paragraph 1 absent other relevant different circumstances.

B-2 Interpretation of the term "in the same circumstances"

Description of the issue

30. There is some uncertainty as to what are the relevant factors in determining whether taxpayers are in the same circumstances for the purposes of paragraph 1. Paragraphs 3 to 8 of the Commentary on Article 24 provide that the phrase refers to taxpayers who are placed, from the point of view of the application of the ordinary taxation laws and regulations, in "substantially similar circumstances" both in law and in fact. The term "substantially" is somewhat unclear, although paragraph 1 provides expressly that a resident and a non-resident are not in the same circumstances.

Conclusions reached by the Committee

31. The Committee noted that changes made under other issues would provide some clarification on the meaning of the phrase "in the same circumstances". It agreed, however, to clarify that taxpayers with limited tax

liability are usually not in the same circumstances as taxpayers with unlimited tax liability.

32. Based on this conclusion, the Committee decided to make the following change to the Commentary.

Change to the Commentary

33. *Add the following new paragraph 4.1 to the Commentary on Article 24:*

> ***4.1 The expression "in the same circumstances" can in some cases refer to a person's tax situation. This would be the case, for example, where a country would subject its nationals, or some of them, to a more comprehensive tax liability than non-nationals (this, for example, is a feature of the United States tax system). As long as such treatment is not itself a violation of paragraph 1, it could not be argued that persons who are not nationals of that State are in the same circumstances as its nationals for the purposes of the application of the other provisions of the domestic tax law of that State with respect to which the comprehensive or limited liability to tax of a taxpayer would be relevant (e.g. the granting of personal allowances).***

B-3 National treatment versus most-favoured-nation

Description of the issue

34. The question has arisen whether paragraph 1 could allow a national of one Contracting State to obtain benefits granted by the other Contracting State to nationals of third States, for example in the context of regional agreements.

Conclusions reached by the Committee

35. The Committee agreed that the wording of paragraph 1 was clearly restricted to national treatment so that it was impossible to argue that the tax treatment, in one Contracting State, of a national of the other Contracting State should not be other or more burdensome than the taxation of nationals of third States in the same circumstances to which benefits may have been granted by reason of their nationality, *e.g.* through regional agreements. Thus, a resident and national of State A could not argue that paragraph 1 of Article 24 of the State A-State B treaty requires State B to treat him, for tax purposes, in the same way as another resident of State A who is a national of State C.

C. ISSUES RELATED TO PARAGRAPH 3

C-1 Structure and rate of tax for purposes of paragraph 3

Description of the issue

36. Paragraph 36 of the Commentary on Article 24 states that in countries "where enterprises, mainly companies, are charged a tax on their profits which is specific to them, the provisions of paragraph 3 raise, with regard to the rate applicable in the case of permanent establishments, especially difficult and delicate problems." Also, in paragraphs 40 to 43, the Commentary describes the impact of paragraph 3 on a split-rate system and on an imputation system ("avoir fiscal" or "tax credit") and leaves the solution to these problems to bilateral negotiations.

37. The Commentary's description and discussion of the different problems related to the structure and rate of tax should, as a minimum, be updated (*e.g.* BIAC pointed out that the use of split-rate and imputation systems is in decline). More importantly, however, the issue arises as to whether the reference in paragraph 3 to "taxation on the permanent establishment" extends to the treatment of the enterprise to which the permanent establishment belongs as regards the repatriation or deemed distribution of the profits of the permanent establishment.

Conclusions reached by the Committee

38. The Committee agreed to clarify the scope of paragraph 3 of Article 24. The thrust of that clarification is that issues related to various systems for the integration of the corporate and shareholder's taxes are outside the scope of paragraph 3 because paragraph 3 is restricted to the taxation of the profits from the activities of the permanent establishment itself and not to the taxation of the enterprise as a whole. This reflects the Committee's conclusion that even though paragraph 3 does not use the words "in the same circumstances", the phrase "taxation on a permanent establishment" and the reference to "enterprises, carrying on the same activities" effectively restrict the scope of the paragraph. Since a permanent establishment, by its very nature, does not distribute dividends, the tax treatment of distributions is therefore outside the scope of paragraph 3, *i.e.* paragraph 3 deals with the realisation of profits and not with the decisions of the company and its shareholders after the realisation of profits concerning, for example, the distribution of these profits. That approach finds support in the second sentence of paragraph 3 which confirms that tax aspects related to the taxpayer that owns the permanent establishment, such as personal allowances and deductions, are outside the scope of the paragraph.

39. This led the Committee to discuss the issue of branch taxation. Branch taxation raises a paragraph 3 issue to the extent that it results in a higher rate of tax being applied to the profits of the permanent establishment than to those of a local enterprise. The Committee concluded that a branch tax that is simply imposed as a supplementary rate applicable to the profits of a permanent establishment would indeed constitute a violation of paragraph 3. The Committee, however, distinguished such a tax from a tax that would be imposed on amounts deducted as interest in computing the profits of a permanent establishment (*e.g.* "branch level interest tax"). In that case, the tax would not be levied on the permanent establishment itself but, instead, on the enterprise to which the interest is considered to be paid and would therefore be outside the scope of paragraph 3.

40. The Committee also agreed to clarify that, for purposes of paragraph 3, the permanent establishment of a foreign enterprise should be compared with a local enterprise that has a similar legal structure as that of the foreign enterprise (*e.g.* a permanent establishment of a sole proprietorship should not be compared to a domestic company).

41. Based on these conclusions, the Committee decided to make the following changes to the Commentary.

Changes to the Commentary

42. *Add the following new paragraph 22.1 to the Commentary on Article 24:*

> ***22.1 It is also clear that, for purposes of paragraph 3, the tax treatment in one Contracting State of the permanent establishment of an enterprise of the other Contracting State should be compared to that of an enterprise of the first-mentioned State that has a legal structure that is similar to that of the enterprise to which the permanent establishment belongs. Thus, for example, paragraph 3 does not require a State to apply to the profits of the permanent establishment of an enterprise carried on by a non-resident individual the same rate of tax as is applicable to an enterprise of that State that is carried on by a resident company.***

R (22)

43. *Replace the existing paragraph 36 of the Commentary on Article 24 by the following (changes to the existing text appear in* ***bold italics*** *for additions and* ~~*strikethrough*~~ *for deletions):*

> 36. In countries where enterprises, mainly companies, are charged a tax on their profits which is specific to them, the provisions of paragraph 3 raise, with regard to the rate applicable in the case of permanent establishments, ~~especially difficult and delicate problems, which here too arise from the fact that~~ ***some specific issues related to the fact that*** the permanent establishment is only a part of a legal entity which is not

under the jurisdiction of the State where the permanent establishment is situated.

44. *Replace the existing paragraphs 40-43 of the Commentary on Article 24 by the following (changes to the existing text appear in* ***bold italics*** *for additions and* ~~*strikethrough*~~ *for deletions):*

~~40. As regards the split-rate system of company tax, it should first be pointed out as being a fact central to the issue here that most OECD member countries which have adopted this system do not consider themselves bound by the provisions of paragraph 3 to extend it to permanent establishments of non-resident companies. This attitude is based, in particular, on the view that the split-rate is only one element amongst others (in particular a withholding tax on distributed income) in a system of taxing company profits and dividends which must be considered as a whole and is therefore, both for legal and technical reasons, of domestic application only. The State where the permanent establishment is situated could claim the right not to tax such profits at the reduced rate as, generally, it does not tax the dividends distributed by the company to which the permanent establishment belongs. Moreover, a State which has adopted a split-rate system usually has other economic policy objectives, such as the promotion of the capital market, by encouraging resident companies to distribute dividends. The extension of the reduced rate to the profits of the permanent establishment would not serve such a purpose at all, as the company distributing the dividends is not a resident of the State concerned.~~

~~41. This view is, however, disputed. The States in favour of extending the split-rate system to permanent establishments urge that as the essential feature of this system is a special technique of taxing profits which enterprises in a corporate form derive from their activities, and is designed to afford immediate relief from the double taxation levied on the profits distributed, it should be applied to permanent establishments in bilateral conventions against double taxation. It is generally recognised that, by the effects of their provisions, such conventions necessarily result in some integration of the taxation systems of the Contracting States. On this account, it is perfectly conceivable that profits made in a State (A) by a permanent establishment of a company resident in another State (B) should be taxed in State A according to the split-rate system. As a practical rule, the tax could in such case be calculated at the reduced rate (applicable to distributed profits) on that proportion of an establishment's profits which corresponds to the ratio between the profit distributed by the company to which it belongs and the latter's total profit; the remaining profit could be taxed at the higher rate. Of course, the two Contracting States would have to consult~~

~~together and exchange all information necessary for giving practical effect to this solution. Similar considerations apply to systems where distributions of profits made can be deducted from the taxable income of a company.~~

~~42. As regards the imputation system ("*avoir fiscal*" or "tax credit"), it seems doubtful, at least on a literal interpretation of the provisions of paragraph 3, whether it should be extended to non-resident companies in respect of dividends paid out of profits made by their permanent establishments. In fact, it has identical effects to those of the split-rate system but these effects are not immediate as they occur only at the time of the shareholder's personal taxation. From a purely economic and financial standpoint, however, it is conceivable that such profits should be treated as though they were profits of a distinct company in State A where the permanent establishment of a company which is a resident of State B is situated, and, to the extent that they are distributed, carry the *avoir fiscal* or tax credit. But to take the matter further, to avoid all discrimination it is necessary that this advantage should already have been accorded to shareholders who are residents of State B of companies which are residents of State A. From the practical standpoint, the two States concerned should, of course, agree upon the conditions and procedures for allowing the *avoir fiscal* or tax credit to shareholders who are themselves residents of either State, of the companies concerned that are residents of State B.~~

~~43. Contracting States which are faced with the problems described above may settle them in bilateral negotiations in the light of their peculiar circumstances.~~

40. Since a permanent establishment, by its very nature, does not distribute dividends, the tax treatment of distributions made by the enterprise to which the permanent establishment belongs is therefore outside the scope of paragraph 3. Paragraph 3 is restricted to the taxation of the profits from the activities of the permanent establishment itself and does not extend to the taxation of the enterprise as a whole. This is confirmed by the second sentence of the paragraph, which confirms that tax aspects related to the taxpayer that owns the permanent establishment, such as personal allowances and deductions, are outside the scope of the paragraph. Thus, issues related to various systems for the integration of the corporate and shareholder's taxes (e.g. advance corporate tax, précompte mobilier, computation of franked income and related dividend tax credits) are outside the scope of the paragraph.

41. In some States, the profits of a permanent establishment of an enterprise of another Contracting State are taxed at a higher rate than the

profits of enterprises of that State. This additional tax, sometimes referred to as a "branch tax", may be explained by the fact that if a subsidiary of the foreign enterprise earned the same profits as the permanent establishment and subsequently distributed these profits as a dividend, an additional tax would be levied on these dividends in accordance with paragraph 2 of Article 10. Where such tax is simply expressed as an additional tax payable on the profits of the permanent establishment, it must be considered as a tax levied on the profits of the activities of the permanent establishment itself and not as a tax on the enterprise in its capacity as owner of the permanent establishment. Such a tax would therefore be contrary to paragraph 3.

42. That situation must, however, be distinguished from that of a tax that would be imposed on amounts deducted, for instance as interest, in computing the profits of a permanent establishments (e.g. "branch level interest tax"); in that case, the tax would not be levied on the permanent establishment itself but, rather, on the enterprise to which the interest is considered to be paid and would therefore be outside the scope of paragraph 3 (depending on the circumstances, however, other provisions, such as those of Articles 7 and 11, may be relevant in determining whether such a tax is allowed by the Convention; see the last sentence of paragraph 1.3).

C-2 Comparable circumstances for the purposes of paragraph 3

Description of the issue

45. Contrary to paragraph 1, paragraph 3 does not provide that the enterprise that is the object of the comparison has to be in the same circumstances as the permanent establishment. All that is required is that the enterprise be "carrying on the same activities". This might imply that a permanent establishment and an enterprise are always in the same circumstances for purposes of paragraph 3.

46. A practical example of this difficulty would be a foreign charitable organisation carrying on business activities in a State through a permanent establishment situated therein. If that organisation did not get the benefits of the tax exemption given to charitable organisations of the State of the permanent establishment, could it obtain that treatment under paragraph 3?

Conclusions reached by the Committee

47. The Committee agreed to clarify that regulated and unregulated activities are not the same so that the taxation of a permanent establishment whose activities include the borrowing and lending of money but which is not

registered as a bank is not entitled to the same tax treatment as domestic banks since it does not carry on the same activities.

48. As regards the issue of the application of paragraph 3 to charitable organisations, the Committee concluded that, as regards charitable organisations that would qualify as enterprises of a Contracting State having a permanent establishment in the other State, the effect of paragraph 3 would depend on the particular treatment and regulation of charitable activities for tax and non-tax purposes. For instance, the Committee noted that its above conclusion on regulated and unregulated activities would be relevant to the extent that charitable activities are regulated in a country. Similarly, if a country restricted the preferential treatment of charitable activities to activities taking place in the country, the fact that such treatment would not apply to organisations that carry on charitable activities outside the country would not violate paragraph 3. The Committee also noted that paragraphs 5 to 8 of the Commentary on Article 24 already deal with this issue in the context of paragraph 1 and agreed that similar paragraphs might be included in the Commentary on paragraph 3.

49. Based on these conclusions, the Committee decided to make the following changes to the Commentary.

Changes to the Commentary

50. *Add the following new paragraph 22.2 to the Commentary on Article 24 and (changes to the existing text of the Commentary appear in* **bold italics** *for additions and ~~strikethrough~~ for deletions):*

> ***22.2 Similarly, regulated and unregulated activities would generally not constitute the "same activities" for the purposes of paragraph 3. Thus, for instance, paragraph 3 would not require that the taxation on a permanent establishment whose activities include the borrowing and lending of money but which is not registered as a bank be not less favourably levied than that of domestic banks since the permanent establishment does not carry on the same activities. Another example would be that of activities carried on by a State or its public bodies, which, since they are controlled by the State, could not be considered, for the purposes of paragraph 3, to be similar to activities that an enterprise of the other State performs through a permanent establishment.***

51. *Replace paragraph 28 of the Commentary on Article 24 by the following:*

> 28. Also, it goes without saying that non-resident enterprises are not entitled to tax advantages attaching to activities the exercise of which is strictly reserved, on grounds of national interest, defence, protection of the national economy, etc., to domestic enterprises, since non-resident enterprises are not allowed to engage in such activities.

 MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

28.1 Finally, the provisions of paragraph 3 should not be construed as obliging a State which accords special taxation privileges to non-profit institutions whose activities are performed for purposes of public benefit that are specific to that State, to extend the same privileges to permanent establishments of similar institutions of the other State whose activities are not exclusively for the first-mentioned State's public benefit.

C-3 Application of paragraph 3 to specific domestic provisions

Description of the issue

52. Paragraphs 24 to 28 of the Commentary on Article 24 discuss to what extent certain domestic provisions have to be extended to permanent establishments under paragraph 3. These paragraphs provide, for example, that deductions, depreciation and reserves allowable to local enterprises should be extended to permanent establishments insofar as the profits from the activities to which such deductions, depreciation and reserves relate are taxable in that State; options of carrying forward or backward a loss should be made available as regards the loss on the own business activities of the permanent establishment; the same rules should apply with respect to the taxation of capital gains realised on the alienation of assets, and tax incentive measures should be extended insofar as the permanent establishment fulfils the same conditions and requirements and is allowed to exercise the activities to which these incentives are applicable.

53. A first question is whether the application of paragraph 3 to other provisions of domestic law should also be discussed. BIAC referred to new technical developments in the tax legislation and tax practices throughout the OECD countries that have the effect of denying certain (usually extraterritorial) deductions to a host jurisdiction permanent establishment. It suggested that legitimate offshore deductions relative to the host country income earning activities should be unquestionably allowable where they relate to a local permanent establishment.

54. Another question is whether paragraphs 29 to 35 of the Commentary on Article 24, which discuss the application of paragraph 3 to special rules for the taxation of dividends distributed between companies but which indicate that no consensus could be reached on this issue, could be revisited in order to now present an agreed view.

55. Similarly, paragraphs 49 to 54 of the Commentary on Article 24 discuss the extension to permanent establishments of domestic rules granting relief of double taxation in the case of dividends, interest and royalties received from another State. These paragraphs should be reviewed to ensure consistency with the conclusions on the treatment of dividends distributed

between companies and to take account of recent changes in the domestic law of some OECD countries.

Conclusions reached by the Committee

56. The Committee first concluded that there was no need to expand the list of domestic provisions that are currently analysed in paragraphs 24 to 28 of the Commentary but that it should be clarified that these paragraphs do not provide an exhaustive discussion of the consequences of paragraph 3. It also concluded that the issue raised by BIAC was more related to paragraph 3 of Article 7 than to paragraph 3 of Article 24.

57. As regards the revision of paragraphs 29 to 35 and 49 to 54, the Committee reached the following conclusions.

58. Paragraphs 29 to 35 of the existing Commentary conclude that there are different opinions on the issue of whether paragraph 3 requires that a "participation exemption" or "indirect tax credit" regime available to dividends received by a domestic company should be available with respect to the dividends received by the permanent establishment of a foreign company. Paragraph 33 concludes that:

> In view of these divergent attitudes, as well as of the existence of the situations just described, it would be advisable for States, when concluding bilateral conventions, to make clear the interpretation they give to the first sentence of paragraph 3. They can, if they so desire, explain their position, or change it as compared with their previous practice, in a protocol or any other document annexed to the convention.

59. Paragraphs 34 and 35 go on to put forward solutions that would address the main problem that would arise from extending the benefits of the "participation exemption" or "indirect tax credit" to permanent establishments, *i.e.* the loss of the withholding tax on dividends (see below), but these solutions would require changes to the wording of other Articles, in particular Article 10.

60. The Committee noted that the main argument put forward in paragraph 31 against extending the benefits of the "participation exemption" or "indirect tax credit" to permanent establishments is the fact that in the case of dividends received by a resident company, a withholding tax may be levied upon a subsequent re-distribution of the dividends by that company, whereas, in the case of dividends received by a permanent establishment, paragraph 5 of Article 10 would prevent the State where the permanent establishment is located from levying such a withholding tax upon a subsequent re-distribution.

61. This appears to be a legitimate practical concern but it is not clear to what extent that is different from the problem arising from branch taxation.

62. The Committee also noted that paragraphs 29 to 35 do not expressly distinguish between dividends received by a permanent establishment from companies that are resident of the same State and from companies that are resident of third States.

63. As regards paragraphs 49 to 54, which deal with extension to permanent establishments of domestic rules granting relief of juridical double taxation in the case of dividends, interest and royalties received from another State, the Committee agreed that paragraph 3 of Article 24 requires States to extend relief of double taxation to permanent establishments but also that that this does not mean that the permanent establishment is entitled to treaty benefits as if it were a resident.

64. Also, the Committee agreed that since the OECD Model Tax Convention does not allow source taxation of royalties, it would be more appropriate for paragraphs 50 to 52 not to refer to source taxation of royalties but simply to note that the same conclusions apply to other income that may be taxed at source under some treaties.

Changes to the Commentary

65. *Replace paragraph 25 of the Commentary on Article 24 by the following (changes to the existing Commentary appear in **bold italics** for additions and ~~strikethrough~~ for deletions):*

> 25. Although the general rules mentioned above rarely give rise to any difficulties with regard to the principle of non-discrimination, ***they do not constitute an exhaustive list of the possible consequences of that principle with respect to the determination of the tax base. The application of that principle may be less clear in the case of*** ~~the same does not always hold good for the~~ tax incentive measures which most countries, faced with such problems as decentralisation of industry, development of economically backward regions, or the promotion of new activities necessary for the expansion of the economy, have introduced in order to facilitate the solution of these problems by means of tax exemptions, reductions or other tax advantages given to enterprises for investment which is in line with official objectives.

66. *Replace paragraphs 49 to 52 of the Commentary on Article 24 by the following (changes to the existing Commentary appear in **bold italics** for additions and ~~strikethrough~~ for deletions):*

E. *Credit for foreign tax*

49. In a related context, when ***foreign income is included in the profits attributable to*** a permanent establishment ~~receives foreign income which is included in its taxable profits~~, it is right by virtue of the same principle to grant to the permanent establishment credit for foreign tax borne by such income when such credit is granted to resident enterprises under domestic laws.

50. If in a Contracting State (A) in which is situated a permanent establishment of an enterprise of the other Contracting State (B), credit for tax levied in a third State (C) can be allowed only by virtue of a convention, then the more general question arises as to the extension to permanent establishments of the benefit of ***credit provisions included in*** tax conventions concluded with third States. ***Whilst the permanent establishment is not itself a person and is therefore not entitled to the benefits of these tax conventions, this issue is relevant to the taxation on the permanent establishment.*** This question is examined below ***in*** ~~,~~ the particular case of dividends ***or***~~,~~ interest ~~and royalties being dealt with in paragraph 51~~.

F. *Extension to permanent establishments of the benefit of the credit provisions of double taxation conventions concluded with third States*

51. When the permanent establishment in a Contracting State of a resident enterprise of another Contracting State receives dividends ***or***~~,~~ interest ~~or royalties~~ from a third State, then the question arises as to whether and to what extent the Contracting State in which the permanent establishment is situated should credit the tax that cannot be recovered from the third State.

52. There is agreement that double taxation arises in these situations and that some method of relief should be found. The majority of member countries are able to grant credit in these cases on the basis of their domestic law or under paragraph 3. States that cannot give credit in such a way or that wish to clarify the situation may wish to supplement the provision in their convention with the Contracting State in which the enterprise is resident by wording that allows the State in which the permanent establishment is situated to credit the tax liability in the State in which the income originates to an amount that does not exceed the amount that resident enterprises in the Contracting State in which the permanent establishment is situated can claim on the basis of the Contracting State's convention with the third State. If the tax that cannot be recovered under the convention between the third State and the State of residence of the enterprise which has a permanent establishment in the other Contracting State is lower than that under the convention

 MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

between the third State and the Contracting State in which the permanent establishment is situated, then only the lower tax collected in the third State shall be credited. This result would be achieved by adding the following words after the first sentence of paragraph 3:

> When a permanent establishment in a Contracting State of an enterprise of the other Contracting State receives dividends ***or***~~,~~ interest ~~or royalties~~ from a third State and the ***holding or debt-claim*** ~~right or the asset~~ in respect of which the dividends ***or***~~,~~ interest ~~or royalties~~ are paid is effectively connected with that permanent establishment, the first-mentioned State shall grant a tax credit in respect of the tax paid in the third State on the dividends ***or***~~,~~ interest ~~or royalties~~, as the case may be, by applying the rate of tax provided in the convention with respect to taxes on income and capital between the State of which the enterprise is a resident and the third State. However, the amount of the credit shall not exceed the amount that an enterprise that is a resident of the first-mentioned State can claim under that State's convention on income and capital with the third State.

If the convention also provides for other categories of income that may be taxed in the State in which they arise and for which credit should be given (e.g. royalties, in some conventions), the above provision should be amended to also cover these.

C-4 Paragraph 3 and transfer pricing rules

Description of the issue

67. Transfer pricing rules may affect the relationship between a permanent establishment and the rest of the enterprise of which it is part. It could be argued that this results in taxation that is less favourable than that on a domestic enterprise. This raises the question of the relationship between Articles 24, 7 and 9 of the OECD Model.

Conclusions reached by the Committee

68. The Committee agreed that since the application of the arm's length standard to the determination of the profits attributable to a permanent establishment is mandated by paragraph 2 of Article 7, this cannot be considered a violation of paragraph 3 of Article 24, especially since the same arm's length standard would also apply to transactions between a domestic enterprise and a foreign related enterprise. It decided that this should be clarified in the Commentary.

Changes to the Commentary

69. *Add the following new paragraph 24.2 to the Commentary on Article 24:*

24.2 Also, it is clear that the application of transfer pricing rules based on the arm's length standard in the case of transfers from a permanent establishment to its head office (or vice versa) cannot be considered to be a violation of paragraph 3 even if such rules do not apply to transfers within an enterprise of the Contracting State where the permanent establishment is located. Indeed, the application of the arm's length standard to the determination of the profits attributable to a permanent establishment is mandated by paragraph 2 of Article 7 and that paragraph forms part of the context in which paragraph 3 of Article 24 must be read; also, since Article 9 would authorize the application of the arm's length standard to a transfer between a domestic enterprise and a foreign related enterprise, one cannot consider that its application in the case of a permanent establishment results in less favourable taxation than that levied on an enterprise of the Contracting State where the permanent establishment is located.

C-5 Tax rates applicable to the profits attributable to a permanent establishment

Description of issue

70. To what extent can the State where a permanent establishment is located take into account the profits of the whole enterprise to which the permanent establishment belongs in applying a progressive scale of tax rates? Also, should the tax-free threshold be granted in the State where the permanent establishment is located and in the State of the foreign enterprise? Similarly, in order to be able to compare the tax rate on the permanent establishment's profits with the tax rate of a domestic enterprise, to what extent can the worldwide income of the enterprise (possibly minus the amount of the tax free threshold) be the basis for the application of the progressive tax rate?

71. Another question is which elements are covered by the second sentence of paragraph 3; specifically, whether this sentence allows for the application of tax-free thresholds to residents only.

Conclusions reached by the Committee

72. The Committee noted that these issues were already addressed in paragraphs 37 to 39 of the Commentary on Article 24, which recognise that paragraph 3 allows the State where the permanent establishment is located to take account of the overall profits of the enterprise in determining the rate at

which the profits of the permanent establishment should be taxed. Whilst a majority of delegates considered that the conclusions put forward in these paragraphs were correct and that no changes were needed, others suggested that they appeared to conflict with the Committee's conclusion that paragraph 3 refers to taxation on the activities of the permanent establishment, not to taxation of the foreign enterprise as a whole (see Issue C-1 "Structure and rate of tax for purposes of paragraph 3").

73. The Committee discussed extensively whether such conflict existed. Many delegates considered that paragraphs 37-39 were a logical extension of the principle of exemption with progression recognized in Article 23 on elimination of double taxation: in determining the tax rate applicable to the profits of a permanent establishment, it was logical to take account of the overall ability to pay of a taxpayer, which could only be determined by taking account of the overall income of that taxpayer. That did not mean, however, that taxation was then applied to profits not attributable to the permanent establishment.

74. The existing practices of countries in that area were discussed. Two specific examples were discussed. First, it was noted that if a taxpayer had two or more permanent establishments in a country, most countries would aggregate the profits of these permanent establishments for purposes of taxation, thereby taking account of at least some other profits of the foreign enterprise in determining the rate applicable for the taxation on a single permanent establishment. Second, it was also noted that many countries would similarly aggregate the permanent establishment profits with those that are taxable without limitation under other Articles (*e.g.* Article 17) for purpose of determining the applicable rate. Reference was also made to a United Kingdom decision that confirms the principles put forward in paragraphs 37-39 and to the fact that some countries expressly confirm that result in their treaties.

75. It was noted, however, that whilst paragraph 3 did not prohibit States from taking account of the foreign profits of an enterprise in determining the applicable tax rate which is then applied only on the profits of the permanent establishment, it was clear that this could only be done if the domestic tax law provided for that result.

76. As regards tax-free thresholds, the Committee agreed that whether or not a domestic tax-free threshold is covered by the first or the second sentence of paragraph 3 depends on how that threshold is designed under domestic law. Assume, for example, that a personal tax credit of 2 000 is granted to individuals who have dependent children. In that case, the second sentence of paragraph 3 would prevent a non-resident individual with dependent children who has a permanent establishment to which profits

of 2 000 are attributable from claiming that he should not pay any tax in the State in which the permanent establishment is located. A second example would be where the domestic law provides that the tax rate on the first 10 000 of income of a resident individual taxpayer is 0%, that the tax rate on the subsequent 15 000 of income is 20% and that the rate applicable to the remaining income is 35% but that the rate applicable to non-resident individuals in 25%. In that case, whilst a non-resident individual who has a permanent establishment to which profits of 5 000 are attributable but who has 30 000 of other foreign income could not claim that he should not pay any tax in that State, paragraph 3 would require the application of the domestic tax rates to that individual. The applicable rate would then be determined by taking into account the worldwide income. In the above example, that would mean that since the taxpayer would pay tax of 6 500 if he were a resident, the maximum rate applicable under paragraph 3 is 18.57% (*i.e.* 6 500/35 000). This conclusion is based on the fact that in the second example, the tax-free threshold is related to the amount of income and not to the civil status or family responsibilities of the taxpayer (second sentence of paragraph 3).[1]

D. ISSUES RELATED TO PARAGRAPH 4

(*see also issue E-1 "Thin Capitalisation rules"*)

D-1 Deductions covered by paragraph 4

Description of the issue

77. With certain exceptions, interest, royalties and other disbursements paid by an enterprise of a Contracting State to a resident of the other Contracting State and debts to a resident of the other Contracting State shall, for the purpose of determining the taxable profits of such enterprise, be deductible under the same conditions as if they had been paid to a resident of the first mentioned State.

78. BIAC suggested that a domestic provision under which interest expenses are disallowed as deductions when the underlying borrowing is from a foreign (unrelated) party, as contrasted to the situation in which the borrowing is from a local (unrelated) party, is in violation of Article 24. Another case was raised in the context of deferral of taxes. Domestic rules may generally allow deductions when expenses are accrued but allow non-residents such deductions only when the respective payment was paid.

79. Also, the question arises whether paragraph 4 allows a State to take account of the different compliance and administration issues arising in the case of payments to non-residents. This is relevant for countries that have domestic law provisions imposing more or different requirements as regards

the deduction of payments made to non-residents. These provisions may have been introduced to avoid tax evasion, especially where there is only limited exchange of information possible and no agreement for assistance in collection.

Conclusions reached by the Committee

80. As regards the deferral of deductions, the Committee agreed that different rules as to when expenses may be deducted may be in violation of paragraph 4 (subject to the other requirements of that paragraph).

81. As regards the question of whether paragraph 4 allows a State to take account of the different compliance and administration issues arising in the case of payments to non-residents, the Committee noted that paragraph 59 of the Commentary on paragraph 5 already includes a statement that additional information requirements would not constitute a violation of that paragraph and agreed that a similar clarification should be made with respect to paragraph 4. Based on this conclusion, the Committee decided to make the following change to the Commentary.

Change to the Commentary

82. *Add the following new paragraphs 56.1 to the Commentary on Article 24:*

56.1 Also, paragraph 4 does not prohibit additional information requirements with respect to payments made to non-residents since these requirements are intended to ensure similar levels of compliance and verification in the case of payments to residents and non-residents.

E. ISSUES RELATED TO PARAGRAPH 5

E-1 Thin capitalisation rules

Description of the issue

83. The Committee examined whether and to what extent the current wording of paragraphs 4 and 5 can be interpreted to allow the application of thin capitalisation rules and whether any clarification is necessary in this regard.

84. BIAC has suggested that paragraph 4 allows, in calculating the taxable income of a company resident of a Contracting State, a deduction for interest paid on money owed to another person (assuming, presumably, that it passes the arm's length test) who is resident of the other State. According to BIAC, although the wording does not specify whether or not the creditor is or is not a related party, it most certainly does not exclude a related party. BIAC thinks

that an unequal treatment may arise from the application of certain (artificially tilted) thin capitalisation rules, including the so-called earnings stripping provisions.

Conclusions of the Committee

85. The Committee noted that paragraph 56 of the current Commentary already deals with the application of paragraph 4 with respect to thin capitalisation rules:

> 56. Paragraph 4 does not prohibit the country of the borrower from treating interest as a dividend under its domestic rules on thin capitalisation insofar as these are compatible with paragraph 1 of Article 9 or paragraph 6 of Article 11. However, if such treatment results from rules which are not compatible with the said Articles and which only apply to non-resident creditors (to the exclusion of resident creditors), then such treatment is prohibited by paragraph 4.

86. The Committee agreed that paragraph 56 was correct but noted that it only deals with thin capitalisation rules that have the effect of recharacterising interest as a dividend. Since some thin capitalisation rules have the effect of disallowing or deferring the deduction of interest rather than recharacterising it as a dividend, it was agreed to modify the paragraph to clarify that it applies more generally.

87. As regards paragraph 5 of Article 24, however, the Committee concluded that paragraph 58 of the Commentary should be amended since paragraph 5 would generally not be relevant for most thin capitalisation rules because the direct focus of thin capitalisation rules is not the relationship between an enterprise and the persons who owns its capital (*i.e.* company-shareholder relationship) but, instead, the payment of interest from a resident enterprise to a non-resident related creditor (debtor-creditor relationship), which would seem to be outside the scope of paragraph 5 since that paragraph addresses discrimination based on foreign ownership of the capital of the enterprise. This was illustrated by the fact that the thin capitalisation rules of most countries would apply to a local company with a local parent that makes interest payments to foreign related companies. Under that view, thin capitalisation rules would generally be outside the scope of paragraph 5 as they would not constitute discrimination based on foreign ownership of the capital of a domestic enterprise but, instead, on the fact that the domestic enterprise has foreign related creditors.

88. The Committee also agreed that the Commentary should clarify that even in cases where thin capitalisation rules apply only to enterprises of a Contracting State the capital of which is wholly or partly owned or controlled, directly or indirectly, by non-residents, these rules do not violate paragraph 5

to the extent that they result in adjustments to profits that are made in accordance with paragraph 1 of Article 9 or paragraph 6 of Article 11.

89. Based on this conclusion, the Committee decided to make the following changes to the Commentary.

Changes to the Commentary

90. *Replace paragraph 56 of the Commentary on Article 24 by the following (changes to the existing text of the Commentary appear in **bold italics** for additions and ~~strikethrough~~ for deletions):*

> 56. Paragraph 4 does not prohibit the country of the borrower ~~from treating interest as a dividend under~~ ***from applying*** its domestic rules on thin capitalisation insofar as these are compatible with paragraph 1 of Article 9 or paragraph 6 of Article 11. However, if such treatment results from rules which are not compatible with the said Articles and which only apply to non-resident creditors (to the exclusion of resident creditors), then such treatment is prohibited by paragraph 4.

91. *Replace paragraph 58 of the Commentary on Article 24 by the following (changes to the existing text of the Commentary appear in **bold italics** for additions and ~~strikethrough~~ for deletions):*

> ***58. Since the paragraph prevents the discrimination of a resident enterprise that is solely based on who owns or controls the capital of that enterprise, it would not prima facie be relevant with respect to rules that provide for a different treatment of an enterprise based on whether it pays interest to resident or non-resident creditors. The paragraph is not concerned with rules based on a debtor-creditor relationship as long as the different treatment resulting from the rules is not based on whether or not non-residents own or control, wholly or partly, directly or indirectly, the capital of the enterprise. For example, if under a State's domestic thin capitalisation rules, a resident enterprise is not allowed to deduct interest paid to a non-resident associated enterprise, that rule would not be in violation of paragraph 5 even where it would be applied to payments of interest made to a creditor that would own or control the capital of the enterprise, provided that the treatment would be the same if the interest had been paid to a non-resident associated enterprise that did not itself own or control any of the capital of the payer. Clearly, however, such a domestic law rule could be in violation of paragraph 4 to the extent that different conditions would apply for the deduction of interest paid to residents and non-residents and it will therefore be important to determine, for purposes of that paragraph, whether the application of the rule is compatible with the provisions of paragraph 1 of Article 9 or paragraph 6 of Article 11 (see paragraph 56 above).*** ~~Paragraph 5, though relevant in principle to thin~~

R (22)

~~capitalisation, is worded in such general terms that it must take second place to more specific provisions in the Convention. Thus paragraph 4 (referring to paragraph 1 of Article 9 and paragraph 6 of Article 11) takes precedence over this paragraph in relation to the deduction of interest.~~ ***This would also be important for purposes of paragraph 5 in the case of thin capitalisation rules that would apply only to enterprises of a Contracting State the capital of which is wholly or partly owned or controlled, directly or indirectly, by non-residents. Indeed, since the provisions of paragraph 1 of Article 9 or paragraph 6 of Article 11 form part of the context in which paragraph 5 must be read (as required by Article 31 of the Vienna Convention on the Law of Treaties), adjustments which are compatible with these provisions could not be considered to violate the provisions of paragraph 5.***

E-2 Interpretation of the term “other similar enterprises”

Description of the issue

92. Paragraph 5 forbids a Contracting State to give less favourable treatment to an enterprise the capital of which is owned or controlled, wholly or partly, directly or indirectly, by one or more residents of the other Contracting State. Neither the Article nor the Commentary, however, states with which resident enterprise it should be compared. Two different interpretations appear possible: to compare it with a domestic enterprise owned by residents or to compare it with a domestic enterprise owned by third-country residents, which would be tantamount to making paragraph 5 a most favoured nation clause. A third view may be that both options are within the scope of paragraph 5.

Conclusions reached by the Committee

93. The Committee reached the conclusion that the right comparator for the purposes of paragraph 5 was a domestic enterprise owned by residents but agreed that there was no need to clarify this issue in the Commentary as long as there was no practical reason to do so.

F. ISSUES RELATED TO PARAGRAPH 6

F-1 Application of Article 24 to all taxes notwithstanding Article 2

Description of the issue

94. The question has been raised whether changes to the Commentary should be made to emphasise the fact that Article 24 apply to all taxes and not

only income taxes. BIAC suggested discussing the application of Article 24 to such other taxes and levies on the grounds that it would focus attention for all interested parties on the broad scope of coverage of Article 24.

Conclusions reached by the Committee

95. The Committee agreed that, in light of paragraph 6 of Article 24, there was no doubt as to the broad scope of the Article and noted that that broad scope will be emphasised by the addition of the examples in proposed paragraphs 11.6 and 11.7 of the Commentary.

ANNEX

ISSUES THAT REQUIRE A MORE FUNDAMENTAL ANALYSIS OF THE ISSUE OF NON-DISCRIMINATION AND TAXATION

1. Should there be changes to the Article to deal with other forms of tax discrimination?

Description of the issue

1. Should amendments be made to Article 24 to deal with other forms of tax discrimination? Some of the suggestions that have been made are:

- A provision along the lines of paragraph 8 of Article 26 of the Belgium-Netherlands treaty, which deals with the right to claim the benefit of the personal allowances which is granted in one contracting State):

  > 8. The right to family allowances deriving from the social security legislation of a Contracting State shall be considered equal, for taxation purposes in the other Contracting State, to the right to family allowances deriving from the social security legislation of this State.

- Addition of a paragraph dealing with cross-border reorganizations (along the line of the following paragraph XIII(8) of the Canada-U.S. treaty:

  > 8. Where a resident of a Contracting State alienates property in the course of a corporate or other organization, reorganization, amalgamation, division or similar transaction and profit, gain or income with respect to such alienation is not recognized for the purpose of taxation in that State, if requested to do so by the person who acquires the property, the competent authority of the other Contracting State may agree, in order to avoid double taxation and subject to terms and conditions satisfactory to such competent authority, to defer the recognition of the profit, gain or income with respect to such property for the purpose of taxation in that other State until such time and in such manner as may be stipulated in the agreement.

2. Application of provisions of non-tax agreements to taxation and relationship between Article 24 and such other agreements

Description of the issue

2. A number of non-tax agreements, such as the WTO Agreements (and in particular the GATS) and bilateral investment agreements, include general rules intended to prevent some forms of trade or investment discrimination. Since tax measures may be used as a form of disguised discrimination against foreign production or investment, these provisions sometimes apply to some or all forms of taxation. This creates a potential overlap with tax treaty provisions and, since these provisions are often very broadly worded, uncertainty as regards their application to some tax measures. Paragraphs 44.1 to 44.7 of the Commentary on Article 25 already deal with some problems created by the provisions of the GATS.

3. BIAC has suggested that the general non-discrimination provisions of these other agreements should be a source of inspiration for extending the scope of Article 24. According to BIAC, the Committee should

> [...] look at other, non-tax, treaties which contain nondiscrimination articles or clauses, *e.g.*, bilateral investment treaties, trade agreements, other bilateral or multilateral agreements, where the concept is applied much more broadly. Article 24 should be contrasted with the "national treatment" and "most favored nation" clauses of these other treaties. The intention should be to provide additional guidelines for determining when a case is to be regarded as discriminatory (either by amending the Treaty language or the Commentary), so that taxpayers can rely on the protection of the nondiscrimination article. We think this would be most instructive, leading, perhaps, to a more reasonable interpretation of nondiscrimination in a tax context.

3. Possible impact of European Community Law on Article 24

Description of the issue

4. European Community law may interact with tax treaties in different ways, which can have an impact on treaties between EC member States and also with non-EC member States.

5. First, courts, primarily in EU States, might be tempted to extend to the interpretation of Article 24 some of the principles elaborated by the ECJ in deciding tax cases related to the four freedoms.

6. Second, it has been argued that Article 24 can result in an indirect application of provisions of the EC-Treaty to residents of non-EC Member State, insofar as the case is covered by the provisions of that Article. The following is an example of this type of argument. Some European States have rules which allow non-resident taxpayers who are nationals of a European State to opt for the tax treatment of residents if their income derived from their territory represents 90% or more of their worldwide income. For instance, a national of Austria who is a resident of the U.S. can opt for such a treatment if he earns at least 90% of his income in Austria. A national of the U.S. being resident in the U.S. and earning at least 90% of his income in Austria does not benefit from such an option. Thus, it could be argued that EU-States that have introduced specific rules for nationals of EEC/EC Member States might be forced to extend these rules to nationals of States with which they have a tax treaty provision corresponding to paragraph 1 of Article 24.

7. Third, it might be useful to consider some of the concepts and arguments developed under European Law, *e.g.* the concept of justification, when discussing the desirability of alternative or additional non-discrimination rules for tax treaties.

8. Fourth, there might be more technical issues where the impact of European Law on the interpretation of Article 24 is unclear and should be examined. For example, it was suggested that the conclusions reached under section C-5 “Tax rates applicable to the profits attributable to a permanent establishment” and already reflected in paragraphs 37-39 of the Commentary on Article 24 might create a problem for EU member States as European law might restrict their ability to apply these conclusions.

4. Application of paragraph 1 to persons who are not residents of either States

Description of the issue

9. The second sentence of paragraph 1 states that the provision shall also apply to persons who are not residents of one or both of the Contracting States. The principle is also illustrated in paragraph 2 of the Commentary on Article 24. This approach might lead to unwelcome results, *e.g.*, when States make a concession to a third treaty partner based on nationality.

5. Inclusion of paragraph 2 of Article 24 in treaties

Description of the issue

10. Because some countries do not include paragraph 2 in their tax treaties, the question arises whether paragraph 2 should be kept in the Model Tax Convention.

6. Application of paragraph 1 to transparent entities

Description of the issue

11. The application of paragraph 1 in the case of transparent partnerships is problematic. A transparent partnership itself is not taxed and cannot, therefore, claim to be subjected to "any taxation or any requirement connected therewith, which is other or more burdensome" than taxation or requirements to which nationals are subjected. The partner cannot claim that different treatment is based on the fact that the partnership derives its status from the domestic law of another State because due to the definition in subparagraph *g*) (*ii*) of paragraph 1 of Article 3 the partnership is regarded as being a national itself (a national cannot base its complaint on the nationality of another non-national).

7. Meaning of "other or more burdensome taxation or any requirement connected therewith"

Description of the issue

12. To what extent do the words "other or more burdensome taxation or any requirement connected therewith" allow some differences of treatment? It may be useful to examine that wording if it is agreed that some differences of treatment can be justified by taking into account the overall treatment of the national of the other State. Some of the questions that relate to that issue are: the impact of paragraph 1 of Article 24 on procedural requirements; the relationship between paragraph 1 and the other provisions of the treaty allowing a State to tax; whether cash-flow disadvantages and the decrease of liquidity constitutes other or less favourable treatment; the impact of paragraph 1 on denials of subventions.

8. Group regime issues related to paragraph 5 of Article 24

Description of the issue

13. Some commentators have argued that it might be appropriate to allow consolidation of profits of a foreign owned or controlled subsidiary, which is taxable in the State where it is located, with the profits of other resident

companies of a group. Considering that the State would be able to take into account both the losses and the profits of such subsidiary (since it would tax two resident subsidiaries of the same foreign parent), it may be argued that such subsidiaries should benefit from domestic group regimes.

9. Treaty exemption that depends on VAT liability

Description of the issue

14. The issue was raised whether or not discrimination might arise from a system under which technical fees derived by a non-resident that does not have a permanent establishment in a country may only be found to be exempt under a treaty concluded by that country if the taxpayer agrees that the fees are subject to VAT. Such a rule would deny treaty benefits in case the taxpayer does not pay VAT.

10. Dispute resolution of issues related to Article 24

Description of the issue

15. Since taxpayers can generally claim the benefits of tax treaties in domestic courts, they may convince a court that a tax measure is in violation of the non-discrimination Article even if both States, which are the parties that concluded the tax treaty, disagree. Since most of the provisions of Article 24 are relatively general in their application and since there is some uncertainty as to their exact scope (in particular as regards paragraph 3 and 5), there is a real risk that Courts may strike down a legitimate tax measure as a violation of the non-discrimination Article. This may make some States reluctant to include some or all of the provisions of Article 24 in their bilateral treaties and may make it very difficult to extend the scope of the Article.

Note

1. As indicated in paragraph 8 of the Annex, the question of whether EU law might require a different result should be further examined.

R (23)

INTRODUCTION

1. Real Estate Investment Trusts ("REITs") first appeared in the United States in the 1960s and are now found throughout the world. The use of that investment vehicle has significantly expanded worldwide and more and more countries are introducing rules to facilitate the use of REITs. It has been estimated that, as of June 2006, REITs listed on stock-exchanges had a market capitalisation of US$ 608 billion and property assets worth in excess of US$ 890 billion.[1] The importance and the globalisation of investments in and through REITs have led the OECD to examine the cross-border tax issues that such investments raise for tax treaties.

2. The first draft of this report was prepared by an informal technical group of tax officials and experts from the REIT sector which was mandated by the OECD Committee on Fiscal Affairs to prepare an analysis of the issues related to the application of tax treaties to REITs and to present suggestions for additions to the Commentary of the OECD Model Tax Convention, including possible alternative provisions dealing with REITs that States wishing to do so could include in their bilateral treaties. The report of that technical group was presented to Working Party No. 1 on Tax Conventions and Related Questions, which is the sub-group of the OECD Committee on Fiscal Affairs that is responsible for updating the OECD Model Tax Convention. After discussion of the Report, which led to a few minor changes, the Report was released as a public discussion draft. In February 2008, Working Party No. 1 approved the Report after a discussion of the comments received. The Report was then presented to the Committee on Fiscal Affairs, which approved it on 20 June 2008.

3. For the purposes of this report, a REIT is a widely held company, trust or contractual or fiduciary arrangement that derives its income primarily from long-term investment in immovable property (real estate), distributes most of that income annually and does not pay income tax on income related to immovable property that is so distributed. The fact that the REIT vehicle does not pay tax on that income is the result of tax rules that provide for a single-level of taxation in the hands of the investors in the REIT (with corresponding withholding tax obligations imposed on the REIT with respect to its distributions to foreign investors).

4. Despite these common features, there may be significant differences between countries as regards how REITs are structured and how the tax exemption of the income is provided. In some countries, REITs were developed using the tax rules generally applicable to trusts and companies; in others, a specific REIT tax regime has been adopted.

MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

APPLICATION OF TAX TREATIES TO REIT INVESTMENTS

5. The following sections of the Report discuss the application of the provisions of the OECD Model Tax Convention to income from investments in and through REITs. In some cases, the Report puts forward changes to the Commentary of the OECD Model Tax Convention to allow countries wishing to do so to address in a bilateral treaty some of the issues examined in the Report. It is acknowledged, however, that some of the issues and suggestions discussed in this report may raise particular issues for countries that are members of the European Union. Whilst the Report describes some of these issues, it would have been beyond the mandate of the Group that prepared the first draft of the Report to try to deal with those. It was noted, however, that these issues were the subject of on-going work by the European Commission and Member States of the Community.

Classification of the income of a REIT

6. Rental income constitutes by far the largest part of the income of REITs. It is therefore assumed that most of the cross-border income derived by REITs would be covered by the provisions of bilateral tax treaties that are similar to Article 6 (Income from Immovable Property) of the OECD Model Tax Convention. Since REITs may also derive income from businesses carried on through immovable property without directly deriving income from such property, income of a REIT may also fall under Article 7 (Business Profits). REITs also derive capital gains from immovable property or securities that would be covered by Article 13 (Capital Gains) of the OECD Model, dividends covered by Article 10 (Dividends), interest from debt instruments (mostly mortgages) covered by Article 11 (Interest) and a small proportion of other types of income.

7. Since provisions of tax treaties that are based on Articles 6, 7 and 13 of the OECD Model grant to the State where immovable property is located an unlimited right to tax the income and capital gains derived from that immovable property or its alienation, as well as the business profits and gains attributable to a business carried on in that immovable property if it constitutes a permanent establishment, the typical income of a REIT that invests abroad would, under these provisions, be taxable in the *situs* country, with the country of residence exempting such income or providing a credit for the foreign tax levied on such income. This summary analysis, however, raises a number of issues.

Treaty entitlement of the REIT

8. A first difficulty relates to the determination of the REIT's own treaty entitlement. This is relevant not only as regards the application of the treaty

provisions to the income of the REIT but also as regards the application of tax treaties to the distributions of a REIT since, for example, Article 10 (Dividends) of the OECD Model applies to dividends "paid by a company which is a resident of a Contracting State".

9. Since the income of a REIT is typically distributed, the REIT is not, in a purely domestic context, taxed on that distributed income. As already mentioned, the tax mechanisms that ensure that result vary from country to country and can include, for example, rules that allow the deduction of REIT dividends or distributions, the tax exemption of a REIT that meets certain conditions, the tax exemption of the income of a REIT that meets certain conditions, the tax exemption of all the REIT's income, the tax exemption of only the part of the REIT's income that is distributed within a specified period of time or rules that allocate the income to the investors rather than to the REIT itself. It seems, however, that in most cases, the REIT would meet the condition of being liable to tax for purposes of the treaty definition of "resident of a Contracting State", subject to the particular problems arising from the application of tax treaties to trusts. There are a few countries, however, where this may not be the case and this is a question that would need to be clarified on a country-by-country basis during treaty negotiations.

Treaty entitlement of the REIT investor

10. In most cases, the investors in a REIT will be clearly entitled to the benefits of tax treaties concluded by their country of residence. It should be noted, however, that a part of investments in REITs come from pension funds and that some countries consider that pension funds are not entitled to treaty benefits absent specific treaty provisions.[2]

Who is the relevant taxpayer for purposes of tax treaties?

11. The determination of who is the relevant taxpayer for purposes of the application of tax treaties to the income derived by the REIT raises treaty interpretation issues.

12. It seems clear that absent specific provisions, the determination of whether the tax treaty provisions should be applied at the level of the REIT or at that of its investors will not be uniform between countries.

13. First, differences in REIT structures produce different results. For instance, a REIT may be structured as a contractual or fiduciary arrangement so that the income derived by the REIT is legally that of the investors for purposes of tax treaties and the REIT itself is merely the manager of the funds invested.

14. Second, domestic tax rules may allocate the REIT income to a taxpayer who is different from the one who is the legal owner of the income. Under

such rules, whilst the REIT might be the legal owner of the income, it may be considered not to be the economic owner of the income for purposes of taxation. Also, the REIT might be considered to be simply a pass-through entity for purposes of taxation. Conversely, it may be considered that whilst the income of a REIT is simply passed-through to the investors in the form of a distribution, that distribution does not retain the tax character of the underlying income so that the REIT remains the relevant taxpayer for purposes of the application of tax treaties.

15. The principles developed in the OECD Partnership Report are relevant to deal with cases where REITs are treated as pass-through entities. However, in many cases, the REIT will not constitute a transparent entity as described in the Partnership Report and will be the relevant taxpayer for purposes of the application of the provisions of tax treaties to the income that it derives from other countries.

16. Since, however, the REIT will not pay residence State tax on that income to the extent that it is distributed, this will create difficulties with respect to the application of domestic and treaty provisions for the relief of double taxation. The Committee considered that, as a general rule, it would be appropriate, as a policy matter, for a State to allow relief of double taxation for any source tax that has been levied on the REIT even if the residence State imposes tax on the investors rather than on the REIT itself. Where the domestic law of a country does not provide for the flow-through of relief, the Committee considers that that country should try to find a way to provide such relief.

17. The Committee also concluded that the question of the application of tax treaties to REIT income was intertwined with that of the treaty treatment of REIT distributions to foreign investors so that these two questions had to be examined together.

How should REIT distributions to foreign investors be treated under tax treaties?

18. The application of tax treaties to REIT distributions to foreign investors involves significant tax policy and treaty interpretation issues.

19. As a matter of treaty interpretation, it seems clear that where the REIT is a company that qualifies as a treaty resident to whom the underlying income is allocated for treaty purposes, its distributions to foreign investors constitute dividends covered by Article 10 of the OECD Model. This, however, will often not be the case as the REIT may be structured as a trust or as a contractual or fiduciary arrangement or may be treated as a pass-through vehicle under domestic tax law.

20. The Committee therefore went beyond a strict legal analysis based on existing provisions of tax treaties to try to articulate a tax treaty policy that would be generally applicable to REITs.

21. The starting point of that policy analysis was that the State in which the immovable property is located should have the primary, unlimited, right to tax that income. This has been a fundamental and consistent feature of provisions based on the OECD Model Tax Convention for a long time and whilst alternative views were briefly discussed, it was quickly concluded that this approach should not be challenged.

22. The real policy question, however, is whether a distribution from a REIT should be considered to be income from immovable property or income from investing in a security.

23. On the one hand, one could look at the underlying income of the REIT and consider that the distribution of that income is nothing more than the allocation of a share of that income. Under that view, it would be appropriate to treat that income as income from immovable property in the hands of each investor and require each of them to be taxed as if he/she had directly earned that income. That, however, would mean that the income would be typically subject to a high rate of tax and that the investors could be subject to filing requirements in the country where the immovable property is located.

24. On the other hand, one could consider that the investor is merely looking for an income distributing security that is, or is similar to, any publicly-traded share and should obtain the same treaty treatment as is normally given to the return on shares, which is covered by Article 10 (Dividends). A small investor in a REIT has no control over the immovable property acquired by the REIT and no connection to the particular property held by the REIT. Such a small investor cannot be viewed as having made an investment in the underlying immovable property held by the REIT any more than a shareholder of a multinational company can be viewed as having made an investment in the particular assets held by the company. Rather, the small investor invested in the REIT as an entity. The small investor is looking to the distributions from the REIT and the appreciation in its REIT interest for its investment returns just as a shareholder in a multinational company is looking to corporate dividends and share appreciation for its investment return.

25. It was noted, however, that there is a fundamental difference between a REIT distribution and other dividends since other dividends represent the after-tax distribution of income that has already been taxed in the country of residence of the company and/or in the country where the profits of that company arose. REIT distributions, on the other hand, represent income that has not been subjected to residence-based taxation at the entity level. To the extent that the treaty treatment of dividends takes account of the corporate

level taxation, which seems clear in the case of the lower rate applicable to substantial inter-corporate shareholdings, it could therefore be argued that a different treatment is warranted for REIT distributions. There are, however, other circumstances in which a reduced rate of withholding tax is applied notwithstanding that there is no underlying corporate tax. This would be the case with respect to interest on bonds, which is another type of security where there is no underlying corporate level tax (since interest is deductible) and in respect of which tax treaties generally provide for an even lower rate of tax than that applicable to dividends. REIT distributions are, of course, more of the nature of a return on equity than on debt. Even in the case of dividends, however, the treaty rules applicable to the income from portfolio investment usually provide for lower source taxation than on income from direct investment in immovable property, probably because the most practical, and usual, way of collecting tax from portfolio investment is through a withholding tax on the gross return that does not take account of the investment expenses of the investor (*e.g.* leverage costs).

26. The Committee noted that immovable property is increasingly viewed by capital markets as a separate asset class with mixed attributes of both equity and debt investment. Industry participants in the Group that prepared the first draft of this report have stressed that the yields on such an investment reflect a combination of attributes of both stocks and bonds.[3] Moreover, the very high distribution rates for REITs' income mean that the source tax levied in accordance with Article 10 will be substantial even though the rate of such a tax is at the rate provided for portfolio dividends. This is in contrast to other corporate vehicles, where the taxes generated by taxing dividends paid to foreign shareholders is much less substantial because of the low level of dividend distribution. By way of illustration, for the period from 1972 to 2006, distributed income represented an average of 57.1% of the total return for U.S. REITs in the FTSE NAREIT Equity REIT Index, whilst distributed income represented an average of just 28.2% of the total return for the securities in the Standard and Poor's 500 Index and just 26.4% of the total return for the securities in the Dow Jones Wilshire 5000.

27. For these reasons, it was concluded that an appropriate treaty policy would be to treat a REIT distribution to a small investor in the same way as a portfolio equity investment. It also concluded, however, that limiting the rate of source taxation to that applicable to portfolio dividends would not be appropriate in the case of an investor holding a large investment in a REIT. For such a large investor, the investment in the REIT may be a substitute for a direct investment in the underlying property of the REIT. In this situation, limiting the source State tax on distributions from the REIT to the reduced rate applicable to portfolio dividends or the even lower rate applicable to direct

dividends would seem inappropriate; such distributions should be subjected to the full tax rate provided by domestic law.

28. That policy could be implemented by providing that a distribution from a domestic REIT to a non-resident investor who owns an interest of less than 10% in the REIT would be subject to tax in the source-country at a rate not exceeding the portfolio dividend rate (*i.e.* 15%) provided in sub-paragraph 10(2)(b) of the OECD Model Tax Convention. Conversely, a distribution from a REIT to an investor who owns an interest of 10% or more in the REIT would not be eligible to any rate limitation under Article 10. That approach should apply regardless of the legal form of the REIT so that distributions from a REIT that are not covered by Article 10 would be treated in the same way.

29. The implementation of such a policy would require alternative treaty provisions that could be adopted by States wishing to do so. The Committee concluded that such alternative treaty provisions should be included in the Commentary on Article 10 of the OECD Model Tax Convention and it therefore decided to include the following new paragraphs in the Commentary (cross-references to that new section of the Commentary will also be added in the Commentary on Articles 6, 13 and 23).

Add the following heading and new paragraphs 67.1 to 67.7 to the Commentary on Article 10

IV. Distributions by Real Estate Investment Trusts

67.1 In many States, a large part of portfolio investment in immovable property is done through Real Estate Investment Trusts (REITs). A REIT may be loosely described as a widely held company, trust or contractual or fiduciary arrangement that derives its income primarily from long-term investment in immovable property, distributes most of that income annually and does not pay income tax on the income related to immovable property that is so distributed. The fact that the REIT vehicle does not pay tax on that income is the result of tax rules that provide for a single-level of taxation in the hands of the investors in the REIT.

67.2 The importance and the globalisation of investments in and through REITs have led the Committee on Fiscal Affairs to examine the tax treaty issues that arise from such investments. The results of that work appear in a report entitled "Tax Treaty Issues Related to REITS".[4]

67.3 One issue discussed in the report is the tax treaty treatment of cross-border distributions by a REIT. In the case of a small investor in a REIT, the investor has no control over the immovable property acquired by the REIT and no connection to that property. Notwithstanding the fact that the REIT itself will not pay tax on its distributed income, it may therefore be appropriate to consider that such an investor has not

invested in immovable property but, rather, has simply invested in a company and should be treated as receiving a portfolio dividend. Such a treatment would also reflect the blended attributes of a REIT investment, which combines the attributes of both shares and bonds. In contrast, a larger investor in a REIT would have a more particular interest in the immovable property acquired by the REIT; for that investor, the investment in the REIT may be seen as a substitute for an investment in the underlying property of the REIT. In this situation, it would not seem appropriate to restrict the source taxation of the distribution from the REIT since the REIT itself will not pay tax on its income.

67. 4 States that wish to achieve that result may agree bilaterally to replace paragraph 2 of the Article by the following:

> 2. However, such dividends may also be taxed in the Contracting State of which the company paying the dividends is a resident and according to the laws of that State, but if the beneficial owner of the dividends is a resident of the other Contracting State (other than a beneficial owner of dividends paid by a company which is a REIT in which such person holds, directly or indirectly, capital that represents at least 10 per cent of the value of all the capital in that company), the tax so charged shall not exceed:
>
> a) 5 per cent of the gross amount of the dividends if the beneficial owner is a company (other than a partnership) which holds directly at least 25 per cent of the capital of the company paying the dividends (other than a paying company that is a REIT);
>
> b) 15 per cent of the gross amount of the dividends in all other cases.

According to this provision, a large investor in a REIT is an investor holding, directly or indirectly, capital that represents at least 10% of the value of all the REIT's capital. States may, however, agree bilaterally to use a different threshold. Also, the provision applies to all distributions by a REIT; in the case of distributions of capital gains, however, the domestic law of some countries provides for a different threshold to differentiate between a large investor and a small investor entitled to taxation at the rate applicable to portfolio dividends and these countries may wish to amend the provision to preserve that distinction in their treaties. Finally, because it would be inappropriate to restrict the source taxation of a REIT distribution to a large investor, the drafting of subparagraph *a*) excludes dividends paid by a REIT from its application; thus, the subparagraph can never apply to such dividends, even if a company that did not hold capital representing 10% or more of the value of the capital of a REIT held at least 25% of its capital as computed in

accordance with paragraph 15 above. The State of source will therefore be able to tax such distributions to large investors regardless of the restrictions in subparagraphs *a*) and *b*).

67.5 Where, however, the REITs established in one of the Contracting States do not qualify as companies that are residents of that Contracting State, the provision will need to be amended to ensure that it applies to distributions by such REITs.

67.6 For example, if the REIT is a company that does not qualify as a resident of the State, paragraphs 1 and 2 of the Article will need to be amended as follows to achieve that result:

> 1. Dividends paid by a company which is a resident, or a REIT organised under the laws, of a Contracting State to a resident of the other Contracting State may be taxed in that other State.
>
> 2. However, such dividends may also be taxed in, and according to the laws of, the Contracting State of which the company paying the dividends is a resident or, in the case of a REIT, under the laws of which it has been organised, but if the beneficial owner of the dividends is a resident of the other Contracting State (other than a beneficial owner of dividends paid by a company which is a REIT in which such person holds, directly or indirectly, capital that represents at least 10 per cent of the value of all the capital in that company), the tax so charged shall not exceed:
>
> a) 5 per cent of the gross amount of the dividends if the beneficial owner is a company (other than a partnership) which holds directly at least 25 per cent of the capital of the company paying the dividends (other than a paying company that is a REIT);
>
> b) 15 per cent of the gross amount of the dividends in all other cases.

67.7 Similarly, in order to achieve that result where the REIT is structured as a trust or as a contractual or fiduciary arrangement and does not qualify as a company, States may agree bilaterally to add to the alternative version of paragraph 2 set forth in paragraph 67.4 above an additional provision drafted along the following lines:

> For the purposes of this Convention, where a REIT organised under the laws of a Contracting State makes a distribution of income to a resident of the other Contracting State who is the beneficial owner of that distribution, the distribution of that income shall be treated as a dividend paid by a company resident of the first-mentioned State.

Under this additional provision, the relevant distribution would be treated as a dividend and not, therefore, as another type of income (*e.g.*

income from immovable property or capital gain) for the purposes of applying Article 10 and the other Articles of the Convention. Clearly, however, that would not change the characterisation of that distribution for purposes of domestic law so that domestic law treatment would not be affected except for the purposes of applying the limitations imposed by the relevant provisions of the Convention.

Issues arising from this approach

30. The Committee also examined various technical issues related to this approach as well as its possible extension to situations where a foreign REIT invests in a domestic REIT or invests directly in domestic immovable property. The following reflects the conclusion of the Committee on these various issues.

Definition of REIT

31. A first design issue is how to define a REIT for purposes of the above rules. The Committee concluded that given the differences in domestic law concerning the structure and features of REITs, this should be dealt with bilaterally. For the purpose of the above provisions, countries would therefore be expected to include in their bilateral conventions specific definitions of REITs that would allow the application of these provisions to their own REITs. Such definitions may, for example, make reference to the relevant domestic provisions that define REITs for domestic tax purposes.

Distinction between large and small investor

32. A first issue related to a possible distinction between large and small investors is to what extent it would be possible to provide for different treatment of distributions, or different treatment of a REIT entity, based on the size of the shareholding. It was suggested that this involved some domestic and EU law principles. For example, it was noted that disclosure rules imposed by market regulators would typically require the disclosure of any investor owning more than a certain percentage (*e.g.* 5%) of a listed entity.

33. Clearly, a large investor should not be allowed to get the benefit of the lower rate applicable to portfolio interests in a REIT by simply dividing its investment in the REIT among a number of associated entities. This is why the provision put forward does not grant the lower rate to an investor who holds "directly or indirectly" capital that represents at least 10% of the value of the overall capital of a REIT. Also, the lower rate should not be granted in cases of abuse of the provision, for example, where a company with a holding of 10% or more has, shortly before the payment of a distribution, transferred its interests in a REIT to a number of small investors for the purpose of securing

the benefits of the lower rate, with a commitment to re-acquire these interests after the distribution. States that do not believe that they can prevent such arrangements through their domestic anti-abuse rules may find it appropriate to supplement the proposed provision by a paragraph subjecting the application of the lower rate to the condition that the interests in a REIT were not acquired primarily for the purpose of taking advantage of that lower rate.

34. A second issue is the determination of the level of capital ownership that would trigger the application of the "large investor" treatment. The approach put forward in this report suggests a threshold of 10% of the value of the capital of the REIT. Countries may, however, agree bilaterally to use a different threshold.

Taxation of distributions to large investors

35. It was accepted that, ideally, the tax levied on distributions to large investors should be commensurate with the tax levied on a return from a direct investment in immovable property. Whilst the above provisions do not limit the tax that may be charged in the State in which the immovable property is situated, some States may provide an option to file on a net basis.

Distribution of capital gains

36. The Committee generally agreed that it would be appropriate to provide the same treatment for distributions from capital gains and distributions from rental income derived by the REIT. For that reason, the above proposal treats distributions of both types of income in the same way. The same conclusion has generally been reached with respect to all other types of income that could be derived by a REIT. It was noted, however, that in the case of distributions of capital gains, some countries use a different threshold to differentiate between a large investor that is subject to source country tax without limitation under the Convention and a small investor entitled to taxation at the rate applicable to portfolio dividend; these countries may wish to preserve that distinction in their bilateral treaties.

Treatment of capital gains on interests in a REIT

37. The Committee examined the possible application of paragraph 4 of Article 13 to gains realized on the alienation of an interest in a REIT. Given that the purpose of a REIT is primarily to hold immovable property, the conditions for the application of that paragraph would be met when shares in a REIT are alienated (in the case of REITs that are set up in a non-corporate form, the same result would follow from either paragraph 1 of Article 13, which could apply to some REITs set up as contractual arrangements, or the modified

version of paragraph 4 that appears in paragraph 28.5 of the Commentary on Article 13).

38. Whilst it was agreed that applying paragraph 4 to allow the source taxation of gains resulting from the alienation of a large investor's interests in a REIT would be appropriate, different views were expressed as to whether that would also be an appropriate result for gains realized by small investors in a REIT.

39. For some countries, paragraph 4 was intended to apply to any gain on the alienation of shares in a company that derives its value primarily from immovable property and there would be no reason to distinguish between a REIT and a publicly held company with respect to the application of that paragraph, especially since a REIT is not taxed on its income. These countries considered that as long as a treaty does not provide an exception for the alienation of shares of companies listed on a stock exchange (as suggested in paragraph 28.7 of the Commentary on Article 13), there should not be a special exception for interests in a REIT.

40. Other countries, however, disagreed. For them, a small investor's interest in a REIT should be treated as a security rather than as an indirect holding in immovable property. They considered that this treatment of the small investor's interest in a REIT as a security was consistent with this report's conclusion regarding the appropriate treatment of such interest for purposes of the taxation of distributions. These countries also indicated that, in practice, it would be very difficult to administer the application of source taxation of gains on small interests in a widely held REIT. Some of them added that since REITs, unlike other entities deriving their value primarily from immovable property, are required to distribute most of their profits, it is unlikely that there would be significant residual profits to which the capital gain tax would apply (as compared to other companies).

41. It was also noted that allowing source taxation of such gains could result in a double exemption if the State of source did not exercise this taxing right and the State of residence of the investor was an exemption country (that problem, which is inherent to paragraph 4 of Article 13, is described in paragraph 28.9 of the Commentary on that Article).

42. The Committee concluded that the Commentary on Article 13, which already discusses possible exceptions to paragraph 4, should be supplemented to address a possible additional exception for gains on small interests in a REIT. It therefore decided to include the following new paragraphs in that Commentary.

Renumber paragraph 28.9 of the Commentary on Article 13 as paragraph 28.12 and add the following new paragraphs 28.9 to 28.11

28.9 Finally, a further possible exception relates to shares and similar interests in a Real Estate Investment Trust (see paragraphs 67.1 to 67.7 of the Commentary on Article 10 for background information on REITs). Whilst it would not seem appropriate to make an exception to paragraph 4 in the case of the alienation of a large investor's interests in a REIT, which could be considered to be the alienation of a substitute for a direct investment in immovable property, an exception to paragraph 4 for the alienation of a small investor's interest in a REIT may be considered to be appropriate.

28.10 As discussed in paragraph 67.3 of the Commentary on Article 10, it may be appropriate to consider a small investor's interest in a REIT as a security rather than as an indirect holding in immovable property. In this regard, in practice it would be very difficult to administer the application of source taxation of gains on small interests in a widely held REIT. Moreover, since REITs, unlike other entities deriving their value primarily from immovable property, are required to distribute most of their profits, it is unlikely that there would be significant residual profits to which the capital gain tax would apply (as compared to other companies). States that share this view may agree bilaterally to add, before the phrase "may be taxed in that other State", words such as "except shares held by a person who holds, directly or indirectly, interests representing less than 10 per cent of all the interests in a company if that company is a REIT". (If paragraph 4 is amended along the lines of paragraph 28.5 above to cover interests similar to shares, these words should be amended accordingly.)

28.11 Some States, however, consider that paragraph 4 was intended to apply to any gain on the alienation of shares in a company that derives its value primarily from immovable property and that there would be no reason to distinguish between a REIT and a publicly held company with respect to the application of that paragraph, especially since a REIT is not taxed on its income. These States consider that as long as there is no exception for the alienation of shares in companies quoted on a stock exchange (see paragraph 28.7 above), there should not be a special exception for interests in a REIT.

Relief of double taxation in the State of residence

43. The approach put forward in this note could require appropriate adjustments to the Article on relief of double taxation. It would be necessary, for instance, to avoid the application of the exemption method in the case of distributions to small investors in a REIT. Since these distributions would be subject to limited source taxation, it would be appropriate to apply the credit

method to them. Conversely, distributions to large investors in a REIT, which would be subjected to source taxation without any treaty limit, should be covered by the exemption method if this is the method generally applied by a State (see also paragraph 41 above as regards the risks of double exemption of capital gains).

Application of the participation exemption / EU parent-subsidiary directive

44. Another issue is to what extent domestic rules on participation exemption and, more generally, the EU parent-subsidiary directive, would allow a State to tax a distribution to a large investor at a rate commensurate with the rate applicable to income from immovable property rather than at the rate applicable to a dividend to a large corporate shareholder. To some extent, the answer to that question could depend on the legal structure of the REIT and on whether or not the REIT and the investor could be considered to be tax-exempt.

Distributions to tax-exempts (pension funds)

45. Paragraph 69 of the Commentary on Article 18 (Pensions) includes an alternative provision that States may use to extend the domestic exemption of income derived by domestic pension funds to income derived by pension funds established in another State. That provision allows States to achieve greater neutrality with respect to the location of capital.

46. The Committee concluded that, as a matter of policy, distributions from a portfolio investment in a REIT should be treated like other investment income of a pension fund and noted that, as drafted, the alternative provision would appropriately cover that type of income. States contemplating the inclusion of such a provision should, however, consider the policy issue of whether the provision should apply to distributions to a pension fund that holds more than a portfolio investment in a domestic REIT (*i.e.* 10% or more).

Potential for base erosion and access to interest treatment

47. The OECD Model Convention provides that source taxation on interest payments may not exceed 10% but tax treaties often provide that interest payments will not be taxable in the source country. Many countries have enacted thin capitalisation rules to prevent the erosion of their tax base through interest payments that would be deductible from the tax base without being subject to source taxation.

48. The Committee examined whether the tax treatment of REITs could give rise to a similar base erosion concern. One example that was discussed was that of a REIT that would offer foreign investors the possibility to invest in a combined equity and debt instrument, with the debt component representing

almost all the value of the investment. In such a case, a very large part of the REIT profits could effectively be distributed to the investors as interest payments subject to no source taxation.

49. It could be argued that the interest payments would be subject to residence taxation in the hands of the investors, although this may not provide a satisfactory response to the source country concern, particularly in the case of tax-exempt or low-tax foreign investors. Also, various design features of a REIT regime may prevent or reduce this risk of base erosion. For example, the REIT regulatory framework or market preferences may make it difficult to highly leverage the REIT and the REIT may be prevented from issuing participating debt instruments.

50. Whilst it was noted that at least one country had introduced a thin-capitalization rule in its REIT regime to address the base-erosion concern, the Committee concluded that this issue was not specific to REITs and that no REIT-specific recommendation should be made to deal with it.

Investment by a foreign REIT

51. The Committee finally examined whether and how the above approach for the tax treaty treatment of distributions to foreign investors in a domestic REIT should be extended to a foreign REIT deriving income from domestic immovable property and to a foreign REIT investing in a domestic REIT.

52. The industry participants in the Group that prepared the first draft of this report stressed that in order to achieve a more efficient market for portfolio investment in immovable property, REITs established in one country need to be able to invest in foreign countries' immovable property and in REITs established in other countries. Therefore, the tax obstacles that hinder such cross-border investments should be addressed. They also indicated that the adoption of solutions that would avoid the need for the arrangements that are currently used to avoid multiple taxation of such cross-border REIT investments would be beneficial for both REITs and tax administrations.

53. It was suggested that EU law may require a country to extend its domestic REIT regime to REITs established in other EU States. This is obviously an important question for EU Member States and it is hoped that it will be addressed as part of the on-going work on taxation and REITs that a Working Group of the European Commission and Member States of the Community is carrying on.

54. This led the Committee to examine whether treaty provisions based on paragraph 3 of Article 24 of the OECD Model Tax Convention could be interpreted to require a country to extend its domestic REIT regime to a foreign REIT holding domestic immovable property through a permanent establishment. The Committee concluded that such an interpretation should

MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

be rejected and noted that extending the benefit of an exemption granted to a domestic REIT (the distributions from which would be taxed) to such a permanent establishment would result in an undue advantage for the foreign REIT since the distributions of that REIT could not similarly be taxed, in particular because of paragraph 5 of Article 10, by the State where the permanent establishment is located. As explained in paragraph 20 of the Commentary on Article 24:

> …the wording of the first sentence of paragraph 3 must be interpreted in the sense that it does not constitute discrimination to tax non-resident persons differently, for practical reasons, from resident persons, as long as this does not result in more burdensome taxation for the former than for the latter. In the negative form in which the provision concerned has been framed, it is the result alone which counts, it being permissible to adapt the mode of taxation to the particular circumstances in which the taxation is levied.

55. As a matter of tax policy, and putting aside practical considerations regarding tax administration and tax collection, the majority of the members of the Group that produced the first draft of this report considered that if an equivalent tax regime could be applied to a foreign REIT, there would be no reason for a country to treat foreign REITs differently from domestic REITs with respect to investment in domestic property. This, however, would require that country to be able to levy and collect an equivalent amount of tax on distributions of domestic income by a foreign REIT as it would levy and collect on distributions of such income by a domestic REIT that would have a similar investor base and similar levels of distributions made at similar intervals, considering that the policy rationale underlying the tax exemption for domestic REITs is that tax will be collected on the income of the REIT at the investor's level rather than at the entity's level.

56. A State wishing to extend the tax benefits of its domestic REIT regime to foreign REITs would, however, face various legal, administrative and compliance issues. These would primarily include:

- the difficulty of identifying which part of the distribution by a foreign REIT would correspond to domestic income;
- the general tax treaty prohibition, found in provisions similar to paragraph 5 of Article 10 of the OECD Model, against taxing distributions by a company resident in another State;
- the practical difficulty of identifying a foreign REIT's large investors and investors who are not entitled to treaty benefits; particularly where the foreign REIT's investors include other REITs;

- difficulties related to the extension of double tax relief on a distribution received by an investor in one REIT to take account of the tax levied on a previous distribution received by that REIT.

57. The extension of a domestic REIT regime to foreign REITs would therefore require a trade-off between the basic policy objective of ensuring an equivalent tax treatment and the need to take account of the above issues. The Committee examined various approaches that could be considered for that purpose, including:

- levying source tax at the time that the foreign REIT that has invested domestically makes a distribution,
- deeming the foreign REIT to be a domestic REIT for treaty purposes, and
- deeming the foreign REIT to have a permanent establishment.

These possible approaches and some issues that they raise are discussed in more detail in the Annex.

MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

ANNEX

TECHNICAL ANALYSIS OF VARIOUS APPROACHES PUT FORWARD FOR EXTENDING DOMESTIC REIT REGIMES TO FOREIGN REITS

1. As indicated in paragraph 57 of the note, the Committee examined various approaches that could be considered for the purposes of extending a domestic REIT regime to foreign REITS. The following describes some of these approaches and presents some of the issues that were identified with respect to them.

Subsequent withholding tax

2. One approach would be for a State to exempt from domestic tax the income from domestic immovable property derived by a foreign REIT recognized as similar to a domestic REIT, or a distribution from a domestic REIT to such a foreign REIT, but to impose a withholding tax on the subsequent distributions by the foreign REIT to its own interest-holders.

3. Under that approach, the tax on such subsequent distributions by the foreign REIT would include both the tax of the State in which the foreign REIT has been established and that of the State in which the foreign REIT invested (either directly in domestic immovable property or in a domestic REIT).

4. Whilst that approach would primarily be implemented through domestic law changes, it may also require a change to tax treaties in order to avoid the prohibition, found in paragraph 5 of Article 10, against taxing distributions by foreign companies (see below).

Deeming the foreign REIT to be a domestic REIT for tax treaty purposes

5. Another approach would be to design treaty rules that would have the effect of deeming immovable property income derived from a State by a foreign REIT recognized as similar to a domestic REIT, as well as a distribution from a domestic REIT to such a foreign REIT, to be the income of a distinct company resident of that State that qualifies as a REIT in that State. That income, or a percentage thereof, would also be deemed to be distributed at regular intervals (such as annually) so as to trigger the application of source taxation rights under Article 10.

R (23)

Deeming the foreign REIT to have a permanent establishment

6. A third approach would be to design treaty rules that would deem a foreign REIT that holds immovable property in a State, or that holds an interest in a domestic REIT in such State, to have a permanent establishment in that State to which the income from such immovable property or

distributions from such domestic REIT would be attributable. These rules would also deem a distribution of the income of that permanent establishment to its head office and would allow the source State to tax this deemed distribution.

Application of these approaches to foreign REITs investing directly in domestic immovable property

7. As regards the income from a direct investment by a foreign REIT in immovable property of a given State, the three approaches described above would ensure that, as would be the case for income derived by a domestic REIT, the distributed domestic income of the foreign REIT is not taxed by that State at the time of its realisation by the foreign REIT.

8. A first issue that would arise under all these approaches is the determination of the rate of tax at which an actual distribution by the foreign REIT (under the first approach) or a deemed distribution (under the second and third approaches) would be taxable by the source State. The foreign REIT might have large and small investors; also, these investors might be residents of the State where the REIT is established, of the State where the immovable property is located or of third States. In order to apply to the investors in the foreign REIT an approach equivalent to the one put forward in this note as regards investors in a domestic REIT, one possibility would be to adjust the tax rate by looking through the investor REIT to determine the indirect ownership percentages of investors in that REIT. Thus, if all the investors in the foreign REIT were small investors that are residents of the State where the REIT is established, the withholding tax on the distribution to the investor REIT would be imposed at the lower portfolio dividend rate applicable to small investors. If the foreign REIT had other investors not entitled to that lower rate, the withholding tax on the distribution to the investor REIT would be imposed at a blended rate based on the proportionate interests held indirectly by the various categories of investors. For this purpose, it was suggested that the determination of whether the foreign REIT has large investors could be based on filings under rules requiring public disclosure of ownership by large investors. Such a look-through approach, however, would raise considerable administrative and compliance difficulties. The Committee noted that some of these difficulties are currently being examined by the Informal Consultative Group on Collective Investment Vehicles with a view to addressing these issues in a broader context.

9. The fact that the distributions by the foreign REIT will not come exclusively from the income derived from immovable property in the source State creates an additional issue with respect to the first approach. Since, under that approach, tax would be imposed on the actual distribution by the foreign REIT, it would be necessary to identify which part of that distribution

can reasonably be attributed to the income derived from the source State. Also, since losses realised outside the source State could reduce or eliminate actual distributions by the foreign REIT in a case where substantial income is derived from the source State, States would have to decide either to accept that result or to introduce rules deeming a distribution of the source-State income to have been made in such a case.

10. The second and third approaches would avoid these issues by taxing deemed distributions of the income arising from the source State instead of actual distributions by the foreign REIT. By doing so, however, these approaches could be seen as maintaining a significant difference between the tax treatment of domestic REITs and foreign REITs. Also, these approaches could create difficulties as regards the elimination of double taxation in the State of residence of the investor, which would tax the actual distributions. Additional rules might therefore be needed to ensure that relief of double taxation is granted under these approaches.

11. Under paragraph 5 of Article 10 of the OECD Model Tax Convention, a State is prevented from taxing distributions by a company resident in the other Contracting State. Since the first approach would have the practical effect of taxing the distributions by a foreign REIT, an exception to that treaty rule would seem to be required. A similar exception may also be required for the third approach because that approach might be considered to result in the taxation of the undistributed profits of the foreign REIT to the extent that it deems a distribution of income by the deemed permanent establishment to the head office of the foreign REIT. Since the second approach would deem a distribution to be made by a resident company, however, it would not require such an exception.

12. A related issue that could arise under the first approach, but which would probably be avoided under the second and third approaches, would be the practical implementation of the taxation of the distributions by the foreign REIT. If the State of residence of the foreign REIT were required to administer the tax levied by the State of source, it may be put in the difficult position of having to apply a withholding tax agreed to between the State of source and a third State where some of the foreign REIT's investors might be residing.

13. In order for any of these three approaches to be effective, the treaty rules that would be designed to implement them would need to be associated with corresponding domestic law provisions. Whilst treaty rules would seem sufficient to ensure that taxation is not levied by the source State upon the realisation of income from domestic investment by a foreign REIT, in most countries changes to domestic rules would be required in order to impose tax on the actual or deemed distributions by the foreign REIT.

Application of these approaches to foreign REITs investing in domestic REITs

14. The application of the approach put forward in this note for the tax treaty treatment of foreign investors in a domestic REIT to a foreign REIT that invests in a domestic REIT raises similar issues as those examined above as regards direct investment by a foreign REIT in domestic immovable property.

15. One difference, however, concerns the determination of the rate applicable to the actual distribution by the foreign REIT (under the first approach) or the deemed distribution (under the second and third approaches). Since the foreign REIT may itself qualify as a small investor in the domestic REIT, the determination of the treaty rate that should apply to such distributions requires a different analysis:

- If the foreign REIT qualifies as a small investor in the domestic REIT, one could consider that the foreign REIT should be entitled to the reduced rate of dividend withholding tax applicable to small investors. Some countries, however, might be reluctant to follow that approach where the foreign REIT is not considered to be a resident entitled to treaty benefits, where there are third-country investors in the foreign REIT or where it would be possible for foreign investors to divide a large investment in a domestic REIT through a number of foreign REITs each qualifying as a small investor in the domestic REIT (if it is not possible to prevent this through the approaches discussed in paragraph 33 of the note).
- If the foreign REIT is a large investor in the domestic REIT, the reduced rate of dividend withholding tax applicable to small investors nevertheless could be applied if the State considers that administrative and compliance difficulties do not justify trying to collect the extra tax that would be payable by large investors or third-country small investors in the foreign REIT and furthermore considers that REITs typically are not a vehicle that would lend itself to investors seeking inappropriately to obtain treaty benefits.
- A country, however, may be reluctant to apply the reduced rate applicable to small investors if the foreign REIT itself had large investors. The look-through approach discussed in paragraph 8 above could be used to overcome that difficulty by looking through the investor base of the foreign REIT in order to determine the proportion of large investors (and, possibly, of third country investors).

EXECUTIVE SUMMARY

This Report is a modified version of the Report "Granting of Treaty Benefits with Respect to the Income of Collective Investment Vehicles" of the Informal Consultative Group on the Taxation of Collective Investment Vehicles and Procedures for Tax Relief for Cross-Border Investors (ICG) which was released on 12 January 2009. In that original Report, the ICG addressed the legal and policy issues specific to collective investment vehicles ("CIVs") and formulated a comprehensive set of recommendations addressing the issues presented by CIVs in the cross-border context.

The ICG invited the OECD Committee on Fiscal Affairs (CFA) to refer these recommendations to its Working Party 1 (WP1) on Tax Conventions and Related Questions (the CFA subsidiary body responsible for changes to the OECD Model Tax Convention) for further consideration. This Report is the result of the subsequent work on these recommendations. The main conclusions and recommendations of the Report are similar to those in the ICG Report, with some modifications that reflect the varied experiences of the delegates. Like the ICG Report, this Report therefore analyses the technical questions of whether a CIV should be considered a "person", a "resident of a Contracting State" and the "beneficial owner" of the income it receives under treaties that, like the OECD Model Tax Convention, do not include a specific provision dealing with CIVs (*i.e.* the vast majority of existing treaties). Further, the Report includes proposed changes to the Commentary on the Model Tax Convention to reflect the conclusions of the Working Party with respect to these issues. Although the Report includes an analysis of the application of the "beneficial owner" requirement to the specific case of CIVs, the conclusions with respect to CIVs should not be seen as pre-judging WP1's continuing work on the "beneficial owner" requirement more generally.

Although these proposed changes to the Commentary will clarify the treatment of CIVs, it is clear that at least some forms of CIVs in some countries will not meet the requirements to claim treaty benefits on their own behalf. Accordingly, the Report also considers the appropriate treatment of such CIVs under both existing treaties and future treaties.

With respect to existing treaties, the Report concludes that, if a CIV is not entitled to claim benefits in its own right, its investors should in principle be able to claim treaty benefits. The Report reflects different views regarding whether such a right should be limited to investors who are residents of the Contracting State in which the CIV is organised, or whether that right should be extended to treaty-eligible residents of third States. In any event, administrative difficulties in many cases effectively prevent individual claims

by investors. Accordingly, the Report concludes that countries should adopt procedures to allow a CIV to make the claim on behalf of investors.

With respect to future treaties, the Report endorses the ICG recommendation that the Commentary on Article 1 of the Model Tax Convention should be expanded to include a number of optional provisions for countries to consider in their future treaty negotiations. Inclusion of one or more of these provisions in bilateral treaties would provide certainty to CIVs, investors and intermediaries. The favoured approach for such a provision would treat a CIV as a resident of a Contracting State and the beneficial owner of its income, rather than adopting a full look-through approach. Because different views were expressed on the issue of whether treaty-eligible residents of third countries should be taken into account in determining the extent to which the income of a CIV should be entitled to treaty benefits, the proposed Commentary includes alternative provisions that adopt different approaches with respect to the treatment of treaty-eligible residents of third countries. The proposed Commentary also includes an alternative provision that would adopt a full look-through approach. The look-through approach would be appropriate in cases where the investors, such as pension funds, would have been eligible for a lower, or zero, rate of withholding had they invested directly in the underlying securities.

The Report also addresses several ancillary issues, including the procedures that could be adopted to determine the proportion of treaty-eligible investors under either existing treaties or a future treaty provision. In addition, the Report discusses a possible provision that would allow an investor in a CIV to claim foreign tax credits for withholding taxes suffered at the level of the CIV, although it does not include any changes to the Commentary on the Model Tax Convention relating to this issue.

I. INTRODUCTION

1. Portfolio investors in securities frequently make and hold those investments by pooling their funds with other investors in a collective investment vehicle ("CIV"), rather than investing directly. This occurs because of the economic efficiency and other advantages CIVs provide. There are several different forms CIVs take, depending on the country in which they are established (*e.g.* companies, trusts, contractual arrangements). The growth in investments held through CIVs has been very substantial in recent years and is expected to continue. Most countries have dealt with the domestic tax issues arising from groups of small investors who pool their funds in CIVs. In many cases, this is reflected in legislation that sets out specific tax treatment that may have significant conditions. The primary result is that most countries now have a tax system that provides for neutrality between direct

investments and investments through a CIV, at least when the investors, the CIV, and the investment are all located in the same country.

2. One of the primary purposes of tax treaties is to reduce tax barriers to cross-border trade and investment. Treaties do this by allocating taxing jurisdiction over a person's income between that person's country of residence and the country of source of the income, in order to avoid double taxation. For example, treaties typically limit a source State's taxing rights over dividends, interest and capital gains derived by a resident of another State from holding investment securities in the source State. At the same time, countries generally do not want those tax treaties to create instances of unanticipated double non-taxation. In particular, countries may want to ensure, either through explicit provisions in their double tax treaties, or by applying anti-abuse principles in their domestic laws, that only residents of the treaty partner are entitled to treaty benefits. With these objectives in mind, an increasing number of countries have begun specifically addressing at least some issues presented by CIVs in their bilateral tax treaties. These provisions, however, are by nature bilateral and may therefore not address the frequent situation where the investors, the investment and the CIV are located in three or more different countries.

3. In 2006, the Committee on Fiscal Affairs (the "Committee") established the Informal Consultative Group on the Taxation of Collective Investment Vehicles and Procedures for Tax Relief for Cross-Border Investors (the "ICG"). In January 2009, the Committee approved the release for public comment of the ICG's report with respect to the legal and policy issues relating specifically to CIVs (*i.e.* the extent to which either the CIVs or their investors are entitled to treaty benefits) as well as a second report by the ICG on "best practices" regarding procedures for making and granting claims for treaty benefits for intermediated structures more generally. This Report, which adopts the ICG's report with some modifications, focuses exclusively on the legal and policy issues relating to CIVs.

4. For purposes of this Report, the term "CIV" is limited to funds that are widely-held, hold a diversified portfolio of securities and are subject to investor-protection regulation in the country in which they are established. The term would include "master" and "feeder" funds that are part of "funds of funds" structures where the master fund holds a diversified portfolio of investments on behalf of the feeder funds that are themselves widely held. "Intermediated structures" relates to the holding of securities, including interests in CIVs, through layers of financial intermediaries. However, issues of treaty entitlement with respect to investments through private equity funds, hedge funds or trusts or other entities that do not fall within the definition of CIV set out in this paragraph were not considered during the preparation of this Report.

5. Section II of this Report provides background regarding the benefits of CIVs and the structure of the industry. Section III discusses the application of current treaty rules to CIVs under treaties that, like the Model Tax Convention, do not include a specific provision dealing with CIVs. Section IV describes certain considerations that countries that are negotiating new treaties may want to take into account when determining whether the results that otherwise would apply to CIVs established in their jurisdictions under the analysis of Section III are appropriate or whether they should be modified by adopting new provisions addressing CIVs. Section V consists of additions to the Commentary on Article 1 incorporating such possible new provisions.

II. BACKGROUND

2.1 Benefits of investing through CIVs

6. Nearly US$20 trillion currently is invested through CIVs worldwide.[1] This number can only be expected to grow because of the numerous advantages provided to small investors who invest through CIVs.

7. A small investor who tried to by-pass CIVs and other intermediaries and invest directly would incur substantial costs. Finance theory instructs the investor to diversify his risks between equity and debt securities, real estate, and other assets. Now investors are urged to diversify across international markets as well, in order to hedge currency and market risk. In addition, they are supposed to change their allocations of assets over time to ensure their risk profile matches their age and timeline to retirement, etc. A small investor who tried to satisfy all of those demands through directing his own portfolio would spend substantial time and incur significant transaction costs that might be out of all proportion to the actual amount invested.

8. CIVs allow small investors to gain the benefits of economies of scale even if they have relatively little invested. They provide access to a number of markets that might be closed to the small investor. These benefits are provided in a form that is highly liquid, as securities issued by a CIV may be redeemed on a frequent (daily, weekly or monthly) basis at net asset value ("NAV") or can be transferred with minimal restrictions. CIVs also allow for highly efficient reinvestment of income. Distributions on portfolio securities held by the CIV can be reinvested by the CIV. It would be difficult for individual investors to reinvest small distributions on an efficient basis.

9. In addition, investors in CIVs benefit from the market experience and insights of professional money managers. The cost of these money managers is spread over all of the CIV's investors. Moreover, a small investor who buys interests in a CIV can instantly achieve the benefits of diversification that otherwise would require much greater investment. For example, an employee

who puts $100 each month into a CIV that is invested in a broad market index (either directly, or through his employer's retirement plan or a personal savings plan) has diversified his risk of loss as much as if he had bought a share of stock in each company in the index, but at a substantially lower cost than if he had bought the individual stocks.

10. Governments have long recognised the importance of CIVs as a complement to other savings vehicles in terms of facilitating retirement security. In many countries, participants in defined contribution retirement plans invest primarily in CIVs. Because CIVs allow small investments, they are ideally suited for such periodic savings plans. They are highly liquid, allowing withdrawals as needed by retirees. With ageing populations in many countries, CIVs will become increasingly important.

2.2 Structure of the CIV industry

11. CIVs typically are organised by financial services firms (including securities, banking and insurance groups). The organising firm often is referred to as the CIV's "manager". It is not uncommon for the CIV manager to have hundreds or thousands of employees managing a number of CIVs and providing investment advice for other types of investors. The manager provides services such as portfolio management (advisory) and transfer agency (shareholder recordkeeping). In some cases, the manager may select other firms to sub-advise part, or all, of the portfolio.[2] The manager also may decide to hire unaffiliated parties to perform other services, such as legal and audit services, tax consulting, custodial services and others.

12. With respect to the portfolio, the adviser decides which securities the CIV will hold, and when they will be bought or sold. The adviser thus will research securities and anticipate market movements. Even in the case of "index funds" (*i.e.* funds the aim of which is to match the movements of an index of a specific financial market), the adviser must decide whether the CIV will hold all of the securities in the index, or whether some smaller sample of the relevant securities will provide essentially the same return as the index, but at a lower cost. The adviser must also ensure that the CIV's portfolio is consistent with applicable regulations. Typically, there will be regulatory requirements relating to concentration of investments, restricting a CIV's ability to acquire a controlling interest in a company, prohibiting or restricting certain types of investments, and limiting the use of leverage by the CIV.

13. Investments by the CIV could be domestic or international. International diversification of investment portfolios is becoming more significant. For example, over 25% of all equity assets held by US CIVs are issued by non-US companies.[3] About 30% of the assets of U.K. CIVs are invested outside the United Kingdom.[4] More than one-third of the assets of Japanese CIVs are

foreign securities.[5] Assets of Luxembourg, Swiss and Irish funds are predominantly invested outside of their home market.[6] As more investments are made cross-border, the issue of CIVs' qualification for treaty benefits is becoming increasingly important.

14. Interests in the CIV are distributed through affiliated and/or unaffiliated firms. Typically, the CIV will have a distributor related to the manager. This distributor will enter into distribution arrangements with other firms that will distribute CIV shares or units. There are two distinct types of markets for CIVs – "domestic" and "global". In this context, the term refers to the location of the investors, not the investments.

15. In the case of the domestic CIV market, the CIV and essentially all of its investors are located in the same country. This situation may arise because of securities law restrictions on the public offering of non-domestic CIVs. In other cases, tax considerations applicable to non-domestic CIVs or to non-resident investors in a domestic CIV may make them uneconomic (*e.g.* US passive foreign investment company rules or local tax advantages). There also may be no identifiable reason, other than investors' preferences for the form of investment vehicle with which they are most familiar.

16. The global CIV market is one in which the CIV and a significant portion of its investors are located in different countries. The global CIV can be much more efficient – it can benefit from the economies of scale described above to a greater extent than smaller CIVs. Taken to its extreme, a manager would create a single CIV for each asset class or portfolio type. This may not be possible, for the reasons described in paragraph 15. However, regulators see the benefits of a smaller number of larger CIVs, and regulatory changes, such as the UCITS Directive within the European Union,[7] are designed to encourage global business.

17. Distribution of interests in the CIV is also highly regulated. Many jurisdictions require the delivery of a disclosure statement (*i.e.* prospectus), which may be reviewed by the regulator. Sales of interests in the CIV are effected through regulated entities that are subject to "know your customer" rules. However, there are a number of different distribution channels. Direct share purchases are effected between the ultimate investor and the CIV or its transfer agent/paying agent. However, in almost all markets, direct purchases (and holdings) are a small proportion of the investments in the CIV. Much more common are indirect share purchases through one or more intermediaries (*e.g.* securities firms, banks, insurance companies and independent financial advisers).

18. Interests in CIVs acquired through intermediaries often are registered at the CIV level through nominee/street name accounts. One reason for this is competitive – intermediaries view customers' identities as highly valuable

proprietary information. Another reason is efficiency – intermediaries aggregate their customers' purchases and sales each day and effect only a net purchase or a net sale each day in the nominee account. Whilst investments in a CIV are typically long-term, a CIV's shareholder base may change every day, as new shares are issued and existing shares are redeemed (or as shares trade on an exchange). When interests in the CIV are held through such nominee accounts, the CIV's manager may not be aware of changes in its underlying investors.

19. CIVs thus act as both issuers of securities and investors in securities. As a result, there may be layers of intermediaries both above the CIV (*i.e.* between the issuer of the security in which the CIV is invested and the CIV), and below the CIV (*i.e.* between the CIV and the beneficial owner of the interests in the CIV). In many cases, those intermediaries will not be located in the country in which the issuer is located and may not be located in the country in which the investor is located. Accordingly, CIVs present issues as regards what they can and should accept from other intermediaries in order to comply with their own withholding tax obligations, and what they can and should provide to withholding agents in order to claim the benefits of tax treaties. These issues have an important practical impact as they result in significant amounts of withholding taxes paid in excess of the amounts payable pursuant to tax treaties and in significant, sometimes deterrent, compliance costs involved in obtaining the applicable treaty relief.

20. Difficulties in claiming treaty benefits at the time payment is made, and delays in payment of refunds, reduce the return to any investor unless, in the case of a refund, it is accompanied by interest to compensate for the delay. However, there are added dimensions to such difficulties and delays when the investor is a CIV. Investors in CIVs may change daily, making it extremely difficult, if not impossible, to track particular income streams to particular investors. For example, an investor could hold shares in a CIV on 15 June, when the CIV receives a dividend. If the investor redeems or sells those shares on 1 July, the investor generally will recognise a gain or loss. To the extent that the CIV is required to allocate income to particular investors, the remaining or future investors in the CIV generally would be credited with the dividend, even if they did not own shares in the CIV at the time the dividend was received. The difficulty in tracing of course also is compounded by the fact that interests in CIVs frequently are held through layers of intermediaries. In those cases, the CIV's records will show the names of the intermediaries through which the investors hold their interests in the CIV, rather than the names of the investors themselves.

21. CIVs typically calculate NAV every day because it is the basis for subscriptions and redemptions. In calculating the NAV, the CIV must take into account amounts expected to be received, including any withholding tax

benefits provided by treaty. If the withholding tax benefits ultimately obtained by the CIV do not correspond to its original assumptions about the amount and timing of such withholding tax benefits, there will be a discrepancy between the real asset value and the NAV used by investors who have purchased, sold or redeemed their interests in the CIV in the interim. Accordingly, CIVs require certainty regarding their qualification for treaty benefits. Unfortunately, for the reasons described in the following section, certainty is in short supply.

III. APPLICATION OF CURRENT TREATY RULES TO CIVS

3.1 Can a CIV claim the benefits of tax treaties on its own behalf?

22. The OECD Model Tax Convention on Income and on Capital (the "Model Convention"), which is the basis on which about 3,000 bilateral tax treaties worldwide have been negotiated, contains general provisions addressing each Contracting State's taxing rights over income derived by a person resident in the other Contracting State, but it does not have any specific provisions relating to CIVs. In the absence of specific rules applicable to CIVs, a CIV will be entitled to the benefits of a convention in its own right only if it is a person that is a resident of a Contracting State. It may also have to be the beneficial owner of the relevant income. In practice, issues have arisen with respect to each of these requirements, which are addressed in turn below.

a) Is a CIV a "person"?

23. The determination of whether a CIV is a person begins with the legal structure of the CIV. CIVs take different legal forms in OECD member countries. In Canada and the United States, both companies and trusts are commonly used. In Australia, New Zealand and Japan, the trust is the predominant form; this also used to be the case in the United Kingdom, but that country has recently introduced corporate vehicles. In many European countries, both joint ownership vehicles (such as *fonds communs de placement*) and companies (such as *sociétés d'investissement à capital variable*) are commonly used. In all of these countries, of course, there are also forms of custodianship arrangements that are purely contractual in nature.

24. Paragraph 2 of the Commentary on Article 3 states that the definition of the term "person" that is found in the Model Convention is not exhaustive and should be given a very wide sense. That paragraph also provides the example of a foundation (*fondation*, *Stiftung*) as an arrangement that may fall within the meaning of the term "person" because it is treated as a body corporate for tax purposes.

25. Applying this guidance to the case of CIVs, a CIV structured as a company clearly would constitute a person. However, in the absence of specific provisions, a CIV that is treated merely as a form of joint ownership, and not as a person, under the tax law of the State in which it is established clearly would not constitute a person for purposes of tax treaties.

26. The issue may be less clear in the case of a CIV that is structured as a trust. Under the domestic tax law of most common law countries, the trust, or the trustees acting collectively in their capacity as such, constitutes a taxpayer. Accordingly, failing to treat such a trust as a person would also prevent it from being treated as a resident despite the fact that, as a policy matter, it seems logical to treat it as a resident when the country in which it is established treats it as a taxpayer and a resident. The fact that the tax law of the country where the trust is established would treat it as a taxpayer would be indicative that the trust is a person for treaty purposes. In practice, it seems that few countries have denied benefits to CIVs in the form of trusts solely on the grounds that the trust is not a person. This may be because those countries in which trusts are common make it a point to resolve this question by modifying the definition of "person" to specifically include trusts. Because some countries, particularly civil law countries, may not recognise the concept of a trust in their domestic law, negotiators may want to continue the practice of including such modified definitions in future treaties.

b) Is a CIV a "resident of a Contracting State"?

27. The determination of whether a CIV that qualifies as a person is a resident of a Contracting State depends on the tax treatment of the CIV in the Contracting State in which it is established. The tax treatment of CIVs varies considerably from country to country, even though a consistent goal is to ensure that there is only one level of tax, at either the CIV or the investor level. Thus, the intent is to ensure neutrality between direct investments and investments through a CIV, at least when the investors, the CIV and the investment are all located in the same country.

28. In some States, a CIV established therein is treated as fiscally transparent ("flow-through"); that is, the holders of interests in the CIV are liable to tax on the income received by the CIV, rather than the CIV itself being liable to tax on such income. Other States regard the CIV to a greater or lesser degree as an entity interposed between investor and investments ("opaque"). In some States, a CIV is in principle subject to tax but is exempt if it fulfils certain criteria with regard to its activities, which may involve looking at its distribution practice, its sources of income, and sometimes its sectors of operation. More frequently, CIVs are subject to tax but the base for taxation is reduced, in a variety of different ways, by reference to distributions paid to

investors. Deductions for distributions will usually mean that no tax is in fact paid. Other States tax CIVs but at a special low or zero tax rate. Finally, some States tax CIVs fully but with integration at the investor level to avoid double taxation of the income of the CIV. The integration may take the form of exemption in the hands of the investor or imputation of the tax imposed at the level of the CIV.

29. Under the principles of paragraph 8.5 of the Commentary on Article 4, a CIV may be "liable to tax", and therefore a resident of a Contracting State, even if that State does not in fact impose any tax on the CIV. However, the mechanism by which neutrality is accomplished will affect the treaty analysis. A CIV that is transparent for tax purposes in the State in which it is established will not be treated as a resident because it is not liable to tax in that State, nor will a CIV that is totally and unconditionally exempt from income taxation (*e.g.* without regard to the type of income it receives or its distribution policy). However, a CIV that is treated as opaque in the Contracting State in which it is established will be treated as a resident of that Contracting State even if the specific items of income it receives are exempt from taxation, or if it receives a deduction for dividends paid to investors, or it is subject to a lower rate of tax on its income. This analysis would apply to any entity that has satisfied the "person" requirement. Accordingly, for purposes of the residence test, the legal form of the CIV is relevant only to the extent that it affects the taxation of the CIV in the Contracting State in which it is established. So, for example, with respect to those countries that, for tax purposes, treat all CIVs in the same manner, regardless of legal form, all CIVs established in that country should be treated as residents, or none of them should, for treaty purposes.

30. The preceding analysis is consistent with the interpretation of the term "liable to tax" that is found in paragraph 8.5 of the existing Commentary on Article 4 of the Model Convention. However, paragraph 8.6 of that Commentary notes that some countries would take the view that an entity that is exempt from tax would not be "liable to tax" within the meaning of Article 4. Accordingly, it would be prudent to address the issue of CIVs directly in bilateral negotiations if one of the countries adheres to the position described in paragraph 8.6.

c) Is a CIV the "beneficial owner" of the income it receives?

31. In a few cases, CIVs have been denied treaty benefits because the relevant source country has taken the position that a CIV can never be the beneficial owner of the income that it receives. Because the term "beneficial owner" is not defined in the Model, it ordinarily would be given the meaning that it has under the law of the State applying the Convention, unless the

context otherwise requires. Accordingly, a Contracting State might consider itself entitled to decide effectively the question with respect to CIVs investing in that State, even if the country of residence would take the opposite view. Because such a position would affect an entire, significant class of investors, it is particularly important to develop a broad consensus on this issue.

32. Those taking the position that a CIV can never be the beneficial owner of the income it receives generally take the view that, because of the relationship under local law of the investor and the CIV or its managers, ownership of an interest in a CIV is the equivalent of ownership of the underlying assets. However, the position of an investor in a CIV is significantly different from the position of an investor who owns the underlying assets directly. The function of a CIV is to allow a small investor to achieve investment goals that it cannot achieve on its own. An investor betters his position by joining with other investors, and in doing so, has invested in something substantially greater than his allocable share of the underlying assets. The investor has no right to the underlying assets. While the investor in the CIV has the right to receive an amount equal to the value of his allocable share of the underlying assets, this right is not the equivalent of receiving the assets as either a commercial or tax matter. Any shareholder in a publicly-traded company can receive the then-value of his allocable share of the corporation by selling his shares on the market. Selling on the market is also the way that an investor in an exchange-traded CIV realizes the value of his investment.

33. An investor who owned the underlying assets directly generally could direct the sale or purchase of particular securities. This is not possible with respect to the vehicles that fall within the definition of "CIV" in paragraph 4, which are widely-held, hold a diversified portfolio of securities and are subject to investor-protection regulation in the country in which they are established. In the case of such CIVs, it is the manager of the CIV that has discretionary powers to manage the assets on behalf of the holders of interests in the CIV. In general, managers exercise this authority within the parameters that they have set for themselves in the offering documents they use to gain subscribers to the CIV. Although they may have practical or legal obligations to distribute the CIV's income in order to qualify for preferential treatment, this obligation does not constrain their ability to vary investments.

34. In most countries, the investor's tax situation is substantially different than it would be if it owned the assets directly. For example, in most countries, an investor who redeems its shares in a CIV is taxed on a capital gain, not on its share of the income earned by the CIV. Accordingly, for the reasons described in paragraph 20, income from a particular asset generally cannot be traced to a particular investor, even in those countries that purport to treat the CIV as a transparent entity.

35. For these reasons, a widely-held CIV, as defined in paragraph 4, should be treated as the beneficial owner of the income it receives, so long as the managers of the CIV have discretionary powers to manage the assets on behalf of the holders of interests in the CIV and, of course, so long as it also meets the requirements that it be a "person" and a "resident" of the State in which it is established. This conclusion, however, relates only to those economic characteristics that are specific to a CIV. It does not suggest that a CIV is in a different or better position than other investors with respect to aspects of the beneficial ownership requirement that are unrelated to the CIV's status as such. For example, where an individual receiving an item of income in certain circumstances would not be considered as the beneficial owner of that income, a CIV receiving that income in the same circumstances could not be deemed to be the beneficial owner of the income.

3.2 If a CIV cannot claim benefits, is there any relief for the investors?

36. While application of the principles set out above will clarify that many CIVs are entitled to treaty benefits, other CIVs clearly will not so qualify. It therefore is necessary to consider the position of an investor in a CIV that is not able to claim benefits on its own behalf. If there were no way for an investor that is a resident of a State with which the source State has a tax treaty to claim treaty benefits, then the treaty would have failed in its purpose of eliminating double taxation. Investors who invest through a CIV would be put in a worse position than if they had invested directly. The risk of double taxation would also argue for allowing treaty benefits whether the investors were resident in the same State in which the CIV is established, or in a third State where they would be entitled to benefits under that State's tax treaty with the source State. An argument could be made, however, that allowing claims in respect of treaty-eligible investors located in third countries is inconsistent with the bilateral nature of the treaty process. In particular, there may not be a significant risk of double taxation if neither the CIV nor residents of third States currently are taxable on the income received by the CIV. This matter is further discussed in paragraphs 55 and 58 to 59.

37. In any event, administrative difficulties effectively prevent individual claims by CIVs' investors. Given the number of investments by a typical CIV, and the thousands of individual investors in the CIV, each individual claim for exemption (or refund of withheld taxes) would be for relatively small amounts. It is likely that very few, if any, individual investors would bother with such claims, particularly as avoiding such administrative burdens is one of the benefits of investing collectively. Moreover, for the reasons described in paragraph 20, investors may not be able to prove that they have paid the withholding taxes. These administrative difficulties likely would result in benefits going unclaimed in many cases. If such claims were made, however,

tax administrations would be overwhelmed by the sheer number of such small individual claims.

38. Accordingly, developing a system that would allow CIVs to make claims in respect of investors appears to be in the interests of both business and governments. Such a system could allow claims by CIVs with respect to existing treaties, in line with countries' views regarding the extent to which claims should be allowed with respect to treaty-eligible investors located in third countries. Some countries currently could allow such claims, including claims in respect of treaty-eligible residents of third countries, under their domestic law. For other countries, a mutual agreement would be useful or necessary.

39. Any approach that allows claims by a CIV on behalf of its investors would rely on the development of practical and reliable procedures for determining ownership of interests in CIVs and of securities held through other intermediated structures. Whilst it would be possible to require regular determinations, the costs of such determinations would be significantly higher, and compliance likely much lower, if the testing dates were determined after the fact. By contrast, if the date or dates were known in advance, the testing requirement could be built into automatic data collection systems. Under that system, information identifying the beneficial owner would be held by the intermediary with the direct relationship with the investor, rather than passed up the chain of intermediaries. However, information identifying the beneficial owners should be available to the source State upon demand.

40. However, there also may be situations where even such automatic data collection might not be necessary. This might be true, for example, where the CIV industry is largely domestic in nature. For example, governments may be willing to rely on the fact that the fund manager or sponsor restricted sales of interests in the CIV to specific countries for purposes of concluding that the investors are resident in such countries, although they may want to confirm that such sales restrictions are co-extensive with relevant tax criteria. Alternatively, a CIV could establish separate classes of interests for those investors entitled to treaty benefits and for those investors who are not. The CIV could then require distributors to restrict sales accordingly.

3.3 Relief from double taxation for income received by CIVs

41. Discussion of the problems faced by CIVs has tended to focus on the problem of qualifying for the reduced withholding rates provided by Articles 10 (Dividends) and, to a lesser extent, 11 (Interest), and therefore on claims for benefits that are directed to the source country. In fact, an equal or even greater tax loss may result from the fact that, in most cases, neither the CIV

nor the investor can claim foreign tax credits for the withholding taxes imposed by the source country after application of the treaty (*i.e.* 15% for portfolio dividends according to the Model Convention).

42. Because most of the income received by CIVs consists of portfolio dividends and interest, the income will be subject to withholding taxes in the country of source under treaties that follow the Model Convention. Accordingly, Article 23 (Relief from Double Taxation) of the Model Convention provides for the use of the credit method for such income, even for countries that use the exemption method as the primary means of relieving double taxation. However, a theoretical right to a foreign tax credit is irrelevant to an entity that has no residence State tax liability, which is the case with respect to most CIVs. Accordingly, if the CIV is treated as a resident, then the foreign tax credit is likely to go unused, unless there is a special treaty or domestic law provision that would allow the credit to flow through to the CIV's investors. Some countries do allow investors in a domestic CIV to claim the foreign tax credit, at least in some circumstances.

43. Alternatively, if the CIV is treated as transparent in the Contracting State in which it is established, then an investor in the CIV should be entitled to claim a foreign tax credit with respect to its proportionate share of the foreign withholding taxes paid on the income of the CIV. That should be relatively straightforward (*e.g.* under the domestic law of the CIV's State if not under Article 23 itself) if the investor is a resident of the same Contracting State in which the CIV is established. However, it could become more difficult, and may require specific legislation, if that Contracting State does not view the CIV as transparent but achieves integration in some other way, such as exempting income or providing a deduction for dividends paid. Some countries have taken a different approach, "refunding" the foreign withholding tax to the CIV (*i.e.* making a cash payment to the CIV); under that approach, relief is achieved from the double taxation that would otherwise arise if the investors are subject to tax in the Contracting State in which the CIV is established, whether because they are residents of that State or, if they are non-residents, because that State levies a withholding tax at the time the earnings of the CIV are distributed.

44. Of course, the situation may become even more difficult if the investor is located in a different State, and that third State does not view the CIV as transparent. In that case, that third State is unlikely to provide a foreign tax credit for withholding taxes imposed on income received by the CIV. Moreover, this problematic situation involves three different countries. In theory, the Contracting State in which the investor is resident should not apply its treaty (if any) with the Contracting State in which the income arises, because the first-mentioned Contracting State sees the CIV in a third State as the beneficial owner of the income. The treaty between the State in which the CIV

is established and the State in which the investor is a resident could solve the problem by requiring the State in which the investor is a resident to provide a foreign tax credit for any taxes withheld on payments to the CIV.

45. Such a provision could read as follows:

> [ ]. Where a resident of a Contracting State owns an interest or interests in a collective investment vehicle established in the other Contracting State, and that collective investment vehicle derives items of income that are subject to tax in a third State, the first-mentioned Contracting State shall allow as a deduction from the tax on the income of the resident of that Contracting State an amount equal to the tax paid in the third State. Such deduction shall not, however, exceed that part of the tax, as computed before the deduction is given, which is attributable to the income derived by that resident from its ownership interest in the collective investment vehicle, as determined under the laws of the first-mentioned Contracting State.

46. Some countries may be reluctant to include such a provision in a bilateral treaty because it would constitute a two-party, and therefore incomplete, solution to a multilateral problem. As a result, a Contracting State potentially would be providing relief for taxes paid to a third State without regard to whether that third State would provide reciprocal benefits. Moreover, it potentially could require the Contracting State in which the investor is a resident to provide a greater foreign tax credit than would have been granted if the investor had invested directly. (This situation could arise if the State in which the investor is resident had negotiated with the source State a lower withholding rate on the type of income than did the State in which the CIV is established.) Finally, it was noted that the proposed provision raises fundamental questions regarding when economic double taxation arises.

47. To date, investors have not expressed an interest in making such claims with respect to CIVs located in third countries and have not demanded the information that would be necessary to make such claims. However, it may be that other changes proposed in this Report could, if widely implemented, increase investors' interest in making such claims.

IV. POLICY ISSUES RAISED BY CURRENT TREATMENT OF CIVS

48. As noted above, the discussion and conclusions in Section III assume that the relevant tax treaties do not include any provisions specifically addressing the treatment of CIVs. Because the principles set out above are necessarily general, their application to a particular type of CIV might not be clear to the CIV, investors and intermediaries. Section III therefore does not

address the issue of whether the treaty entitlement of any particular type of CIV is appropriate or not. However, as noted above, clarity is critical for a CIV because it affects the calculation of its NAV, the basis for all purchases, sales and redemptions. For these reasons, some countries have begun to include in their tax treaties provisions that specifically address the treatment of CIVs. In some cases, the provisions merely confirm the treatment that otherwise would apply while in other cases that treatment is modified to achieve specific policy goals.

49. This section addresses the policy considerations that countries entering into new treaties or modifying existing treaties may want to consider in determining how to treat the specific CIVs that are common in the two Contracting States. In some cases, the Contracting States might provide a single treatment that would apply to all of the forms of CIV in common use in the two countries. However, given the continuing proliferation of new forms of CIVs, it seems just as likely that the policy considerations discussed in this section will suggest that CIVs in the two Contracting States, or even within the same Contracting State, should be treated differently. At the same time, negotiators will want to keep in mind that some countries may have difficulties with a treaty providing more than one treatment for a single type of legal entity.

4.1 Potential for differential treatment of economically similar CIVs

50. The discussion in Section III demonstrates that there could be significant differences in the treatment of CIVs that take different legal forms and are subject to different tax regimes. This is true even though the goal of all of the systems is, to the extent possible, to ensure neutrality between direct investment and investment through CIVs. Such differential treatment could be seen as violating the general policy goal of treating economically similar structures similarly. Moreover, it could in many cases result in CIVs in one Contracting State qualifying for treaty benefits while those in the other Contracting State fail to so qualify, thus possibly violating the implicit assumption of reciprocity in bilateral tax treaties. Such unbalanced situations frequently have proven to be, not surprisingly, unstable. It is politically difficult for a country to provide benefits to CIVs established in another country when that other country does not provide benefits to CIVs located in the first country. That may increase the pressure on governments to deny claims for treaty benefits made by CIVs, undermining one of the primary goals of the tax treaty – to eliminate barriers to cross-border investment.

51. On the other hand, the differences in legal form and tax treatment in the two Contracting States may mean that it is appropriate to treat CIVs in the two States differently. In comparing the taxation of CIVs in the two States, taxation in the source State and at the investor level (taking into account the treatment

of both resident and non-resident investors) should be considered, not just the taxation of the CIV itself. The goal is to achieve neutrality between a direct investment and an investment through a CIV in the international context, just as the goal of most domestic provisions addressing the treatment of CIVs is to achieve such neutrality in the wholly domestic context. Developing practical solutions that ensure that the CIVs that are common in each jurisdiction have access to treaty benefits, even if on different terms, is likely to be more beneficial for both countries in the long run.

4.2 Potential for treaty shopping through CIVs

52. Some countries are also concerned about the prospect that a CIV could be treated as meeting the technical requirements for treaty benefits, and thus claim benefits in its own right, or at least without regard to the nature of the CIV's investors. They argue that a CIV, which generally is not subject to substantial taxation in the country in which it is organised, could easily serve as a vehicle for treaty shopping. Accordingly, it may be appropriate to restrict benefits that might otherwise be available to such a CIV, either through generally applicable anti-abuse or anti-treaty shopping rules or through a specific provision dealing with CIVs.

53. Again, in deciding on the appropriate approach, negotiators will want to consider the economic characteristics of the various types of CIVs that are prevalent in each of the Contracting States. For example, a CIV that is not subject to any taxation in the State in which it is established may present more of a danger of treaty shopping than a scenario in which the CIV itself is subject to an entity-level tax or where distributions to non-resident investors are subject to withholding tax.

54. A number of countries have dealt with the possibility of treaty shopping by adopting general provisions such as those mentioned in paragraphs 13 to 21.4 of the Commentary on Article 1 of the Model Convention. Some of these provisions are quite flexible and, in some treaties, such provisions apply to all claims for treaty benefits by any person. In others, there are no general anti-treaty shopping rules, but there may be specific ones that apply to CIVs. Still others may include a general anti-treaty shopping provision but apply stricter standards to CIVs. Negotiators developing a specific provision addressing the treatment of CIVs will also want to consider the effect of, and co-ordinate the provision with, any general anti-treaty shopping provision included in the treaty.

55. In the case of CIVs, an anti-treaty shopping provision generally would seek to determine whether a CIV is being used for treaty shopping by determining whether the owners, or a specific proportion of the owners, of interests in the CIV are residents of the Contracting State in which the CIV is

organised or, in some cases, whether the owners of interests in the CIV would have been entitled to equivalent benefits had they invested directly. The latter approach would help to ensure that investors who would have been entitled to benefits with respect to income derived from the source State had they received the income directly are not put in a worse position by investing through a CIV located in a third country. The approach thus serves the goals of neutrality as between direct investments and investments through a CIV. It also decreases the risk of double taxation as between the source State and the State of residence of the investor, to the extent that there is a tax treaty between them. It is beneficial for investors, particularly those from small countries, who will consequently enjoy a greater choice of investment vehicles. It also increases economies of scale, which are a primary economic benefit of investing through CIVs. Finally, adopting this approach substantially simplifies compliance procedures. Compliance procedures could be greatly simplified, because in many cases, nearly all of a CIV's investors will be "equivalent beneficiaries", given the extent of bilateral treaty coverage and the fact that rates in those treaties are nearly always 10-15% on portfolio dividends. On the other hand, some countries have expressed concern that taking into account residents of countries other than the source country and the country in which the CIV is established changes the bilateral nature of tax treaties.

56. Such a provision could be structured in various ways. The simplest would provide a binary application; an entity should either receive 1) full treaty benefits if the requirements for benefits are satisfied, or 2) no treaty benefits if the requirements are not satisfied. This is the standard approach under many anti-treaty shopping provisions. However, that approach would create a pure "cliff", which effectively would deny benefits to investors who otherwise would be entitled to treaty benefits. For that reason, those countries that have developed provisions to specifically address the treatment of CIVs generally have allowed a CIV to make claims in proportion to its "good" ownership, whether defined to include only residents of the same State or other treaty-entitled investors as well. Procedures could be further simplified, without significantly increasing the risk of treaty shopping, by providing that, once the CIV has passed some threshold of "good" ownership, the CIV would be entitled to benefits with respect to 100% of the income it receives. This dual approach would avoid the "cliff" effect described above. On the other hand, the "cliff" effect applies equally above the threshold, in that some investors who might not have been entitled to benefits nevertheless would benefit. This might argue for the adoption of a high threshold. A higher threshold might also be justified if a broader class of investors, such as all treaty-entitled investors, were treated as "good" owners. Because of these variables, the choice of threshold is best left to bilateral negotiations.

57. An alternative approach, which has been adopted in a number of treaties that include general anti-treaty shopping provisions, would be to provide that a CIV that is publicly traded in the Contracting State in which it is established will be entitled to treaty benefits without regard to the residence of its investors. This provision has been justified on the basis that a publicly-traded CIV cannot be used effectively for treaty shopping because the shareholders or unitholders of such a CIV cannot individually exercise control over it.

4.3 Potential deferral of income

58. Some source States may be concerned about the potential deferral of taxation that could arise with respect to a CIV that is subject to no or low taxation and that accumulates its income rather than distributing it on a current basis. Their view is that benefits to the CIV should be limited to the proportion of the CIV's investors who are currently taxable on their share of the income of the CIV, similar to the approach taken with respect to partnerships. Because such an approach would be difficult to apply to widely-held CIVs in practice, for the reasons described in paragraph 20 above, countries that are concerned about the possibility of deferral may wish to negotiate provisions that extend benefits only to those CIVs that are required to distribute earnings currently.

59. Other States have less concern about the potential for deferral. They take the view that, even if the investor is not taxed currently on the income received by the CIV, it will be taxed eventually, either on the distribution, or on any capital gains if it sells its interest in the CIV before the CIV distributes the income. Those countries may wish to negotiate provisions that grant benefits to CIVs even if they are not obliged to distribute their income on a current basis. Moreover, in many countries, the tax rate with respect to investment income is not significantly higher than the 10-15% withholding rate on dividends, so there would be little if any residence-country tax deferral to be achieved by earning such income through an investment fund rather than directly. Others view the risk of deferral in these circumstances as an issue primarily of concern to the State of which the investors are resident. In fact, many countries have taken steps to ensure the current taxation of investment income earned by their residents through investment funds, regardless of whether the funds accumulate that income, further reducing the potential for such deferral. When considering the treatment of CIVs that are not required to distribute income currently, countries may want to consider whether these or other factors address the concerns described in the preceding paragraph so that the type of limits described therein might not in fact be necessary.

4.4 Loss of preferential benefits

60. In most cases, it will be simpler to treat the CIV as a resident and the beneficial owner of the income it receives. Under this approach, the CIV would be entitled to the rates on income generally applicable to portfolio investors. This approach would provide for only one reduced withholding rate on dividends. However, there may be cases where countries would want to adopt a look-through approach with respect to the entire CIV or a class of interests in the CIV. This might be the case, for example, where pension funds are substantial investors in the CIV, since they might be entitled by treaty to a full exemption from source country tax on certain types of investment income.

61. In considering whether to adopt such a look-through approach, however, negotiators should pay particular attention to the types of vehicles to which the rules will apply. It is intended that the provisions included in the proposed Commentary that follows would apply only to CIVs as defined in paragraph 4, and therefore be limited to funds (including "funds of funds") that are widely-held, hold a diversified portfolio of securities and are subject to investor-protection regulation in the country in which they are established. It is appropriate to provide simplified methods for determining the ownership of these types of vehicles because of the difficulty in tracing investment income received by the CIV to specific investors. Where ownership in the vehicle is sufficiently stable to allow the custodian, manager or other fiduciary to credit specific income received by the vehicle to specific investors, it should also be possible to determine the extent to which those individual investors or classes of investors are entitled to treaty benefits. Where such tracing of specific income items to specific investors is clearly possible, it would be inappropriate to apply one of the less-targeted approaches provided in the proposed Commentary.

V. PROPOSED CHANGES TO THE COMMENTARY TO ADDRESS CIVS

62. The following proposed addition to the Commentary on Article 1 addresses the issues discussed in this Report. It begins with the conclusions from Section III regarding the application of current treaty rules to the specific case of CIVs. That is followed by a discussion of a number of optional provisions that could be adopted in new treaties to address the concerns discussed in Section IV. Because of the various factors and policy considerations discussed in Section IV, it is not possible to propose a single approach for the treatment of CIVs that could apply in all cases.

Add the following paragraphs 6.8 to 6.34 to the Commentary on Article 1 of the Model Tax Convention:

Cross-border issues relating to collective investment vehicles

6.8 Most countries have dealt with the domestic tax issues arising from groups of small investors who pool their funds in collective investment vehicles (CIVs). In general, the goal of such systems is to provide for neutrality between direct investments and investments through a CIV. Whilst those systems generally succeed when the investors, the CIV and the investment are all located in the same country, complications frequently arise when one or more of those parties or the investments are located in different countries. These complications are discussed in the report by the Committee on Fiscal Affairs entitled *The Granting of Treaty Benefits with Respect to the Income of Collective Investment Vehicles*,[8] the main conclusions of which have been incorporated below. For purposes of the Report and for this discussion, the term "CIV" is limited to funds that are widely-held, hold a diversified portfolio of securities and are subject to investor-protection regulation in the country in which they are established.

Application of the Convention to CIVs

6.9 The primary question that arises in the cross-border context is whether a CIV should qualify for the benefits of the Convention in its own right. In order to do so under treaties that, like the Convention, do not include a specific provision dealing with CIVs, a CIV would have to qualify as a "person" that is a "resident" of a Contracting State and, as regards the application of Articles 10 and 11, that is the "beneficial owner" of the income that it receives.

6.10 The determination of whether a CIV should be treated as a "person" begins with the legal form of the CIV, which differs substantially from country to country and between the various types of vehicles. In many countries, most CIVs take the form of a company. In others, the CIV typically would be a trust. In still others, many CIVs are simple contractual arrangements or a form of joint ownership. In most cases, the CIV would be treated as a taxpayer or a "person" for purposes of the tax law of the State in which it is established; for example, in some countries where the CIV is commonly established in the form of a trust, either the trust itself, or the trustees acting collectively in their capacity as such, is treated as a taxpayer or a person for domestic tax law purposes. In view of the wide meaning to be given to the term "person", the fact that the tax law of the country where such a CIV is established would treat it as a taxpayer would be indicative that the CIV is a "person" for treaty purposes. Contracting States wishing to expressly clarify that,

 MODEL TAX CONVENTION (FULL VERSION) – © OECD 2012

in these circumstances, such CIVs are persons for the purposes of their conventions may agree bilaterally to modify the definition of "person" to include them.

6.11 Whether a CIV is a "resident of a Contracting State" depends not on its legal form (as long as it qualifies as a person) but on its tax treatment in the State in which it is established. Although a consistent goal of domestic CIV regimes is to ensure that there is only one level of tax, at either the CIV or the investor level, there are a number of different ways in which States achieve that goal. In some States, the holders of interests in the CIV are liable to tax on the income received by the CIV, rather than the CIV itself being liable to tax on such income. Such a fiscally transparent CIV would not be treated as a resident of the Contracting State in which it is established because it is not liable to tax therein.

6.12 By contrast, in other States, a CIV is in principle liable to tax but its income may be fully exempt, for instance, if the CIV fulfils certain criteria with regard to its purpose, activities or operation, which may include requirements as to minimum distributions, its sources of income and sometimes its sectors of operation. More frequently, CIVs are subject to tax but the base for taxation is reduced, in a variety of different ways, by reference to distributions paid to investors. Deductions for distributions will usually mean that no tax is in fact paid. Other States tax CIVs but at a special low tax rate. Finally, some States tax CIVs fully but with integration at the investor level to avoid double taxation of the income of the CIV. For those countries that adopt the view, reflected in paragraph 8.5 of the Commentary on Article 4, that a person may be liable to tax even if the State in which it is established does not impose tax, the CIV would be treated as a resident of the State in which it is established in all of these cases because the CIV is subject to comprehensive taxation in that State. Even in the case where the income of the CIV is taxed at a zero rate, or is exempt from tax, the requirements to be treated as a resident may be met if the requirements to qualify for such lower rate or exemption are sufficiently stringent.

6.13 Those countries that adopt the alternative view, reflected in paragraph 8.6 of the Commentary on Article 4, that an entity that is exempt from tax therefore is not liable to tax may not view some or all of the CIVs described in the preceding paragraph as residents of the States in which they are established. States taking the latter view, and those States negotiating with such States, are encouraged to address the issue in their bilateral negotiations.

6.14 Some countries have questioned whether a CIV, even if it is a "person" and a "resident", can qualify as the beneficial owner of the income it receives. Because a "CIV" as defined in paragraph 6.8 above must be widely-held, hold a diversified portfolio of securities and be subject to investor-protection regulation in the country in which it is established, such a CIV, or its managers, often perform significant functions with respect to the investment and management of the assets of the CIV. Moreover, the position of an investor in a CIV differs substantially, as a legal and economic matter, from the position of an investor who owns the underlying assets, so that it would not be appropriate to treat the investor in such a CIV as the beneficial owner of the income received by the CIV. Accordingly, a vehicle that meets the definition of a widely-held CIV will also be treated as the beneficial owner of the dividends and interest that it receives, so long as the managers of the CIV have discretionary powers to manage the assets generating such income (unless an individual who is a resident of that State who would have received the income in the same circumstances would not have been considered to be the beneficial owner thereof).

6.15 Because these principles are necessarily general, their application to a particular type of CIV might not be clear to the CIV, investors and intermediaries. Any uncertainty regarding treaty eligibility is especially problematic for a CIV, which must take into account amounts expected to be received, including any withholding tax benefits provided by treaty, when it calculates its net asset value ("NAV"). The NAV, which typically is calculated daily, is the basis for the prices used for subscriptions and redemptions. If the withholding tax benefits ultimately obtained by the CIV do not correspond to its original assumptions about the amount and timing of such withholding tax benefits, there will be a discrepancy between the real asset value and the NAV used by investors who have purchased, sold or redeemed their interests in the CIV in the interim.

6.16 In order to provide more certainty under existing treaties, tax authorities may want to reach a mutual agreement clarifying the treatment of some types of CIVs in their respective States. With respect to some types of CIVs, such a mutual agreement might simply confirm that the CIV satisfies the technical requirements discussed above and therefore is entitled to benefits in its own right. In other cases, the mutual agreement could provide a CIV an administratively feasible way to make claims with respect to treaty-eligible investors. See paragraphs 36 to 40 of the report on *The Granting of Treaty Benefits to Income Earned by Collective Investment Vehicles* for a discussion of this issue. Of course, a mutual agreement could not cut back on benefits that otherwise would be available to the CIV under the terms of a treaty.

Policy issues raised by the current treatment of collective investment vehicles

6.17 The same considerations would suggest that treaty negotiators address expressly the treatment of CIVs. Thus, even if it appears that CIVs in each of the Contracting States would be entitled to benefits, it may be appropriate to confirm that position publicly (for example, through an exchange of notes) in order to provide certainty. It may also be appropriate to expressly provide for the treaty entitlement of CIVs by including, for example, a provision along the following lines:

> Notwithstanding the other provisions of this Convention, a collective investment vehicle which is established in a Contracting State and which receives income arising in the other Contracting State shall be treated for purposes of applying the Convention to such income as an individual that is a resident of the Contracting State in which it is established and as the beneficial owner of the income it receives (provided that, if an individual who is a resident of the first-mentioned State had received the income in the same circumstances, such individual would have been considered to be the beneficial owner thereof). For purposes of this paragraph, the term "collective investment vehicle" means, in the case of [the first Contracting State], a [ ] and, in the case of [the other Contracting State], a [ ], as well as any other investment fund, arrangement or entity established in either Contracting State which the competent authorities of the Contracting States agree to regard as a collective investment vehicle for purposes of this paragraph.

6.18 However, in negotiating new treaties or amendments to existing treaties, the Contracting States would not be restricted to clarifying the results of the application of other treaty provisions to CIVs, but could vary those results to the extent necessary to achieve policy objectives. For example, in the context of a particular bilateral treaty, the technical analysis may result in CIVs located in one of the Contracting States qualifying for benefits, whilst CIVs in the other Contracting State may not. This may make the treaty appear unbalanced, although whether it is so in fact will depend on the specific circumstances. If it is, then the Contracting States should attempt to reach an equitable solution. If the practical result in each of the Contracting States is that most CIVs do not in fact pay tax, then the Contracting States should attempt to overcome differences in legal form that might otherwise cause those in one State to qualify for benefits and those in the other to be denied benefits. On the other hand, the differences in legal form and tax treatment in the two Contracting States may mean that it is appropriate to treat CIVs in the two States differently. In comparing the taxation of CIVs in the two States, taxation in the source State and at the investor level should be

considered, not just the taxation of the CIV itself. The goal is to achieve neutrality between a direct investment and an investment through a CIV in the international context, just as the goal of most domestic provisions addressing the treatment of CIVs is to achieve such neutrality in the wholly domestic context.

6.19 A Contracting State may also want to consider whether existing treaty provisions are sufficient to prevent CIVs from being used in a potentially abusive manner. It is possible that a CIV could satisfy all of the requirements to claim treaty benefits in its own right, even though its income is not subject to much, if any, tax in practice. In that case, the CIV could present the opportunity for residents of third countries to receive treaty benefits that would not have been available had they invested directly. Accordingly, it may be appropriate to restrict benefits that might otherwise be available to such a CIV, either through generally applicable anti-abuse or anti-treaty shopping rules (as discussed under "Improper use of the Convention" below) or through a specific provision dealing with CIVs.

6.20 In deciding whether such a provision is necessary, Contracting States will want to consider the economic characteristics, including the potential for treaty shopping, presented by the various types of CIVs that are prevalent in each of the Contracting States. For example, a CIV that is not subject to any taxation in the State in which it is established may present more of a danger of treaty shopping than one in which the CIV itself is subject to an entity-level tax or where distributions to non-resident investors are subject to withholding tax.

Possible provisions modifying the treatment of CIVs

6.21 Where the Contracting States have agreed that a specific provision dealing with CIVs is necessary to address the concerns described in paragraphs 6.18 through 6.20, they could include in the bilateral treaty the following provision:

a) Notwithstanding the other provisions of this Convention, a collective investment vehicle which is established in a Contracting State and which receives income arising in the other Contracting State shall be treated for purposes of applying the Convention to such income as an individual who is a resident of the Contracting State in which it is established and as the beneficial owner of the income it receives (provided that, if an individual who is a resident of the first-mentioned State had received the income in the same circumstances, such individual would have been considered to be the beneficial owner thereof),

but only to the extent that the beneficial interests in the collective investment vehicle are owned by equivalent beneficiaries.

b) For purposes of this paragraph:

(*i*) the term "collective investment vehicle" means, in the case of [the first Contracting State], a [ ] and, in the case of [the other Contracting State], a [ ], as well as any other investment fund, arrangement or entity established in either Contracting State which the competent authorities of the Contracting States agree to regard as a collective investment vehicle for purposes of this paragraph; and

(*ii*) the term "equivalent beneficiary" means a resident of the Contracting State in which the CIV is established, and a resident of any other State with which the Contracting State in which the income arises has an income tax convention that provides for effective and comprehensive information exchange who would, if he received the particular item of income for which benefits are being claimed under this Convention, be entitled under that convention, or under the domestic law of the Contracting State in which the income arises, to a rate of tax with respect to that item of income that is at least as low as the rate claimed under this Convention by the CIV with respect to that item of income.

6.22 It is intended that the Contracting States would provide in clause (*b*)(*i*) specific cross-references to relevant tax or securities law provisions relating to CIVs. In deciding which treatment should apply with respect to particular CIVs, Contracting States should take into account the policy considerations discussed above. Negotiators may agree that economic differences in the treatment of CIVs in the two Contracting States, or even within the same Contracting State, justify differential treatment in the tax treaty. In that case, some combination of the provisions in this section might be included in the treaty.

6.23 The effect of allowing benefits to the CIV to the extent that it is owned by "equivalent beneficiaries" as defined in clause (*b*)(*ii*) is to ensure that investors who would have been entitled to benefits with respect to income derived from the source State had they received the income directly are not put in a worse position by investing through a CIV located in a third country. The approach thus serves the goals of neutrality as between direct investments and investments through a CIV. It also decreases the risk of double taxation as between the source State and the State of residence of the investor, to the extent that there is a tax treaty between them. It is beneficial for investors, particularly those

from small countries, who will consequently enjoy a greater choice of investment vehicles. It also increases economies of scale, which are a primary economic benefit of investing through CIVs. Finally, adopting this approach substantially simplifies compliance procedures. In many cases, nearly all of a CIV's investors will be "equivalent beneficiaries", given the extent of bilateral treaty coverage and the fact that rates in those treaties are nearly always 10-15% on portfolio dividends.

6.24 At the same time, the provision prevents a CIV from being used by investors to achieve a better tax treaty position than they would have achieved by investing directly. This is achieved through the rate comparison in the definition of "equivalent beneficiary". Accordingly, the appropriate comparison is between the rate claimed by the CIV and the rate that the investor could have claimed had it received the income directly. For example, assume that a CIV established in Country B receives dividends from a company resident in Country A. Sixty-five per cent of the investors in the CIV are individual residents of Country B; ten per cent are pension funds established in Country C and 25 percent are individual residents of Country C. Under the A-B tax treaty, portfolio dividends are subject to a maximum tax rate at source of 10%. Under the A-C tax treaty, pension funds are exempt from taxation in the source country and other portfolio dividends are subject to tax at a maximum tax rate of 15%. Both the A-B and A-C treaties include effective and comprehensive information exchange provisions. On these facts, 75% of the investors in the CIV – the individual residents of Country B and the pension funds established in Country C – are equivalent beneficiaries.

6.25 A source State may also be concerned about the potential deferral of taxation that could arise with respect to a CIV that is subject to no or low taxation and that may accumulate its income rather than distributing it on a current basis. Such States may be tempted to limit benefits to the CIV to the proportion of the CIV's investors who are currently taxable on their share of the income of the CIV. However, such an approach has proven difficult to apply to widely-held CIVs in practice. Those countries that are concerned about the possibility of such deferral may wish to negotiate provisions that extend benefits only to those CIVs that are required to distribute earnings currently. Other States may be less concerned about the potential for deferral, however. They may take the view that, even if the investor is not taxed currently on the income received by the CIV, it will be taxed eventually, either on the distribution, or on any capital gains if it sells its interest in the CIV before the CIV distributes the income. Those countries may wish to negotiate provisions that grant benefits to CIVs even if they are not obliged to

distribute their income on a current basis. Moreover, in many countries, the tax rate with respect to investment income is not significantly higher than the treaty withholding rate on dividends, so there would be little if any residence-country tax deferral to be achieved by earning such income through an investment fund rather than directly. In addition, many countries have taken steps to ensure the current taxation of investment income earned by their residents through investment funds, regardless of whether the funds accumulate that income, further reducing the potential for such deferral. When considering the treatment of CIVs that are not required to distribute income currently, countries may want to consider whether these or other factors address the concerns described above so that the type of limits described herein might not in fact be necessary.

6.26 Some States believe that taking all treaty-eligible investors, including those in third States, into account would change the bilateral nature of tax treaties. These States may prefer to allow treaty benefits to a CIV only to the extent that the investors in the CIV are residents of the Contracting State in which the CIV is established. In that case, the provision would be drafted as follows:

a) Notwithstanding the other provisions of this Convention, a collective investment vehicle which is established in a Contracting State and which receives income arising in the other Contracting State shall be treated for purposes of applying the Convention to such income as an individual who is a resident of the Contracting State in which it is established and as the beneficial owner of the income it receives (provided that, if an individual who is a resident of the first-mentioned State had received the income in the same circumstances, such individual would have been considered to be the beneficial owner thereof), but only to the extent that the beneficial interests in the collective investment vehicle are owned by residents of the Contracting State in which the collective investment vehicle is established.

b) For purposes of this paragraph, the term "collective investment vehicle" means, in the case of [the first Contracting State], a [ ] and, in the case of [the other Contracting State], a [ ], as well as any other investment fund, arrangement or entity established in either Contracting State which the competent authorities of the Contracting States agree to regard as a collective investment vehicle for purposes of this paragraph.

6.27 Although the purely proportionate approach set out in paragraphs 6.21 and 6.26 protects against treaty shopping, it may also

impose substantial administrative burdens as a CIV attempts to determine the treaty entitlement of every single investor. A Contracting State may decide that the fact that a substantial proportion of the CIV's investors are treaty-eligible is adequate protection against treaty shopping, and thus that it is appropriate to provide an ownership threshold above which benefits would be provided with respect to all income received by the CIV. Including such a threshold would also mitigate some of the procedural burdens that otherwise might arise. If desired, therefore, the following sentence could be added at the end of subparagraph *a*):

> However, if at least [ ] per cent of the beneficial interests in the collective investment vehicle are owned by [equivalent beneficiaries][residents of the Contracting State in which the collective investment vehicle is established], the collective investment vehicle shall be treated as an individual who is a resident of the Contracting State in which it is established and as the beneficial owner of all of the income it receives (provided that, if an individual who is a resident of the first-mentioned State had received the income in the same circumstances, such individual would have been considered to be the beneficial owner thereof).

6.28 In some cases, the Contracting States might wish to take a different approach from that put forward in paragraphs 6.17, 6.21 and 6.26 with respect to certain types of CIVs and to treat the CIV as making claims on behalf of the investors rather than in its own name. This might be true, for example, if a large percentage of the owners of interests in the CIV as a whole, or of a class of interests in the CIV, are pension funds that are exempt from tax in the source country under terms of the relevant treaty similar to those described in paragraph 69 of the Commentary on Article 18 (Pensions). To ensure that the investors would not lose the benefit of the preferential rates to which they would have been entitled had they invested directly, the Contracting States might agree to a provision along the following lines with respect to such CIVs (although likely adopting one of the approaches of paragraph 6.17, 6.21 or 6.26 with respect to other types of CIVs):

> *a*) A collective investment vehicle described in subparagraph c) which is established in a Contracting State and which receives income arising in the other Contracting State shall not be treated as a resident of the Contracting State in which it is established, but may claim, on behalf of the owners of the beneficial interests in the collective investment vehicle, the tax reductions, exemptions or other benefits that would have been available

under this Convention to such owners had they received such income directly.

b) A collective investment vehicle may not make a claim under subparagraph a) for benefits on behalf of any owner of the beneficial interests in such collective investment vehicle if the owner has itself made an individual claim for benefits with respect to income received by the collective investment vehicle.

c) This paragraph shall apply with respect to, in the case of [the first Contracting State], a [ ] and, in the case of [the other Contracting State], a [ ], as well as any other investment fund, arrangement or entity established in either Contracting State to which the competent authorities of the Contracting States agree to apply this paragraph.

This provision would, however, limit the CIV to making claims on behalf of residents of the same Contracting State in which the CIV is established. If, for the reasons described in paragraph 6.23, the Contracting States deemed it desirable to allow the CIV to make claims on behalf of treaty-eligible residents of third States, that could be accomplished by replacing the words "this Convention" with "any Convention to which the other Contracting State is a party" in subparagraph *a*). If, as anticipated, the Contracting States would agree that the treatment provided in this paragraph would apply only to specific types of CIVs, it would be necessary to ensure that the types of CIVs listed in subparagraph *c*) did not include any of the types of CIVs listed in a more general provision such as that in paragraph 6.17, 6.21 or 6.26 so that the treatment of a specific type of CIV would be fixed, rather than elective. Countries wishing to allow individual CIVs to elect their treatment, either with respect to the CIV as a whole or with respect to one or more classes of interests in the CIV, are free to modify the paragraph to do so.

6.29 Under either the approach in paragraphs 6.21 and 6.26 or in paragraph 6.28, it will be necessary for the CIV to make a determination regarding the proportion of holders of interests who would have been entitled to benefits had they invested directly. Because ownership of interests in CIVs changes regularly, and such interests frequently are held through intermediaries, the CIV and its managers often do not themselves know the names and treaty status of the beneficial owners of interests. It would be impractical for the CIV to collect such information from the relevant intermediaries on a daily basis. Accordingly, Contracting States should be willing to accept practical and reliable approaches that do not require such daily tracing.

6.30 For example, in many countries the CIV industry is largely domestic, with an overwhelming percentage of investors resident in the country in which the CIV is established. In some cases, tax rules discourage foreign investment by imposing a withholding tax on distributions, or securities laws may severely restrict offerings to non-residents. Governments should consider whether these or other circumstances provide adequate protection against investment by non-treaty-eligible residents of third countries. It may be appropriate, for example, to assume that a CIV is owned by residents of the State in which it is established if the CIV has limited distribution of its shares or units to the State in which the CIV is established or to other States that provide for similar benefits in their treaties with the source State.

6.31 In other cases, interests in the CIV are offered to investors in many countries. Although the identity of individual investors will change daily, the proportion of investors in the CIV that are treaty-entitled is likely to change relatively slowly. Accordingly, it would be a reasonable approach to require the CIV to collect from other intermediaries, on specified dates, information enabling the CIV to determine the proportion of investors that are treaty-entitled. This information could be required at the end of a calendar or fiscal year or, if market conditions suggest that turnover in ownership is high, it could be required more frequently, although no more often than the end of each calendar quarter. The CIV could then make a claim on the basis of an average of those amounts over an agreed-upon time period. In adopting such procedures, care would have to be taken in choosing the measurement dates to ensure that the CIV would have enough time to update the information that it provides to other payors so that the correct amount is withheld at the beginning of each relevant period.

6.32 An alternative approach would provide that a CIV that is publicly traded in the Contracting State in which it is established will be entitled to treaty benefits without regard to the residence of its investors. This provision has been justified on the basis that a publicly-traded CIV cannot be used effectively for treaty shopping because the shareholders or unitholders of such a CIV cannot individually exercise control over it. Such a provision could read:

a) Notwithstanding the other provisions of this Convention, a collective investment vehicle which is established in a Contracting State and which receives income arising in the other Contracting State shall be treated for purposes of applying the Convention to such income as an individual who is a resident of the Contracting State in which it is established and as the beneficial owner of the income it receives (provided that, if an

individual who is a resident of the first-mentioned State had received the income in the same circumstances, such individual would have been considered to be the beneficial owner thereof), if the principal class of shares or units in the collective investment vehicle is listed and regularly traded on a regulated stock exchange in that State.

b) For purposes of this paragraph, the term “collective investment vehicle” means, in the case of [the first Contracting State], a [ ] and, in the case of [the other Contracting State], a [ ], as well as any other investment fund, arrangement or entity established in either Contracting State which the competent authorities of the Contracting States agree to regard as a collective investment vehicle for purposes of this paragraph.

6.33 Each of the provisions in paragraphs 6.17, 6.21, 6.26 and 6.32 treats the CIV as the resident and the beneficial owner of the income it receives for the purposes of the application of the Convention to such income, which has the simplicity of providing for one reduced rate of withholding with respect to each type of income. These provisions should not be construed, however, as restricting in any way the right of the State of source from taxing its own residents who are investors in the CIV. Clearly, these provisions are intended to deal with the source taxation of the CIV’s income and not the residence taxation of its investors (this conclusion is analogous to the one put forward in paragraph 6.1 above as regards partnerships). States that wish to confirm this point in the text of the provisions are free to amend the provisions accordingly, which could be done by adding the following sentence: “This provision shall not be construed as restricting in any way a Contracting State’s right to tax the residents of that State”.

6.34 Also, each of these provisions is intended only to provide that the specific characteristics of the CIV will not cause it to be treated as other than the beneficial owner of the income it receives. Therefore, a CIV will be treated as the beneficial owner of all of the income it receives. The provision is not intended, however, to put a CIV in a different or better position than other investors with respect to aspects of the beneficial ownership requirement that are unrelated to the CIV’s status as such. Accordingly, where an individual receiving an item of income in certain circumstances would not be considered as the beneficial owner of that income, a CIV receiving that income in the same circumstances could not be deemed to be the beneficial owner of the income. This result is confirmed by the parenthetical limiting the application of the provision to situations in which an individual in the same circumstances would have been treated as the beneficial owner of the income.

Notes

1. These figures do not take account of amounts held through private equity funds or hedge funds. ICI 2009 Fact Book, *www.icifactbook.org/pdf/09_fb_table58.pdf*.
2. Hereafter, the term "adviser" will be used to describe the person with portfolio-manager responsibilities, whether that person is the manager or a sub-adviser.

APPENDIX II

RECOMMENDATION OF THE OECD COUNCIL CONCERNING THE MODEL TAX CONVENTION ON INCOME AND ON CAPITAL

(Adopted by the Council on 23 October 1997)

THE COUNCIL,

Having regard to Article 5(b) of the Convention on the Organisation for Economic Co-operation and Development of the 14 December 1960;

Having regard to the Recommendation of the Council dated 31 March 1994 concerning the Model Tax Convention on Income and Capital [C(94)11/FINAL] and the Recommendation of the Council dated 21 September 1995 amending the Appendix to that previous Recommendation [C(95)132/FINAL];

Having regard to the Report of the Committee on Fiscal Affairs of 24 June 1997 entitled "The 1997 Update to the Model Tax Convention" [DAFFE/CFA/WP1(97)10/REV2] (hereinafter referred to as "the 1997 Report");

Considering the need to remove the obstacles that international juridical double taxation presents to the free movement of goods, services, capital, and persons between countries by the conclusion of conventions for that purpose;

Considering also the need to harmonise existing bilateral conventions on the basis of uniform principles, definitions, rules, and methods and to extend the existing network of such conventions to all member countries and where appropriate to non-member countries;

Considering further the need to encourage the common application and interpretation of the provisions of tax conventions that are based on those of the Model Tax Convention on Income and on Capital (hereinafter referred to as the "Model Tax Convention");

Considering that efforts made in this direction by member countries have already produced substantial results and that the proposed revisions to the Model Tax Convention will make it possible to confirm and extend existing international co-operation on tax matters;

Taking note of the Model Tax Convention and the Commentaries thereon (as last modified by the 1997 Report), which may be amended from time to time hereafter;

I. RECOMMENDS the Governments of member countries:

1. to pursue their efforts to conclude bilateral tax conventions on income and on capital with those member countries, and where appropriate with non-member countries, with which they have not yet entered into such conventions, and to revise those of the existing conventions that may no longer reflect present-day needs;
2. when concluding new bilateral conventions or revising existing bilateral conventions, to conform to the Model Tax Convention, as interpreted by the Commentaries thereon;
3. that their tax administrations follow the Commentaries on the Articles of the Model Tax Convention, as modified from time to time,

when applying and interpreting the provisions of their bilateral tax conventions that are based on these Articles.

II. INVITES the Governments of member countries to continue to notify the Committee on Fiscal Affairs of their reservations on the Articles and observations on the Commentaries.

III. INSTRUCTS the Committee on Fiscal Affairs to continue its ongoing review of situations where the provisions set out in the Model Tax Convention or the Commentaries thereon may require modification in the light of experience gained by member countries, and to make appropriate proposals for periodic updates.

IV. DECIDES to repeal the Recommendations of the Council C(94)11/FINAL (31 March 1994) and C(95)132/FINAL (21 September 1995).

ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT

The OECD is a unique forum where governments work together to address the economic, social and environmental challenges of globalisation. The OECD is also at the forefront of efforts to understand and to help governments respond to new developments and concerns, such as corporate governance, the information economy and the challenges of an ageing population. The Organisation provides a setting where governments can compare policy experiences, seek answers to common problems, identify good practice and work to co-ordinate domestic and international policies.

The OECD member countries are: Australia, Austria, Belgium, Canada, Chile, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Japan, Korea, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, the Slovak Republic, Slovenia, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The European Union takes part in the work of the OECD.

OECD Publishing disseminates widely the results of the Organisation's statistics gathering and research on economic, social and environmental issues, as well as the conventions, guidelines and standards agreed by its members.

Model Tax Convention on Income and on Capital

FULI VERSION

This publication is the eighth edition of the full version of the OECD *Model Tax Convention on Income and on Capital*. This full version contains the full text of the *Model Tax Convention on Income and on Capital* as it read on 22 July 2010, including the Articles, Commentaries, non-OECD economies' positions, the Recommendation of the OECD Council, the historical notes (now expanded to go back to 1963), the detailed list of conventions between OECD member countries and the background reports. This edition of the full version is the first to be published in book form. The previous loose-leaf edition has been discontinued.

The full version of the *OECD Model Tax Convention* is published regularly to reflect updates. The full version is also available electronically. This electronic version includes such features as extensive internal linking, making it easy to link from an article to its commentary; fast searching capabilities; the ability for the user to attach notes to specific areas of text and cut and paste capabilities. The condensed version 2010, previously published and also available, includes only the Articles, Commentaries, non-OECD economies' positions and the Recommendation of the OECD Council.
